2 Notes:

A. Project Gross Plant is the total capital investment for the project calculated in the same method as the gross plant value in line 1.

This value includes subsequent capital investments required to maintain the facilities to their original capabilities.

Gross Plant does not include CWIP, Unamortized Regulatory Asset or Unamortized Abandoned Plant.

B. Net Plant is the Gross Plant less the associated Accumulated Depreciation.

C. Depreciation Expense is the depreciation amount associated with the specified line or sub.

Depreciation Expense includes the amortization of Abandoned Plant and any FERC approved Regulatory Asset.

D. The addition of new lines and the removal of outdated lines may be necessary in order to accurately provide information, and populate or remove data in the Worksheet with changes in future years. Where appropriate, these changes will provide detail and linkage to updated Form 7 data requirements or other similar supporting documentation. Additional line items or line deletions will not require FPA Section 205 or 206 filings. PEC will describe such changes in the Annual Update, and the changes will be subject to the review of Interested Parties

under the procedures set forth in PEC's Implementation Protocols. PEC may not change the columns or the formulas included in these Worksheets during the Annual Update.

32 the Annual Update.

# People's Electric Cooperative

## Transmission Formula Rate Implementation Protocols

The transmission formula rate template ("Formula Rate Template") of People's Electric Cooperative ("PEC") and these Transmission Formula Rate Implementation Protocols ("Protocols") together comprise the filed rate ("Formula Rate") of PEC for transmission service in Zones 7, 10, and 13 of the Southwest Power Pool, Inc. ("SPP") footprint. PEC must follow the instructions specified in the Formula Rate to calculate its Annual Transmission Revenue Requirements ("ATRR") and the rates for Network Integration Transmission Service ("NITS") and Point-to-Point Transmission Service.

Recovery of costs associated with existing and new facilities shall be consistent with the Formula Rate and the SPP Tariff. The ATRR shall be determined for January 1 to December 31 of a given calendar year. The Formula Rate shall become effective for recovery of PEC ATRR upon the effective date authorized by the Federal Energy Regulatory Commission ("FERC") under Section 205 of the Federal Power Act ("FPA").

The Formula Rate shall be applicable to service on and after July 1 of each calendar year through June 30 of the following calendar year ("Rate Year"), subject to review, challenge and refunds or surcharges with interest, to the extent provided herein.

### Section I Definitions

For purposes of these Protocols, the following capitalized terms shall have the meanings set forth below.

(a) "Accounting Change" means any change in PEC accounting policies and practices from those in effect for the Calendar Year upon which the immediately preceding Annual Update was based and that could impact the ATRR calculations under the Formula Rate. Accounting Changes include any changes resulting from:

(i) revisions to FERC's Uniform System of Accounts ("USoA"); (ii) revisions to CFC Form 7 data and the requirement to report certain values within it; (iii) correction of errors and prior period adjustments that impact the ATRR; (iv) the implementation of new estimation methods or policies; (v) changes to income tax elections; (vi) changes in accounting practices or policies mandated by FERC or a state regulatory authority with jurisdiction over PEC that could impact the Formula Rate or calculations under the Formula Rate; (vii) implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction; (viii) a change in PEC accounting policies and practices (as such changes are defined by the Statement of Financial Accounting Board Standards No. 154 issued by the Financial Accounting Standards Board or its successor); (ix) PEC's own Accounting Changes (which constitute a change to the ATRR greater than or equal to $10,000) such as the addition or deletion of a subaccount not

specified by FERC's USoA; or (x) a change in PEC's inter-corporate cost allocation policies or practices from those policies and/or practices in effect in the Prior Rate Year, which change causes a result under the Formula Rate different than the result under the Formula Rate as calculated without such change.

(b) "Annual Transmission Revenue Requirement" or "ATRR" means the net revenue requirement for the Transmission Services calculated in accordance with the Formula Rate filed by PEC for informational purposes with FERC and posted on the SPP OASIS on or before the annual Publication Date, subject to review pursuant to the provisions of these Protocols.

(c) "Annual Meeting" means the meeting hosted by PEC for the purpose of exchanging information with Interested Parties regarding the Formula Rate.

(d) "Annual Update" means PEC's annual filing of its Formula Rate, in a working Excel™ format. The Annual Update is submitted as described in these Protocols.

(e) "Business Day" means from 9:00 AM to 5:00 PM Central Prevailing Time other than weekends and Federal Holidays.

(f) "Calendar Year" means January 1 through December 31 of a given year.

(g) "CFC" means National Rural Utilities Cooperative Finance Corporation.

(h) "Current Rate Year" means the Rate Year for which the Annual Update is posted on the SPP OASIS (*e.g.*, if the Annual Update is filed on April 15, 2021, the Current Rate Year is July 1, 2021 through June 30, 2022).

(i) "Customer(s)" or "Transmission Customer(s)" means the customers taking NITS service, service under Grandfathered Agreements, or PTP Service.

(j) "FERC" or "Commission" means the Federal Energy Regulatory Commission.

(k) "Final Posting" means the Annual Update information which PEC requests that SPP post to the SPP OASIS with changes agreed to during the Review Period.

(l) "Formal Challenge" means a challenge by an Interested Party to an aspect of the Annual Update that is filed with FERC and served on PEC by electronic service on the date of such filing.

(m) "Formula Rate" has the meaning defined herein.

(n) "FPA" means Federal Power Act.

(o) "Grandfathered Agreement" has the meaning set forth in the SPP Tariff.

(p) "Informal Challenge" means written notification by an Interested Party to PEC of any specific challenge to the Annual Update.

(q) "Information Request" means a written request submitted by an Interested Party to PEC.

(r) "Informational Filing" means PEC's annual filing at the Commission with the information stipulated in these Protocols.

(s) "Interest" means interest calculated pursuant to 18 C.F.R. § 35.19(a) or successor regulation.

(t) "Interested Party" includes but is not limited to, Customers under the SPP Tariff, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general.

(u) "NITS" means Network Integration Transmission Service as defined in the SPP Tariff.

(v) "OASIS" means Open Access Same-Time Information System.

(w) "OATT" or "SPP Tariff" means SPP's Open Access Transmission Tariff.

(x) "Prior Rate Year" means the Rate Year prior to the Current Rate Year (*e.g.*, if the Current Rate Year is July 1, 2021 through June 30, 2022, then the Prior Rate Year is July 1, 2020 through June 30, 2021).

(y) "PTP Rates" means the point-to-point rates derived from the Formula Rate.

(z) "PTP Service" means "Point-To-Point Transmission Service" as defined in the SPP Tariff.

(aa) "Publication Date" means the date on which PEC posts the Annual Update to the SPP OASIS. The Publication Date for each year beginning in 2021 shall be no later than April 15, provided, however, that if April 15 should fall on a weekend or a holiday recognized by FERC, then the posting shall be due no later than the next Business Day, and the Publication Date shall correspond to the actual posting date.

(bb) "Rate Year" means July 1 of a given year through June 30 of the subsequent year. (cc)

"Review Period" means unless otherwise extended in writing by PEC, 60 days after the Publication Date.

(dd) "Stated Values" mean values that are fixed and not subject to change in an Annual Update. Stated Values include: (i) the authorized return on equity ("ROE"); (ii) depreciation and amortization rates; and (iii) other similar fixed values. Stated Values may be changed only pursuant to FPA Sections 205 or 206.

(ee) "USoA" means FERC's Uniform System of Accounts.

**Section II Annual Update**

A. On or before the Publication Date for each calendar year, PEC shall:

1. Prepare its Annual Update by recalculating the revenue requirements applicable to Network Integration Transmission Service for the new Rate Year in accordance with the Formula Rate; and

2. Provide its Annual Update to SPP and request that SPP post such information to the SPP OASIS (such posting, the "Initial Posting"); and

3. If the date for posting the Annual Update falls on a weekend or a holiday recognized by FERC, then the Initial Posting shall be due on the next Business Day. The date on which such posting occurs shall be that year's Publication Date. Any delay in the Publication Date shall result in an equivalent extension of time for the submission of Information Requests.

B. Concurrent with the Initial Posting, PEC shall provide the Annual Update to SPP to serve electronically upon the Formula Rate Posting Information Notification List.[1]

C. The Annual Update shall:

1. Include a workable populated Formula Rate Template with fully functional spreadsheets showing the calculation of the Annual Update and underlying work papers in native format with links and formulas intact, including sufficiently detailed work papers and supporting documentation for data;

2. Be based on the independently-audited books and records of PEC for the most recent fiscal year including its certified CFC Form 7 or successor reports used by PEC;

---

1 As used in these Protocols, "Formula Rate Posting Information Notification List" shall mean the list of email addresses maintained by SPP of Interested Parties, provided that such Interested Parties request to be added to the Formula Rate Posting Information Notification List through the "Exploder List" link on the SPP website. As of September 2020, the Exploder List was titled "Formula Rate Posting Information Notification" and could be accessed at http://www.spp.org/ stakeholder-center/exploder-lists/. Interested Parties may include (i) SPP Tariff "Transmission Customers" (as defined in the SPP Tariff); (ii) any state regulatory agency with rate jurisdiction over a public utility located within the SPP footprint; and (iii) any consumer advocate agency authorized by state law to review and contest the rates for any such public utility.

3. Provide sufficient information to enable Interested Parties to replicate the calculation of the formula results from the Formula Rate;

4. With respect to any change in accounting that affects the inputs to the Formula Rate or the resulting charges billed under the Formula Rate, PEC shall identify:

(a) Any Accounting Changes, such as the initial implementation of an accounting standard or policy; the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific direction; or the correction of errors and prior period adjustments that impact the ATRR;

(b) Any items included in the Formula Rate at an amount other than a historic cost basis;

(c) Individual impact of any changes in 4 ( a) above on charges billed under the Formula Rate; and

(d) Accounting Changes related to any reorganization or merger transaction.

5. Not seek to modify the Formula Rate, as any modification to the Formula Rate will require filing under Section 205 or 206 of the FPA.

**Section III Review of Annual Update**

Within twenty (20) days of the posting of PEC's Annual Update, PEC will host an Annual Meeting for Interested Parties to discuss the Annual Update. PEC shall provide notice of the Annual Meeting concurrent with the posting of the Annual Update accessible on the SPP OASIS. The notice shall include the date, time and location of the Annual Meeting and also shall be provided to Interested Parties through the Formula Rate Posting Information Notification List. The Annual Meeting shall also be available by telephone and/or web access with all meeting materials provided electronically.

A. Information Exchange

1. Interested Parties may begin submitting Information Requests immediately following the Publication Date of the Annual Update and will have until sixty (60) days after the Publication Date to serve reasonable Information Requests on PEC for information and work papers supporting the Annual Update. Such

Information Requests submitted during the Review Period shall be limited to that what is necessary to determine:

(a) The extent or effect of an Accounting Change;

(b) Whether the Annual Update fails to include data properly recorded in accordance with the Protocols and the accuracy and consistency of data;

(c) The proper application of the Formula Rate and procedures in these Protocols;

(d) The accuracy of data and consistency with the Formula Rate of the calculation shown in the Annual Update;

(e) The prudence of actual costs and expenditures, including information on procurement methods and cost control methodologies;

(f) The effect of any change to the underlying USoA or Formula Rate Template; or

(g) Any other information that may reasonably have a substantive effect on the calculation of the charges pursuant to the Formula Rate.

The information and document requests shall not otherwise be directed to ascertain whether the Formula Rate is just and reasonable. PEC will not claim that responses to information and document requests pursuant the Protocols are subject to any settlement confidentiality provision however, PEC may require that Interested Parties execute a non- disclosure agreement to obtain access to material that PEC deems commercially sensitive or that contains " Critical Energy Infrastructure Information" as that term is defined in 18 C.F.R. § 388.113(c)(1).

2. PEC shall make a good faith effort to respond to Information Requests pertaining to the Annual Update within seven (7) Business Days

3. PEC shall request to be posted on a publicly accessible portion of the SPP OASIS all Information Requests from Interested Parties and PEC response(s) to such requests, and a link to the posting will be electronically served on all Interested Parties via the Formula Rate Posting Information Notification List. If responses to Information Requests contain information deemed by PEC to be

confidential, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement executed by the requesting party and PEC.

4. If the deadline for Interested Parties falls on a weekend or holiday recognized by the Commission the deadline will be extended to the next Business Day.

B. Informal Challenge Procedures

1. Interested Parties shall have until June 15 (or the first Business Day after June 15 if June 15 falls on a weekend or holiday) to notify PEC in writing (which may be electronically) of any specific Informal Challenges. The Informal Challenge must specify the inputs, supporting explanations, allocations calculations, or other information to which the Interested Party objects and provide an appropriate explanation and documents to support its Informal Challenge. PEC will make a good faith effort to respond to any Informal Challenge within twenty (20) days of notification of such Informal Challenge. PEC shall appoint senior representatives to work with the Interested Party to resolve the Informal Challenge.

2. PEC will request that SPP post on the SPP OASIS all Informal Challenges from Interested Parties and PEC's responses to the Informal Challenges and a link to the posting will be electronically served on all Interested Parties via the Formula Rate Posting Information Notification List. If responses to Informal Challenges contain information deemed by PEC to be confidential, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement executed by the requesting party and PEC.

3. Any changes or adjustments to the Annual Update resulting from the Information Exchange and Informal Challenge procedures that are agreed to by PEC and resolved prior to the end of the Review Period shall be reported in the Final Posting on the SPP OASIS. Any changes or adjustments agreed to by PEC after this date will be reported in the Informational Filing made with FERC and will be reflected in the Annual Update for the following Rate Year.

C. Formal Challenges

1. A Formal Challenge shall:

(a) Clearly identify the action or inaction which is alleged to violate the filed Formula Rate or Protocols;

(b) Explain how the action or inaction violates the filed Formula Rate or Protocols;

(c) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

i. The extent or effect of an Accounting Change;

ii. Whether the Annual Update fails to include data properly recorded in accordance with the Protocols and the accuracy and consistency of data;

iii. The proper application of the Formula Rate and procedures in these Protocols;

iv. The accuracy of data and consistency with the Formula Rate of the calculation shown in the Annual Update;

v. The prudence of actual costs and expenditures, including information on procurement methods and cost control methodologies;

vi. The effect of any change to the underlying USoA or Formula Rate Template; or

vii. Any other information that may reasonably have a substantive effect on the calculation of the charges pursuant to the Formula Rate.

(d) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(e) State whether the issues presented are pending in an existing proceeding in any forum in which the Interested Party is a party, and

if so, provide an explanation why timely resolution cannot be achieved in that forum;

(f) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that belief.

(g) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the Interested Party, including, but not limited to, contracts and affidavits; and

(h) State whether the filing party utilized the Informal Challenge procedures described in these Protocols with regard to any issue.

2. Formal Challenges shall be filed with FERC either in the FERC docket assigned to the Informational Filing or in the docket assigned to a challenge brought under Section 206 of the FPA and shall be served upon PEC contemporaneously with the filing at FERC. Service shall be accomplished by electronic mail in accordance with 18 C.F.R. § 385.2010(f)(3), by facsimile, express delivery or messenger to the individual listed as the contact person in PEC's Informational Filing.

D. Modification of Formula Rate or Annual Update

1. No party shall seek to modify the Formula Rate under the Challenge procedures (either Formal or Informal) set forth in these Protocols and the Annual Update shall not be subject to challenge for the purpose of modifying the Formula Rate.

2. A change to the Formula Rate fixed inputs related to rate of ROE, depreciation rates, capital structure, amortization periods, and any ROE incentives for SPP regional projects may not be made absent the appropriate filing with FERC pursuant to FPA Sections 205 or 206. Any modification to the Formula Rate will require a filing under FPA Sections 205 or 206.

3. If PEC makes a correction to a Mistake in its financial information during the Current Rate Year that would affect the Formula Rate for the Current Rate Year, such corrections and any resulting refunds or surcharges shall be reflected in the Annual Update for the next effective Rate Year with interest computed in accordance with 18 C.F.R. § 35.19a or successor regulation. For purposes of these Protocols, "Mistake" shall mean errors or omissions regarding the values inputted into the Formula Rate Template, such

as arithmetic or computational errors. Mistakes shall not include matters involving exercise of judgment or substantive differences of opinion regarding the derivation of an input that is more properly the subject of the annual review process.

4. Any changes to the data inputs or as the result of a FERC proceeding shall be incorporated into the Formula Rate and the charges produced by the Formula Rate in the Annual Update for the next effective Rate Year. Any interest on any refund shall be calculated in accordance with 18 C.F.R. § 35.19a or successor regulation. Refunds arising from PEC's first rate case shall be calculated at the lesser of PEC's short-term debt costs or the amount calculated pursuant to 18 C.F.R. § 35.19a or successor regulation.

5. Any Commission orders specifically applicable to PEC's calculation of its ATRR.

E. Informational Filing

1. By August 15 of each year, PEC shall submit its Information Filing to FERC of its Annual Update under a separate docket number.

2. The Informational Filing must include information that is reasonably necessary to determine:

(a) That input data under the Formula Rate is properly recorded in any underlying work papers;

(b) That PEC has properly applied the Formula Rate and these procedures;

(c) The accuracy of the data and the consistency with the Formula Rate of the ATRR and rates under review; and

(d) The extent of Accounting Changes that affect Formula Rate inputs.

3. The Informational Filing must also describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures.

4. Contemporaneous with the making of such Informational Filing, PEC shall provide notice of the Informational Filing to Interested Parties via the Formula Rate Posting Information Notification List and request that SPP post the notice and the docket number assigned to the Informational filing on the SPP OASIS.

## Example PEC Schedule

| Action | Date |
|---|---|
| Data Available | March 1 |
| Initial Posting | April 15 |
| Annual Meeting, Interested Parties | May 5 |
| Interested Parties Review Period | April 15 –June 15 |
| Final Posting | June 20 |
| FERC Informational Filing | August 15 |
| Rate Year | July 1-June 30 |

# Addendum 3 to Attachment H - Part 1

## Evergy Kansas Central, Inc. Formula Rate

**Evergy Kansas Central, Inc. (EKC)**
**Evergy Kansas South, Inc. (EKS)**
**Rate Formula Template**

**Table of Contents**

**Overview**
The formula is calculated in two steps. The first step is to fill out Tabs A-1 thru A-12, and the Actual Gross Rev. Req. tab with data from the previous year's Form 1 information. This information is used to update the formulas in the Actual Net Rev Req tab to calculate the Actual Revenue Requirement (Actual ATRR) for the previous year. The results of this calculation are presented to the customers for review no later than June 15 each year.

The TU (True-up) tab uses the Actual ATRR from the Actual Net Rev Req tab and compares it to the Projected ATRR customers were billed for the same period. Interest is added to the difference and the amount is added to the Projected Net Rev Req tab.

The projected O&M and plant balances are calculated in Tabs P-1 thru P-5. These sheets feed into the Projected Gross Rev Req tab and ultimately into the Projected Net Rev Req tab. The BPF tab retrieves project specific data from A-9, A-11 and P-4 to calculate the amount of revenue requirements associated with those projects which are contained in the total Projected Net Revenue Requirement amount. The EPP tab does the same process for Economic Portfolio projects by combining data from A-11, A-12 and P-5. The total revenue requirements for these two groups of upgrades (lines 9 and 9a) are subtracted from the Evergy Kansas Central, Inc. and Evergy Kansas South, Inc. Revenue Requirement (line 8) to obtain the Zonal ATRR (line 10). This calculation is shown on the Projected Net Rev Req tab. The Evergy Kansas Central, Inc. and Evergy Kansas South, Inc. tariff rates are calculated based on the Evergy Kansas Central, Inc. and Evergy Kansas South, Inc. Revenue Requirements and the specific point-to-point charges are shown on the same tab. The SPP rates are set on the BPF Revenue Requirements, Economic Portfolio Revenue Requirements and the Zonal Revenue requirements. The specific charges are calculated in the SPP tariff.

Cells highlighted in yellow are data input cells, however, some cells may reference the results from other worksheets in the formula. Such cell references may change from year to year requiring manual adjustment of the reference or the direct entry of the proper value.

Cells highlighted in green signify that the data is pulled from other worksheets in the formula and that the reference is static.

| Tab | Schedule/Worksheet Designation | Description | Date to be Posted |
|---|---|---|---|
| Actual Net Rev Req | Schedule "Actual Net Rev Req (page 1) | Actual net revenue requirements for most recent calendar year | June 15 |

Actual Gross Revenue Requirements

For the 12 months ended - December 31, xxxx

EVERGY KANSAS CENTRAL, INC. and
EVERGY KANSAS SOUTH, INC.

**NOTES**

General Note: References to pages in this formula rate are indicated as: (page#, line#, col.#).

References to data from FERC Form 1 are indicated as: page#.line#.col

| Note Letter | |
|---|---|
| A | Reserved for future use. |
| B | Identified in Form 1 as being only transmission related. |
| C | Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 2, line 11, col. 7.<br>Prepayments are the electric related prepayments booked to Account No. 165 and reported on FERC Form 1, p. 111, ln. 57.c. |
| D | Transmission O&M expense does not include any SPP charges for Schedule 1-A of the SPP OATT. |
| E | Transmission By Others, Account 565 includes only costs associated with transmission facilities which are assigned to the Evergy Kansas Central, Inc. and Evergy Kansas South, Inc. pricing zone by SPP. |
| F | Industry Association Dues are capped at $1,000,000. Line 6 - EPRI Annual Membership Dues listed in Form 1 at p. 335,<br>Line 6a Remove all Advertising expenses in Account 930.1.<br>Line 6b Remove all Regulatory Commission Expenses itemized at 351.h.<br>Line 6c - Add in wholesale Regulatory Commission Expenses directly related to transmission service, ISO filings, or transmission siting itemized at 351.h.<br>Line 6d Add in Safety related advertising that are in Account 930.1. |
| G | Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year.<br>Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere. |
| H | The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p ="the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 3, line 28). When FIT or SIT statutory tax rate changes take effect on other than a calendar year basis, the statutory<br>rates to be used in the formula rate template shall be weighted averages for the calendar year determined by weighting the statutory tax rates by the number days each such tax rate was in effect during the calendar year for which the costs are being determined. |

Inputs Required:

FIT =

SIT= (State Income Tax Rate or

| | | | |
|---|---|---|---|
| | | p = | Composite SIT) (percent of federal income tax deductible for state purposes) |

Removes transmission plant determined by Commission order to be state-jurisdictional according to the seven-factor I test (until FERC Form 1 balances are adjusted to reflect application of seven-factor test).

J Unless otherwise specified, OATT refers to the Evergy Kansas Central, Inc. and Evergy Kansas South, Inc. and SPP OATTs.

K Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed to be included in OATT ancillary services. For these purposes, generation step-up facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down.

L Removes dollar amount of transmission expenses included in the OATT ancillary services rates. Costs related to Ancillary 1, Scheduling and Control, Acct 561 is shown on Actual Gross Rev, page 2, line 2.

M Enter dollar amounts

N To determine what is entered in Line 19, EKC shall take EKC's Account 216.1 Balance (EKC.112.12.c) and subtract EKS's Retained Earnings (EKS 112.11.c). If the resulting amount is positive, enter such amount in the formula. If the resulting amount is negative, enter zero.

O Debt cost rate = long-term interest (line 15) / long term debt (line 21). Preferred cost rate = preferred dividends (line 16) / preferred stock (line 22).

The approved ROE is 11.3%, no change in ROE may be made absent a filing with FERC. Any incentive ROEs approved by the Commission are shown by project in Worksheet A-11.

If the transmission related component of property tax is specifically identified in Form 1, then a TP allocator shall be used.

P Property tax shall be allocated to transmission by the GP allocator if transmission related property tax is not specifically identified in the Form 1.

Q The initial depreciation rates below will be used to calculate depreciation expense and accumulated depreciation balances absent an appropriate filing with FERC.

| | Depreciation Rate | | | |
|---|---|---|---|---|
| | Non-incentive Plant EKC | Non-incentive Plant EKS | Wichita-to-Reno-to-Summit | Future Incentive Project |
| FERC Account Number | | | | |
| 350 Land and Land Rights | | | | |
| 351 (reserved) | | | | |
| 352 Structures and Improvements | 1.75 | 1.74 | 6.67 | - |

| | | | | | |
|---|---|---|---|---|---|
| | 353 Station Equipment | 1.74 | 1.67 | 6.67 | - |
| | 354 Towers and Fixtures | 2.01 | 1.43 | 6.67 | - |
| | 355 Poles and Fixtures | 2.57 | 2.59 | 6.67 | - |
| | 356 Overheard Conductors and Devices | 2.58 | 2.46 | 6.67 | - |
| | 357 Underground Conduit | 0.00 | 1.06 | 6.67 | - |
| | 358 Underground Conductors and Devices | 0.00 | 1.99 | 6.67 | - |
| | 359 Roads and Trails | 0.00 | 0.70 | 6.67 | - |

The incentive depreciation rates will be applied to assets recorded in the Wichita-to-Reno-to-Summit location code in EKS's transmission depreciation groups.

R The initial Post-Employment Benefits Other than Pensions (PBOP) expense set forth below will be used in lieu of the actual PBOP expense incurred in the year absent an appropriate filing with FERC.

| | **EKC** | **EKS** | **TOTAL** |
|---|---|---|---|
| Post-Employment Benefits Other than Pensions | $ 9,697,558 | $ 6,642,051 | $16,339,609 |

S Page 1 line 19a is the unamortized balance related to the recovery of transmission expense for the December 2007 ice storm booked in Account 182.3. Accrued transmission expenses for the December 2007 ice storm shall be amortized in the transmission O&M accounts over 36 months beginning June 1, 2008. The total amount to be amortized in the transmission O&M accounts shall be $6,647,679, developed as follows:

| | EKC | EKS | Total |
|---|---|---|---|
| Total transmission expenses accrued for the December 2007 ice storm | $6,758,037.33 | $0.00 | $6,758,037.33 |
| Less total transmission storm damage reserve as of December 2007 | $110,358.00 | $0.00 | $110,358.00 |
| Total transmission expense to be amortized | $6,647,679.33 | $0.00 | $6,647,679.33 |

* All future accruals of transmission storm damage reserves will be subtracted from rate base until they are applied to offset the December 2007 ice storm damage expenses.

T The gross plant, accumulated depreciation, deferred tax balances, and depreciation expense do not include balances related to Asset Retirement Obligations (AROs). This is to comply with the requirements of FERC Rulemaking RM02-7-000, Order No. 631.

*Includes the amortization of any excess/deficient income taxes resulting from changes to income tax rates (including changes in apportionment) and other actions taken by a taxing authority.*
*Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/1-T). The EKC input comes from worksheet A-5-2 (EKC ADIT wksht), Net (Excess)/Deficient Deferred Income Taxes, Column (l) and the EKS input comes from worksheet A-7-2 (EKS ADIT wksht), U Net (Excess)/Deficient Deferred Income Taxes, Column (l).*

| | |
|---|---|
| Revenues from Grandfathered Interzonal Transactions | $ - |
| Revenues from service provided by the ISO at a discount | $ - |

**Worksheet A-1 - Revenue Credit**

**Evergy Kansas Central, Inc. and Evergy Kansas South, Inc.**
**Determination of Revenue Credits**

**IV**

**Notes**

Account 456 revenue treated as a credit to cost of service in this formula is from subaccount 456.1000, Transmission Service. Revenue **A** from Grandfathered point-to-point (GFA - all Companies in Section I except SWPP).

Revenue from Grandfathered point-to-point (GFA - all Companies in Section I except SWPP).

**Wholesale NITS Revenues - The content in these categories can change over time:**

| Month | SWPP Allocated NITS | SWPP Individual NITS | SWPP NITS Bought by Others | Total $ |
|---|---|---|---|---|
| January | | | | - |
| February | | | | - |

| | | | | |
|---|---|---|---|---|
| March | | | | - |
| April | | | | - |
| May | | | | - |
| June | | | | - |
| July | | | | - |
| August | | | | - |
| September | | | | - |
| October | | | | - |
| November | | | | - |
| December | | | | - |
| Total | $ - | $ - | $ - | $ - |

Monthly loads associated with the remaining revenue for Transmission Service (subaccount 456.1001) from SWPP (e.g., retail) are also included in the DIVISOR. However, the associated revenue is

included as a revenue credit to offset the associated SWPP expenses booked to account 566, Miscellaneous Transmission Expense.

Revenue from Grandfathered Agreements involving interzonal transactions whose rates have been changed to eliminate or mitigate pancaking are included in Section III above and the corresponding

loads are included in the DIVISOR.

Revenue from Grandfathered Agreements involving interzonal transactions whose rates have not been changed to eliminate or mitigate pancaking are not included in Section III above and the corresponding

loads are not included in the DIVISOR.

Revenue credits do not include revenues associated with FERC annual charges, gross receipts taxes, ancillary services and/or facilities not included in this template, e.g., directly assigned facilities, GSUs, etc.

Account 454 (Rent from Electric Property) includes income related only to transmission facilities, such as pole attachments, rentals and special use.

**B** Line 21a represents a refund or surcharge that is done by SPP where the increase or decrease in revenue is not reflected in the 456.1000 or 456.1001 revenues. If a value is entered into this

line, a support worksheet will be included with the posted formula. Refunds will be entered as a negative value, surcharges as a positive value. The adjustment does not included any refunds or surcharges
associated with the sale of ancillary services.
Line 21b is the ratio of the amount of the revenue credit on line 20 to the total amount of revenue collected from the transmission charges, excluding ancillary revenues.

C The Transmission Facilities Charge is the revenue from transmission customers that pay for direct assigned costs related to transmission facilities. This revenue is anticipated from the implementation of the SPP definition of transmission (Attachment AI) which requires the direct assignment of costs related to 1) single customer radial facilities and 2) those facilities which are booked into transmission accounts, but operate at less than 60 kV and have not been determined to be transmission facilities by the Commission using the seven factor test.

*Notes:*

*A* *Amount carried from EKS Computation tab column (h).*
*B* *Includes return to accrual adjustments, amended return adjustments, book adjustments and other.*

*C* *Excess and Deficient balances exclude income tax gross-ups recorded to accounts 182.3 and 254.*

*D* *Each EDIT item is categorized into 1 of 5 categories. The selected category will determine the Allocator applied to the EDIT balance.*

*1) NonTrans: The EDIT balance is 100% unrelated to the Transmission of electricity and the NA Allocator is applied.*
*2) Retail: The EDIT balance is 100% related to retail operations and the NA allocator is applied.*
*3) Trans: The EDIT balance is 100% related to transmission operations and the DA Allocator is applied.*
*4) Plant: The EDIT balance is related to Property, Plant & Equipment "PP&E" and the GP Allocator is applied.*
*5) Labor: The EDIT balance is labor related and the W/S allocator is applied.*

Notes:
(A) Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 12) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2)
(B) Special depreciation rates may be utilized for specific incentive transmission projects if approved by the FERC.
( C ) Only Base Plan Funded projects that have been completed and whose costs are in the Form 1 should be entered on this page. If a pr oject is done in phases over multiple years, that project should be entered in sheet P-4 until the entire project Is completed and in the Form 1.
(D) All Base Plan Funded projects whose costs are in the Form 1 and are also incentive projects should be entered into sheet A-11.

| 36 | 2030 | $0 | $0 | $0 | 30 | - | - | - | - | - | - | - | - | - | - | - | - |

Notes:

(A) Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 12) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2)

(B) Incentive Economic Portfolio Projects are listed on A11, page 3 of 3.

( C ) Only Economic Portfolio projects that have been completed and whose costs are in the Form 1 should be entered on this page. If a project is done in phases over multiple years, that project should be entered in sheet P-4 until the entire project Is completed and in the Form 1.

(D) All Economic Portfolio projects whose costs are in the Form 1 and are also incentive projects should be entered into sheet A-11.

# Addendum 3 to Attachment H - Part 2

**Worksheet TU - True-up Adjustment and Timeline**

**Timeline**

|---|---|---|---|---|---|---|
| | | | (1) | (2) | (3) | (4) |
| | | | $ | $ | $ | $ |
| 25 | | True-Up Amount (line 8c) (Note F) | - | - | - | - |
| 26 | | Interest on True-up Amount ([Average Interest Rate / 12 months]*24 months] | - | - | - | - |
| 27 | | One time, first year adjustment (proj. year 2009) (Note B) | | | | $ - |
| 28 | | **True-up Adjustment (Note G)** | **$ -** | **$ -** | **$ -** | **$ -** |

Not
e: A Interest rate divided in half for first year (2007 historic, 2009 projected) to account for only 1 year of interest rather than two.

B First year adjustment is to allow for any adjustments in the Revenue Requirement for the change from an historic to a projec ted test period.

C Sum of the daily short-term borrowings is supplied from the Finance Department.

D Use the lower of line 14 and line 23 if the True-up Amount (line 25) is greater than or equal to zero.
Use line 23 if the True-up amount (line 25) is less than zero.

E Enter the Projected Revenue Requirement for the Actual period without a true-up adjustment.
If the annual update is for a partial year, not 12 months, then the amount on line
F 25 shall be number of months in the partial year/12.

G Prior Period Adjustment, if any, is calculated to the same timing basis as balance of true up (i.e. before interest applied on line 26).
Workpapers for the Prior Period Adjustment calculation will be included in supporting documentation.

G (Hold future use)

H The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 3, line 28).

Inputs Required:

FIT = (Federal Income Tax Rate)

SIT= (State Income Tax Rate or Composite SIT)

p = (percent of federal income tax deductible for state purposes)

(A) Projected non-incentive transmission depreciation expense (P-1, page 2, line 28) divided by projected transmission plant in service (P-1, page 2, line 29) divided by 12.

Notes:

(B) 15-year accelerated depreciation expenses authorized in Docket Nos. EL08-31-000 and ER08-396-000.

( C) May also include Incentive Projects if Incentive Projects are also Base Plan Funded.

Notes: (A) Projected transmission depreciation expense (Projected Gross Rev Req, page 1, line 10) divided by projected transmission plant in service (Projected Gross Rev Req, page 1, line 1) divided by 12.
(B) May also include Incentive Projects if
Incentive Projects are also Base Plan Funded.

# Formula Rate Implementation Protocols

## I. Annual True-Up and Annual Projection

1. The Evergy Kansas Central, Inc. ("Evergy") formula rate template in Attachment H-1 of Southwest Power Pool's ("Evergy") Open Access Transmission Tariff ("Formula Rate"), is Evergy's filed rate. Evergy shall follow the instructions specified in the Formula Rate to calculate annually its Annual Transmission Revenue Requirements ("ATRR") and the rates for its Network Integration Transmission Service and Point-to-Point transmission service. These protocols shall apply to Evergy's calculation of its ATRR, including the calculation of the Annual True-Up ("Annual True-Up") and the projected net revenue requirement ("Annual Projection").

2. The Formula Rate shall be applicable to service on and after January 1st of each calendar year through December 31st of the same calendar year ("Rate Year"), subject to review, challenge and refunds or surcharges with interest, as provided herein.

3. On or before June 15th, Evergy shall provide its Annual True-Up to SPP and cause such information to be posted on SPP's website and OASIS. Within ten (10) days of such posting, Evergy shall provide notice of such posting to all parties on the SPP exploder list titled "Service List". Interested Parties can contact SPP to subscribe to the SPP exploder list.

4. On or before October 15th, Evergy shall provide its Annual Projection to SPP and cause such information to be posted on SPP's website and OASIS. Within ten (10) days of such posting, Evergy shall provide notice of such posting to all parties on the SPP exploder list titled "Service List". Interested Parties can contact SPP to subscribe to the SPP exploder list.

5. Evergy shall submit to FERC an Informational Filing as provided in Section V of these protocols.

6. If the date for posting the Annual True-Up or Annual Projection falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day. The date on which such posting occurs shall be that year's "Publication Date". Any delay in the Publication Date or in the posting of the Annual True-Up or Annual Projection will result in an equivalent extension of time for the submission of Information Requests discussed in Section II of these protocols.

7. A change to the Formula inputs related to return on equity, revised depreciation rates or Post-Employment Benefits Other than

Pensions may not be made absent an appropriate filing with FERC.

8. The Annual True-Up shall

   (a) Be based on FERC Form No. 1 data for the prior calendar year, and, to the extent specified in the Formula, upon the books and records of Evergy consistent with FERC accounting policies and practices;

   (b) Identify all material adjustments made to the FERC Form No. 1 data in determining formula inputs, including relevant footnotes to FERC Form No. 1 and any adjustments not shown in FERC Form No. 1.

9. The Annual True-Up and Annual Projection shall:

   (a) Include a workable data-populated Formula Rate Template and underlying workpapers in native format with all formulas and links intact;

   (b) Provide the Formula Rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used that are not otherwise available in the FERC Form No. 1;

   (c) Provide sufficient information to enable Interested Parties (as defined in Section I.10 of these protocols) to replicate the calculation;

   (d) Identify any changes in the formula references (page and line numbers) to the FERC Form No. 1;

   (e) With respect to any change in accounting that affects inputs to the Formula Rate or the resulting charges billed under the Formula Rate ("Accounting Change"):

      (i) Identify any Accounting Changes, including

         - The initial implementation of an accounting standard or policy;

         - the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

- correction of errors and prior period adjustments that impact the calculation;
- the implementation of new estimation methods or policies that change prior estimates; and

changes to income tax elections;

(ii) Identify items included in the calculation at an amount other than on a historic cost basis (e.g., fair value adjustments);

(iii) Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs;

(iv) Provide, for each item identified pursuant to items I.9.e.i - I.9.e.iii of these protocols, a narrative explanation of the individual impact of such changes on the calculation.

10. Evergy shall hold an open meeting among Interested Parties ("Annual True-Up Meeting") after the Annual True-Up Publication Date but no sooner than seven (7) days from the Publication Date and no later than July 15th. No less than thirty (30) days prior to such Annual True-Up Meeting, Evergy shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual True-Up Meeting and Evergy shall provide notice of such meeting to the SPP email exploder list titled "Service List". For purposes of these protocols, the term Interested Party includes, but is not limited to customers under the SPP OATT, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general. The Annual True-Up Meeting will be hosted by Evergy in the forum of their choice which may include video conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. Evergy shall provide remote access for Interested Parties to participate in the meeting. The Annual True-Up Meeting shall (i) permit Evergy to explain and clarify its Annual True-Up; and (ii) provide Interested Parties an opportunity to seek information and clarifications from Evergy about the Annual True-Up.

11. Evergy shall hold an open meeting among Interested Parties ("Annual Projected Rate Meeting") after the Annual Projection Publication Date but no sooner than seven (7) days from the Publication Date and no later than October 30th. No less than thirty (30) days prior to such Annual Projected Rate Meeting, Evergy shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual Projected Rate Meeting and Evergy shall provide notice of such meeting to an email exploder list. The Annual Projected Rate Meeting will be hosted by Evergy in the forum of their choice which may include video

conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. Evergy shall provide remote access for Interested Parties to participate in the meeting. The Annual Projected Rate Meeting shall (i) permit Evergy to explain and clarify its Annual Projection and (ii) provide Interested Parties an opportunity to seek information and clarifications from Evergy about the Annual Projection.

12. Each year Evergy shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members, and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

## II. Information Exchange Procedures

Each Annual True-Up and Annual Projection shall be subject to the following information exchange procedures ("Information Exchange Procedures"):

1. Interested Parties shall have seventy-five (75) days following the Annual True-Up Meeting to serve reasonable information and document requests related to the Annual True-Up; and sixty (60) days following the Annual Projection Publication Date (unless such period is extended with the written consent of Evergy or by FERC order) to serve reasonable information and document requests on Evergy related to the Annual True-Up and the Annual Projection ("Information Exchange Period"). If either of these dates falls on a weekend or a holiday recognized by FERC, the deadline for submitting all information and document requests shall be extended to the next business day. Such information and document requests shall be limited to what is necessary to determine:

   (a) the extent, effect or impact of an Accounting Change;

   (b) whether the Annual True-Up or Annual Projection fails to include data properly recorded in accordance with these protocols;

   (c) the proper application of the Formula Rate and procedures in these protocols;

(d) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual True-Up or Annual Projection;

(e) the prudence of actual costs and expenditures, including the prudence of Evergy's procurement methods and cost control methodologies;

(f) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or

(g) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

The information and document requests shall not otherwise be directed to ascertaining whether the Formula Rate is just and reasonable.

2. Evergy shall make a good faith effort to respond to information and document requests within fifteen (15) business days of receipt of such requests. Information requests received after 4 p.m. Central Prevailing Time shall be considered received the next business day.

3. Evergy will cause to be posted on SPP's website and OASIS all information requests from Interested Parties and Evergy's response(s) to such requests; except, however, if responses to information and document requests include material deemed by Evergy to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by Evergy and the requesting party.

4. Evergy shall not claim that responses to information and document requests provided pursuant to these protocols are subject to any settlement privilege, in any subsequent FERC proceeding addressing Evergy's Annual True-Up or Annual Projection.

## III. Challenge Procedures

1. Interested Parties shall have until January 31st following the Publication Date (unless such period is extended with the written consent of Evergy or by FERC order) to review the inputs, supporting explanations, allocations and calculations and to notify Evergy in writing, which may be made electronically, of any specific Informal Challenges to the Annual True-Up or Annual Projection. The period of time from the Publication Date until January 31st shall be referred to as the Review Period. If January 31st falls on a weekend or a holiday recognized by FERC, the deadline for submitting all Informal Challenges shall be extended to the next business day. Failure to pursue an issue through an Informal Challenge shall not bar pursuit of that issue as part of a Formal Challenge with respect to the same Annual True-Up or Annual Projection as long as the Interested Party has included at least one issue as part of an Informal Challenge with respect to that Annual True-Up or Annual Projection. If the Interested Party has not included any issues as part of an Informal Challenge for an Annual True-Up or Annual Projection, the Interested Party is barred from pursuing a Formal Challenge with respect to any issue for that Annual True-Up or Annual Projection but is not barred from pursuing an issue or from lodging a Formal Challenge as to such issue as it relates to a subsequent Annual True-Up or Annual Projection.

2. A party submitting an Informal Challenge to Evergy must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. Evergy shall make a good faith effort to respond to any Informal Challenge within twenty (20) business days of notification of such challenge. Evergy, and where applicable, SPP, shall appoint a senior representative to work with the party that submitted the Informal Challenge (or its representative) toward a resolution of the challenge. If Evergy disagrees with such challenge, Evergy will provide the Interested Party(ies) with an explanation supporting the inputs, supporting explanations, allocations, calculations, or other information. No Informal Challenge may be submitted after January 31st, and Evergy must respond to all Informal Challenges by no later than February 28th, unless the Review Period is extended by Evergy or FERC.

3. Informal Challenges shall be subject to the resolution procedures and limitations in this Section III. Formal Challenges shall be filed pursuant to these protocols and shall satisfy all of the following requirements.

   (a) A Formal Challenge shall:

      (i) Clearly identify the action or inaction which is alleged to violate the filed rate formula or protocols;

      (ii) Explain how the action or inaction violates the filed rate formula or protocols;

(iii) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

- The extent or effect of an Accounting Change;
- Whether the Annual True-Up or Annual Projection fails to include data properly recorded in accordance with these protocols;
- The proper application of the Formula Rate and procedures in these protocols;
- The accuracy of data and consistency with the Formula Rate of the charges shown in the Annual True-Up or Annual Projection;
- The prudence of actual costs and expenditures;
- The effect of any change to the underlying Uniform System of Accounts or FERC Form 1; or
- Any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

(iv) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(v) State whether the issues presented are pending in an existing Commission proceeding or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(vi) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(vii) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(viii) State whether the filing party utilized the Informal Challenge procedures described in these protocols with regard to any issue.

(b) Service. Any person filing a Formal Challenge must serve a copy of the Formal Challenge on Evergy. Service to Evergy must be simultaneous with filing at the Commission. Simultaneous service can be accomplished by electronic mail in accordance with § 385.2010(f)(3), facsimile, express delivery, or messenger. The party filing the Formal Challenge shall serve the individual listed as the contact person on Evergy's Informational Filing required under Section V of these protocols.

4. Informal and Formal Challenges shall be limited to all issues that may be necessary to determine: (1) the extent or effect of an Accounting Change; (2) whether the Annual True-Up or Annual Projection fails to include data properly recorded in accordance with these protocols; (3) the proper application of the Formula Rate and procedures in these protocols; (4) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual True-Up and Annual Projection; (5) the prudence of actual costs and expenditures; (6) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or (7) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

5. Evergy will cause to be posted on SPP's website and OASIS all Informal Challenges from Interested Parties and Evergy's response(s) to such Informal Challenges; except, however, if Informal Challenges or responses to Informal Challenges include material deemed by Evergy to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by Evergy and the requesting party.

6. Any changes or adjustments to the Annual True-Up or Annual Projection resulting from the Information Exchange and Informal Challenge processes that are agreed to by Evergy will be reported in the Informational Filing required pursuant to Section V of these protocols. Any such changes or adjustments agreed to by Evergy on or before November 30th will be reflected in the Annual Projection for the upcoming Rate Year. Any changes or adjustments agreed to by Evergy after November 30th will be reflected in the following year's Annual True-Up, as discussed in Section IV of these protocols.

7. An Interested Party shall have until March 31st following the Review Period (unless such date is extended with the written consent of Evergy to continue efforts to resolve the Informal Challenge) to make a Formal Challenge with FERC, which shall be served on Evergy on the date of such filing as specified in Section III.3.b above. A Formal Challenge shall be filed in the same docket as Evergy's Informational Filing discussed in Section V of these protocols. Evergy shall respond to the Formal

Challenge by the deadline established by FERC. A party may not pursue a Formal Challenge if that party did not submit any Informal Challenge during the applicable Review Period.

8. In any proceeding initiated by FERC concerning the Annual True-Up or Annual Projection or in response to a Formal Challenge, Evergy shall bear the burden, consistent with section 205 of the Federal Power Act, of proving that it has correctly applied the terms of the Formula Rate consistent with these protocols, and that it followed the applicable requirements and procedures in these protocols. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

9. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of Evergy to file unilaterally, pursuant to Federal Power Act section 205 and the regulations thereunder, to change the Formula Rate or any of its inputs (including, but not limited to, rate of return and transmission incentive rate treatment), or to replace the Formula Rate with a stated rate, or the right of any other party to request such changes pursuant to section 206 of the Federal Power Act and the regulations thereunder.

10. No party shall seek to modify the Formula Rate under the Challenge Procedures set forth in these protocols and the Annual True-Up and Annual Projection shall not be subject to challenge by anyone for the purpose of modifying the Formula Rate. Any modifications to the Formula Rate will require, as applicable, a Federal Power Act section 205 or section 206 filing.

11. Any Interested Party seeking changes to the application of the Formula Rate due to a change in the Uniform System of Accounts or FERC Form No. 1, shall first raise the matter with Evergy in accordance with this Section III before pursuing a Formal Challenge.

## IV. Changes to Annual True-Up or Annual Projection

1. Except as provided in Section III.6 of these protocols, any changes to the data inputs, including but not limited to revisions to Evergy's FERC Form No. 1, or as the result of any FERC proceeding to consider the Annual True-Up or Annual Projection, or as a result of the procedures set forth herein, shall be incorporated into the Formula Rate and the charges produced by the Formula Rate in the Annual Projection for the next Rate Year. This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments. Interest on any refund or surcharge shall be calculated in accordance with the procedures outlined in Section

VI of these protocols.

2. In the event that Evergy identifies an error in the Annual True-Up (or its FERC Form No. 1 or successor form which is used as an input to the Formula), or is required by applicable law or a court or regulatory body to correct an error, Evergy shall correct such error in good faith and without regard to whether the correction increases or decreases Evergy's revenue requirements. Nothing in these protocols should or may be construed as preventing Interested Parties or the Commission from protesting such correction as inappropriate.

## V. Informational Filings

1. By March 15th of each year, Evergy shall submit to FERC an informational filing ("Informational Filing") of its Annual Projection for the Rate Year, including its Annual True-Up. This Informational Filing must include the information that is reasonably necessary to determine: (1) that input data under the Formula Rate are properly recorded in any underlying workpapers; (2) that Evergy has properly applied the Formula Rate and these procedures; (3) the accuracy of data and the consistency with the Formula Rate of the Transmission Revenue Requirement and rates under review; (4) the extent of accounting changes that affect Formula Rate inputs; and (5) the reasonableness of projected costs. The Informational Filing must also describe any corrections or adjustments made during that period, and must describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. Within five (5) days of such Informational Filing, Evergy shall provide notice of the Informational Filing via an email exploder list and by posting the docket number assigned to Evergy's Informational Filing on SPP's website and OASIS.

2. Any challenges to the implementation of the Attachment H-Evergy Formula Rate must be made through the Challenge Procedures described in Section III of these protocols or in a separate complaint proceeding, and not in response to the Informational Filing.

## VI. Calculation of True-Up Adjustment for the Annual True-Up

The True-Up Adjustment for the Annual True-Up will be determined in the following manner:

1. The Projected Revenue Requirement for the previous year, not including any prior year True-Up Adjustment, shall be compared to the Actual Revenue Requirement calculated in accordance with Evergy's Formula Rate for the previous year using FERC Form No. 1 for that same year, and, to the extent specified in the Formula, upon the books and records of Evergy consistent with FERC accounting policies and practices, to determine any over or under recovery plus interest ("True-Up Adjustment"). The True-Up Adjustment and related calculations shall be posted as part of Evergy's Annual True-Up to SPP's website and OASIS no later than June 15th (or if that day falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day) following the issuance of the FERC Form No. 1 for the previous year.

   (a) Interest on any over recovery of the net revenue requirement shall be determined based on the Commission's regulations at 18 C.F.R § 35.19a. Interest on any under recovery of the net revenue requirement shall be determined using the interest rate equal to Evergy's actual short-term debt costs, calculated as Evergy's actual weighted average annual short-term interest rate for the twenty-four (24) months ended August 31st of the current Rate Year ("S-T Debt Cost Period"), capped at the applicable FERC refund interest rate for the same twenty-four (24) month period. In either case, the interest rate to be applied to the over- or under-recovery amounts will be determined using the average rate for the twenty-four (24) months preceding September of the current year. The interest amount will be included in the Annual Projection made available on October 15th. For purposes of the foregoing, short-term debt interest expense annual rate for refund purposes shall be as follows:

   STIR = (STIEXP / SDSTDB) x N where

   STIR = the annual short term interest rate on notes payable excluding notes with Associated Companies) for the S-T Debt Cost Period,

   STIEXP = the interest expense on such notes payable recorded in Account 431 and Account 428 for the S-T Debt Cost Period,

   SDSTDB = the sum of the outstanding daily balances of notes payable for such S-T Debt Cost Period recordable in Account 231, and

   N = the number of days in such S-T Debt Cost Period.

2. The Net Revenue Requirement for transmission services for the following year shall be the sum of the projected revenue

requirement for the following year and a True-Up Adjustment for the previous year, including interest as explained above.

AEP West SPP Member Operating Companies
Transmission Cost of Service Formula Rate
Utilizing Actual / Projected Cost Data for the 2XXX Rate Year
COMPANY NAME

**Letter** **Notes**

General Note: True Up References to data from FERC Form 1 are indicated as: page#.line#.col.#. Rate Year Projections from Company forecasts.

A The revenue credits shall include a) amounts received directly from the SPP for PTP transmission services, b) direct assignment charges for transmission facilities, the cost of which has been included in the TCOS, and c) amounts from customers taking service under grandfathered agreements, where the demand is not included in the rate divisor. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or facilities excluded from the TCOS are not included as revenue credits. Revenue from Transmission Customers whose coincident peak loads are included in the DIVISOR of the load-ratio share calculation are not included as revenue credits. See Worksheet H for details.

B The annual and monthly net plant carrying charges on page 1 are used to compute the revenue requirement for facilities and any upgrades.

C This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. Worksheet G shows the calculation of the trued-up revenue requirement for each project, based on an FCR rate calculated from inputs on this TCOS. Line 13 shows the incremental ARR for projects receiving incentives as accepted by FERC. These individual additional revenue requirements are summed for the true-up year, and included here.

D The gross plant, accumulated depreciation, and deferred tax balances included in rate base and depreciation expense are reduced by the removal of amounts related to
Asset Retirement Obligations (AROs). This is to comply with the requirements of FERC Rulemaking RM02-7-000.

E The total-company balances shown for Accounts 281, 282, 283, 190 only reflect ADIT that relates to utility operations. The balance of Account 255 is reduced by

prior flow throughs and is completely excluded if the utility chose to utilize amortization of tax credits against FIT expense as discussed in Note N. An exception to this is pre-1971 ITC balances, which are required to be taken as an offset to rate base. Account 281 is not allocated to transmission. Transmission allocations are shown on Worksheet C.

F Identified as being transmission related or functionally booked to transmission.

G Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission on line 70.

H Consistent with Paragraph 657 of Order 2003-A, the amount on line is equal to the balance of IPP System Upgrade Credits owed to transmission customers that made contributions toward the construction of System upgrades, and includes accrued interest and unreturned balance of contributions. The annual interest expense is included on line 113.

I Line 65 Removes the expense booked to transmission accounts included in the development of OATT ancillary services rates, including all of Account No. 561.

J Removes cost of transmission service provided by others to the extent such service is not incurred to provide the SPP service at issue.

K General Plant and Administrative & General expenses may be functionalized based on allocators other than the W/S allocator. Full documentation must be provided.

L Expense reported for these A&G accounts will be included in the cost of service only to the extent they are directly assignable or allocable to transmission service. Worksheet J allocates
these expense items. Acct 928 Includes Regulatory Commission expenses itemized in FERC Form-1 at page 351, column H. FERC Assessment Fees and Annual Charges shall not be allocated to transmission. Only safety-related and educational advertising costs in Account 930.1 are included in the TCOS. Account 930.2 includes the expenses incurred by the transmission function for Associated Business Development revenues given as a credit to the TCOS on Worksheet H.

M Recoverable PBOP expense is based on actual annual PBOP costs, including charges from the AEP Service Corporation. The PBOP amounts are included in the
Administrative and General total, and are based on current year expenses. The annual actuarial valuation report supporting the derivation of the PBOP expense,
along with an explanation of PBOP derivation process, is submitted during the formula rate annual update.

N Includes only FICA, unemployment, property and other assessments charged in the current year. Gross Receipts tax, Sales & Use taxes, local franchise taxes, and taxes related to income are excluded.

O The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) (ln 99) multiplied by (1/1-T) . If the applicable tax rates are zero enter 0.

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | | |
| | SIT= | - | (State Income Tax Rate or Composite SIT. Worksheet K) |

p = - (percent of federal income tax deductible for state purposes)

Excess / (Deficit) Deferred Income Taxes will be amortized over the average remaining life of the assets to which it relates, unless the Commission requires a different amortization period. Recovery of permanent and flow through differences is limited to only the transmission functional portion of the tax difference related to capitalized AFUDC Equity.

P The Texas Gross Margin tax is calculated on the Texas allocated revenue of the Company, reduced by cost of goods sold deduction to derive a "Gross Margin" for the Company. The tax rate of one percent is assessed on the resulting amount. The jurisdictional allocator is based on transmission demand allocators.

Q Removes plant excluded from the OATT because it does not meet the SPP's definition of Transmission Facilities or is otherwise ineligible to be recovered under the OATT.

R Removes transmission plant (e.g. step-up transformers) included in the development of OATT ancillary service rates and not already removed for reasons indicated in Note Q.

S Includes functional wages & salaries incurred by parent company service corporation for support of the operating company.

T Long Term Debt cost rate = Long-Term Interest (ln 132) / Long Term Debt (ln 141). Preferred Stock cost rate = preferred dividends (ln 133) / preferred outstanding (ln 142). Common Stock cost rate (ROE) = 10.5%, the rate accepted by FERC pursuant to the settlement filed in Docket Nos.EL17-76 / EL18-199. It includes an additional 50 basis points for remaining a member of the SPP RTO.

The amount of eligible hedging gains or losses included in total interest expense is limited to five basis points of the capital structure. Details and calculations of the weighted average cost of capital are shown on Worksheet M. Eligible Hedging Gains and Losses are computed on Worksheet M. The unamortized balance of eligible hedge gains/losses and related ADIT amounts shall not flow through the formula rate.

U The cost of service will make a rate base adjustment to remove unfunded reserves associated with contingent liabilities recorded to Accounts 228.1-228.4 from rate base.

V O&M and A&G shall be adjusted to remove all regulatory asset deferrals and amortizations that have not been approved by FERC for inclusion in cost of service, and then to add back in FERC approved amortizations and deferrals. Negative amounts in O&M or A&G represent deferrals. See Worksheet S.

W If the company submits a Section 205 filing proposing to make adjustments to this formula rate cost of service template to remove assets and costs related to transmission facilities constructed and operated specifically for the purpose of delivering the output of generation facilities, including generation tie-lines, which do not qualify under the SPP OATT for inclusion in transmission cost of service, challenges to such filing(s) shall be limited to the justness and reasonableness of such proposal.

X If the company submits a Section 205 filing proposing to make adjustments to this formula rate cost of service template to remove from the cost of capital the debt and related interest costs incurred in connection with financing specifically dedicated to non-transmission-related assets, such as securitization financing, challenges to such filing(s) shall be limited to the justness and reasonableness of such proposal's impacts on the Company's cost of capital.

Actual / Projected 2XXX Rate Year Cost of Service Formula Rate

**Worksheet C-4 - Excess Deferred Federal Income Taxes**

**COMPANY NAME**

NOTES

Include only excess DFIT recorded in accounts which are included in the formula rate cost of service. These include one or more subaccounts within accounts 190.1, 282.1, and 283.1.

*NOTE A: Unprotected balances of excess/deficient ADIT will be amortized over five years, starting the year after the change is effective, consistent with the settled process approved in Docket ER18-195 (167 FERC ¶ 61,272 at 6.) for the excess and deficient ADIT caused by the TCJA of 2017. Additional columns will be added to reflect future tax changes.*

*NOTE B: In the event that an initial unprotected, excess or deficient ADIT amount changes due to adjustments, residual balances will be amortized in the final year of the amortization period. In that case this line will be a manual input.*

*NOTE F/G*

*GENERAL NOTE:*
*The information provided on this worksheet reflects the activity on the books of the Company, which maintains these records on both a total company and transmission functional basis. Because of the required exclusion of certain excess and deficient balances that relate to ADIT differences that aren't recoverable in the formula, the Company will use WS C-4 for determining the amortization recoverable in the formula, as opposed to using the transmission functional book amounts that are shown on this work sheet. See NOTE E and NOTE G below for a further description on how the Company will track future tax rate changes and ensure the proper net amount is recorded on line 105 in the TCOS of the formula.*
*NOTE A: In order to ensure ratebase neutrality, AEP utilizes the fourth digit of its seven digit FERC tax subaccount numbers to identify balances associated with utility operations vs. regulatory reporting requirements. A "1" in the fourth digit of a FERC tax account refers to the utility operations balances or activity. Accounts with the "1" designation will be included in the determination of ratebase to be recovered in the formula rate. A "4" in the fourth position of the account number indicates accounts used to track regulatory accounting requirements. The excess ADIT amounts recorded in accounts with the "4" designation will be contra to the "1" balance, which will ensure that in the formula rate the excess or deficiency amounts will be part of ratebase, but at the total FERC account level the tax liability or asset will be recorded at the current Federal FIT rate. The amounts recorded in the "4" accounts will be offset on a net basis in the regulatory asset or liability subaccount established for this purpose.*
*NOTE B: The amount of the FIT gross up to recorded on regulatory assets and liabilities will be reported on the first line of ADIT accounts provided for each specific change in tax rates.*
*NOTE C: The amounts of the remeasurement shown here are as of the effective date of the change in tax rates and will remain static on this workpaper. The derivation of this amount, along with the pre-remeasurement and post-remeasurement balances of ADIT, are presented in formula wokpaper(s) C-5-X.*
*NOTE D: {REFERENCE OR CITES TO APPROVAL OF AMORTIZATION PERIOD FOR UNPROTECTED EXCESS/DEFICIENT ADIT}*
*NOTE E: In the event of future tax rate changes, additional lines will be inserted in both the total company and transmission functional sections above as required to reflect any new ADIT or regulatory deferral accounts that may be necessary to track that tax rate change.*
*NOTE F: The amount of excess amortization entries shown in lines 1a through 1j and 4a through 4h are shown as a debit or credit to the ADIT account from which it is being amortized. The totals in line 3 and 6 is the offset recorded to the 410/411 tax expense account.*
*NOTE G: Transmission functional amortization expense determined on WS C-4 will supersede the amortization of excess and deficient ADIT included in Column N, Ln 6 of this worksheet, due to ratemaking adjustments required in the formula that are not reflected in the books.*
*NOTE H: Deficient remeasurement amounts will be recorded in 410.1 as a debit (expense) to cost of service; excess remeasurement amounts will be recorded in 411.1 as a credit to cost of service.*
*NOTE I. In the event that there are adjustments reported in column K of this worksheet that would result in changes to the initial unprotected excess or deficient ADIT amounts, AEP will provide supporting documentation for those adjustments to customers as a part of its annual update process.*
*NOTE J: The West Operating Companies maintain accounting records at the total company and functional basis and have done so since 2002. The total company and transmission functional excess and deficient balances are derived from the underlying total company and functional transactions recorded on the books and records of the West Operating Companies. Therefore, functional ADIT balances are based on the functional book balances that underlie them. The determination of excess and deficient balances on both a total company and transmission functional basis are based on a remeasurement of the individual component ADIT balances making up those total ADIT balances, which is performed at the time of the tax change. The sum of the individual re-measurements comprise the total amount of net excess or deficient ADIT on a total company and transmission functional basis. While the ADIT worksheets C-1 and C-2 utilize the total company ADIT balances and allocate them using formula-developed allocators, the related excess/deficient ADIT balances reflect the transmission functional book balances and do not rely on allocation in the formula.*

*GENERAL*

*NOTE:*

*This worksheet will summarize remeasurement adjustments in ADIT Accounts for both the total company and transmission function required by changes in either federal or state income tax rates and/or apportionment factors that give rise to Excess/Deficient ADIT. A new sheet will be included in the working formula for each change to tax rates or apportionment factors that may occur while this formula rate is in effect. New pages will be designated by incrementing the suffix letter in the workpaper name (i.e. C-5-A, C-5-B, etc.). Lines may be added as necessary to reflect the specifics of the remeasurement required by the tax change.*

*NOTE 1* *___{TAX CHANGE LEGISLATION}_____ required {PROVIDE DESCRIPTION OF CHANGE IN TAX RATE OR OTHER CHANGE}.*

*NOTE 2:* *Amount of Remeasurement in Column E will be based on supporting workpapers showing the initial remeasurement of individual ADIT items in each tax deferral account, and will indicate whether each remeasured ADIT item will be treated as protected or unprotected. The resulting totals will be shown on this worksheet for each ADIT account.*

*NOTE 3:* *The remeasurement calculation may not equal ___% of the _{DATE OF REMEASUREMENT}_____ deferral balance because of specific ADIT items that are not subject to remeasurement, are excludable from the excess/deficient balances recoverable in this formula, and/or the impact of apportionment factors in the calculation,*

*NOTE 4:* *[NOTES/EXPLANATIONS OF AMOUNTS REPORTED IN COLUMN G IF NECESSARY.]*

*NOTE 5:* *Ties to each Operating Companies' Worksheet C-5, Column F, showing the initial remeasurement value determined as a result of the _(TAX CHANGE LEGISLATION).*

*NOTE 6:* *This column represents the total of specific ADIT balances in each ADIT account that are included in the initial remeasurement but which are then excluded from the recoverable excess or deficient balances because the underlying ADIT item is not allocated in the formula. It will also include adjustments made after the initial remeasurement as identified by the AEP tax department.*

*NOTE 7:* *The transmission functional amount in this column will be the amount that is recoverable in the formula rate, based on the book remeasurement recorded on books and then adjusted for the excess or deficient amounts of excludable ADIT differences. This net total will be recorded on worksheet C-4.*

***CALCULATION OF RECOVERABLE HEDGE GAINS/LOSSES***

39 NOTE: The net amount of hedging gains or losses recorded in account 427 to be recovered in this formula rate should be limited to the effective portion of pre-issuance cash flow hedges that are amortized over the life of the underlying debt issuances. The recovery of a net loss or passback of a net gain will be limited to five basis points of the total Capital Structure. Amounts related to the ineffective portion of pre-issuance hedges, cash settlements of fair value hedges issued on Long Term Debt, post-issuance cash flow hedges, and cash flow hedges of variable rate debt issuances are not recoverable in this formula and are to be recorded in the "Excludable" column below.

| True-Up Adjustment with Interest | - |
| Less Over (Under) Recovery | - |
| Total Interest | - |

**Note 1:** The monthly interest rates to be applied to the over recovery or under recovery amounts during the true-up year and the intermediate year will be determined using the monthly FERC interest rates (as determined pursuant to 18 C.F.R. Section 35.19a) posted at https://www.ferc.gov/enforcement/acct-matts/interest-rates.asp. The monthly interest rate to be applied to the over recovery or under recovery amounts each month during the rate year will equal a simple average of the 12 monthly interest rates for the intermediate year.

Note 2: An over or under collection for the Schedule 11 charge will be recovered prorata over the true-up year, held for the intermediate year and returned prorata over the rate year.

Notes
1 Include all regulatory asset amortizations and deferrals included in accounts in Transmission O&M on FERC Form 1 p. 321, ln 122. Exclude all

| | |
|---|---|
| | Distribution and Production-related items. |
| 2 | Include only regulatory asset amortizations and deferrals included in accounts in Transmission O&M approved by FERC for inclusion in cost of service. |
| 3 | Include all amortizations and deferrals of regulatory assets included in accounts in A&G expense on FERC Form 1 p. 321, ln 197, except amounts in Account 928, 930.1, and 930.2, which are accounted for on Worksheet J. |
| 4 | Include only regulatory asset amortizations and deferrals included in accounts in A&G expense approved by FERC for inclusion in cost of service. |
| 5 | See referenced FERC docket for details of Regulatory Assets approved for inclusion in rate base. Include only the Transmission functional balance for assets which have both Transmission and Distribution components. |
| 6 | Balances direct assigned to Transmission except for payroll-related balances, which will be allocated using a wages and salaries allocator. |

1. FERC effective June 1, 2018 to match the Texas depreciation rates approved in PUC Docket No. 46449 in accordance with the settlement in FERC Docket ER18-195.

2. Louisiana transmission, distribution and general depreciation rates were approved at the LA Public Service Commission session dated November 17, 1999 as per Order U-23029-A.

3. Arkansas depreciation rates were approved in 2022 per Commission Order in Docket 21-070-U. Staff rates were approved and made effective on July 1, 2022.

4. Texas depreciation rates were approved on January 14, 2022 in PUC Docket 51415, the rates were made effective on March 18, 2021.

Note 1 - These depreciation and amortization rates will not be changed absent a Section 205 or 206 filing at the Commission.

## Addendum 4 to Attachment H – Part 2

## THE AEP WEST OPERATING COMPANIES FORMULA RATE IMPLEMENTATION PROTOCOLS

The formula rate template ("Template"), and these formula rate implementation protocols ("Protocols") together comprise the filed rate ("Formula Rate") of Public Service Company of Oklahoma and Southwestern Electric Power Company (collectively "AEP West OpCos" or "AEP") for transmission revenue requirement determinations under the Southwest Power Pool ("SPP") Open Access Transmission Tariff ("SPP Tariff"). AEP shall follow the instructions specified in the Formula Rate to calculate annually its net annual transmission revenue requirement, as set forth in the Template ("Net Revenue Requirement"). The Net Revenue Requirement shall be determined for January 1 to December 31 of a given calendar year (the "Rate Year"). The Net Revenue Requirement will include revenue requirements and rate calculations for SPP Schedule 1 NITS, Schedule 9 Zonal NITS, and Schedule 11 (Base Plan). The Formula Rate shall become effective for recovery of AEP's Net Revenue Requirement upon the effective date for incorporation into the SPP Tariff through a filing with the Federal Energy Regulatory Commission ("FERC" or "Commission") under Section 205 of the Federal Power Act ("FPA"), 16 U.S.C. § 824d.

### Section 1. Annual Projection

a. No later than October 31 preceding a Rate Year, and each subsequent Rate Year, AEP shall determine its projected Net Revenue Requirement for the upcoming Rate Year in accordance with the Formula Rate ("Annual Projection"). The Annual Projection shall include the True-Up Adjustment described and defined in Section 2 below, if applicable. Upon determining the Annual Projection, AEP shall cause an electronic version of the Annual Projection to be posted in both a Portable Document Format

("PDF") and a data-populated formula rate in native format with all formulae/links intact at a publicly accessible location on SPP's internet website and OASIS, and make a corresponding informational filing at FERC. The date on which the posting occurs shall be that year's "True-Up Publication Date."

b. The posting of the Annual Projection shall:

(i.) Provide the Formula Rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used in the projected Net Revenue Requirement;

(ii.) Include all inputs in sufficient detail to identify the components of AEP's projected Net Revenue Requirement, explanations of the bases for the projections and input data, including workpapers in native software application format, to enable Interested Parties[1] to replicate the calculation of the projected Net Revenue Requirement;

(iii.) With respect to any Accounting Changes (as that term is defined in Section 3.e.iii)

A. Identify any Accounting Changes including:

i. The initial implementation of an accounting standard or policy;

ii. The initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

iii. Correction of errors and prior period adjustments that impact the projected Net Revenue Requirement calculation;

iv. The implementation of new estimation methods or policies that

change prior estimates; and

v. Changes to income tax elections;

B. Identify items included in the projected Net Revenue Requirement at an amount other than on a historic cost basis (e.g., fair value adjustments);

C. Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs to the projected Net Revenue Requirement; and

D. Provide, for each item identified pursuant to Section 1.b.iii.A - C of these Protocols, a narrative explanation of the individual impact of such changes on the projected Net Revenue Requirement.

(iv.) Include the following information related to affiliate cost allocation:

A. A detailed description of the methodologies used to allocate and directly assign costs between AEP and its affiliates by service category or function, including any changes to such cost allocation methodologies from the prior year, and the reasons for those changes; and

B. The magnitude of such costs that have been allocated or directly assigned between AEP and each affiliate by service category or function.

c. If the date for making the posting of the Annual Projection should fall on a weekend or a holiday recognized by FERC, then the posting shall be made no later than the

next business day.[2] Within five (5) calendar days of the posting, AEP shall provide notice of such posting via the SPP email subscription ("SPP Exploder List"). Interested Parties can subscribe to the SPP Exploder List on the SPP website.

d. Together with the posting of the Annual Projection, AEP shall cause to be posted on the SPP internet website and OASIS, and distributed to the SPP Exploder List, the time, date, location, and remote-access information for a stakeholder meeting with Interested Parties in order for AEP to explain its Annual Projection and to provide Interested Parties an opportunity to seek information and clarifications regarding the Annual Projection ("Annual Projection Meeting"). The Annual Projection Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business days after the posting of the Annual Projection. Notice of the Annual Projection Meeting shall be provided via the SPP Exploder List no less than seven (7) calendar days prior to the meeting. AEP will provide remote access to the Annual Projection Meeting in order to ease burdens (e.g. travel costs) to ensure all Interested Parties have the opportunity to participate.

e. To the extent AEP agrees to make changes in the Annual Projection for a given Rate Year, such revised Annual Projection shall be promptly posted at a publicly accessible location on SPP's internet website and OASIS, and e-mailed to the SPP Exploder List. Changes posted prior to November 30 preceding the Rate Year, or the next business day if November 30 is not a business day (or such later date as can be accommodated under SPP's billing practices), shall be reflected in the Annual Projection for the Rate Year; changes posted after that date will be reflected, as appropriate, in the True-Up Adjustment for the Rate Year.

f. The Annual Projection, including the True-Up Adjustment, for each Rate Year shall be subject to review, challenge, true-up, and refunds or surcharges with interest, to the extent and in the manner provided in these Protocols.

---

1 As used in these Protocols, "Interested Parties" shall include but not be limited to: (i) any Eligible Customer under the SPP Tariff; (ii) any regulatory agency with rate jurisdiction over a public utility located within the SPP footprint; (iii) any consumer advocate authorized by state law to review and contest the rates for any such public utility; and (iv) any party with standing under FPA section 205 or section 206.

---

2 For the purposes of these Protocols, if any deadline included in these Protocols should fall on a weekend or a holiday recognized by FERC, then the deadline shall be extended to the next business day.

**Section 2. True-Up Adjustment**

AEP will calculate the amount of under- or over-collection of its actual Net Revenue Requirement during the preceding Rate Year ("True-Up Adjustment") after the FERC Form No. 1 data for that Rate Year has been filed with the Commission. The True-Up Adjustment shall be the sum of the True-Up Adjustment Over/Under Recovery as determined in Section 2(a) and the Interest on the True-Up Adjustment Over/Under Recovery as determined in Section 2(b):

a. AEP's projected Net Revenue Requirement collected during the previous Rate Year[3] will be compared to AEP's actual Net Revenue Requirement for the previous Rate Year calculated in accordance with AEP's Formula Rate and based upon (i) AEP's FERC Form No. 1 for that same Rate Year, (ii) any FERC orders specifically applicable to AEP's calculation of its annual revenue requirement, (iii) the books and records of AEP (which shall be maintained consistent with the FERC Uniform System of Accounts ("USofA")), (iv) FERC accounting policies and practices

applicable to the calculation of annual revenue requirements under formula rates, and (v) any aspects of the SPP Tariff Governing Documents that apply to the calculation of annual revenue requirements under individual transmission owner formula rates,[4] to determine any over- or under-recovery ("True-Up Adjustment Over/Under Recovery").

b. Interest on any True-Up Adjustment Over/Under Recovery shall be calculated separately for the SPP Zonal NITS Annual Transmission Revenue Requirement (ATRR), Base Plan ATRR (Base Plan Upgrades) and Schedule 1 Scheduling, System Control, and Dispatch Service (Schedule 1). For the Zonal NITS ATRR and Schedule 1 NITS True-Up Adjustments, monthly interest will be calculated on the Over/Under Recovery during each month of the True-Up Year and for the first six months following the True-Up Year (during the Intermediate Year). The Zonal NITS ATRR and Schedule 1 NITS True-Up adjustments, along with the interest calculated during the eighteen (18) months as described above will be invoiced or refunded to customers all at once during the July billing. For the Base Plan ATRR True-Up Adjustment, monthly interest will be calculated on the Over/Under Recovery during each month of the True-Up Year, during each month of the succeeding year ("Intermediate Year") (12 months-True-up Year plus one), and during each month of the year in which the true-up will be billed and collected ("Projection Year") (True-Up Year plus two). The total true-up adjustment and interest for the 36 months described above will be added to (or deducted from) each Base Plan Project on a pro rata basis for determination of the Base Plan ATRR during the 12 months of the Projection Year.

For example, the 2018 True-Up adjustment will be calculated in 2019 and will be billed or credited to customers during 2020. The True-Up adjustments will include interest calculations over a 36-month period, including the 12 months during the True-Up year (2018), the 12 months during the Intermediate Year (2019) and the 12 months during the Projection Year (2019) in which the True-Up Adjustment is remitted to customers.

c. The rates used to calculate interest for True-Up Adjustments will be sourced directly from the FERC website in accordance with 18 C.F.R. § 35.19a. The monthly interest rate used to calculate interest during each month of the Projection Year will be based on an average of the 12 monthly interest rates during the Intermediate Year. Interest True-up adjustments will be compounded quarterly in accordance with 18 C.F.R. § 35.19a.

---

[3] If the initial use of this Formula Rate covers only part of a calendar year, the initial projected annual Net Revenue Requirement will be divided by 12 to calculate the monthly projected cost of service to be collected each month, or portion thereof, it is effective that first year. Similarly, the actual Net Revenue Requirement will be divided by 12 to calculate the actual cost of service to be collected during those same months of that year. Similar calculations of projected Net Revenue Requirement and actual Net Revenue Requirement will be made for the months prior to the effective date of this Formula Rate using the previous formula rate in effect during those months. The actual Net Revenue Requirements computed under each of the two formula rate periods that initial Rate Year will be added together to obtain the total actual Net Revenue Requirement. The first True-up Adjustment will compare this total actual Net Revenue Requirement to the Net Revenue Requirement collected under the two formulas for that initial Rate Year.

[4] SPP Tariff Governing Documents include the SPP Tariff, Bylaws, Criteria, and Membership Agreements.

**Section 3. Annual Update**

a. On or before May 25 following each Rate Year, AEP shall calculate its actual Net Revenue Requirement and the True-Up Adjustment as described in Section 2 ("Annual Update") for such Rate Year and, together with such other information described in this Section 3, shall cause such Annual Update to be posted, in both a PDF and a data-populated formula rate in native format with all formulae/links intact, at a publicly accessible location on SPP's internet website and OASIS, and make a corresponding informational filing at FERC. Within five (5) calendar days of such posting, SPP shall provide notice of such posting via the SPP Exploder List.

b. If the date for making the Annual Update posting should fall on a weekend or a holiday recognized by the FERC, then the posting shall be due on the next business day.

c. The date on which the posting occurs shall be that year's "Annual Update Publication Date."

d. Together with the posting of the Annual Update, AEP shall cause to be posted on the SPP website and OASIS the time, date, location, and remote-access information for a stakeholder meeting with Interested Parties in order for AEP to explain its Annual Update and to provide Interested Parties an opportunity to seek information and clarifications regarding the Annual Update ("Annual Update Meeting"). Notice of the Annual Update Meeting shall be provided via the SPP Exploder List no less than seven (7) calendar days prior to the meeting. The Annual Update Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business

days after the Annual Update Publication Date. AEP will provide remote access to the Annual Update Meeting in order to ease burdens (e.g. travel costs) to ensure all Interested Parties have the opportunity to participate.

e. The Annual Update posting for the Rate Year:

(i.) Shall provide, via the Formula Rate worksheets and associated workpapers in native software application format, sufficiently detailed supporting documentation for data (and all adjustments thereto or allocations thereof) used in the Formula Rate that are not stated in the FERC Form No. 1;[5]

(ii.) Shall provide sufficient detail and sufficient explanation to enable Interested Parties to replicate the calculation of the Annual Update results from the FERC Form No. 1 and verify that each input to the Template is consistent with the requirements of the Formula Rate;

(iii.) Shall identify:

A. Any change in accounting that affects inputs to the Template or the resulting charges billed under the Formula Rate ("Accounting Change"), including:

i. The initial implementation of an accounting standard or policy;

ii. The initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

iii. Correction of errors and prior period adjustments that impact the True-Up Adjustment calculation;

iv. The implementation of new estimation methods or policies that change prior estimates; and

v. Changes to income tax elections;

B. Any items included in the Annual Update at an amount other than on a historic cost basis (e.g., fair value adjustments);

C. Any reorganization or merger transaction during the previous year and an explanation of the effect of the accounting for such transaction(s) on inputs to the Annual Update;

D. For each item identified pursuant to Sections 3.e.iii.A - C of these Protocols, the individual impact (in narrative format) of such changes on the Annual Update.

(iv.) Shall be subject to review and challenge in accordance with the procedures set forth in Sections 4, 5, and 6 of these Protocols.

(v.) Shall be subject to review and challenge in accordance with the procedures set forth in these Protocols with respect to the prudence of any costs and expenditures included for recovery in the Annual Update; provided, however, that nothing in these Protocols is intended to modify the Commission's applicable precedent with respect to the burden of going forward or burden of proof under formula rates in such prudence challenges; and

(vi.) Shall not seek to modify the Formula Rate and shall not be subject to

challenge by any Interested Party seeking to modify the Formula Rate (i.e., any modifications to the Formula Rate will require, as applicable, an FPA section 205 or section 206 filing or initiation of a section 206 investigation).

f. The following Formula Rate inputs shall be stated values to be used in the Formula Rate until changed pursuant to an FPA section 205 or section 206 proceeding: (i) rate of return on common equity ("ROE"); and (ii) the depreciation and/or amortization rates as set forth in Worksheet T included with the Formula Rate template.

g. **Example - Timelines for 2018 Annual Projection and 2019 Annual Update**: On or before October 31, 2017, AEP will determine the projected Net Revenue Requirement for the 2018 Rate Year. AEP will post the Annual Projection for the 2018 Rate Year in accordance with Section 1 above. On or before May 25, 2019, AEP will post its Annual Update, consisting of the actual Net Revenue Requirement and True-Up Adjustment for the 2018 Rate Year determined pursuant to Section 2 above. Such True-Up Adjustment for the Zonal NITS ATRR and Schedule 1 NITS will be reflected in July 2019 bill. The Base Plan True-Up will be reflected in the Annual Projection of the Base Plan Project Revenue Requirements for the 2020 Rate Year posted on or before October 31, 2019.

---

5 It is the intent of the Formula Rate, including the supporting explanations and allocations described therein, that each input to the Formula Rate for purposes of determining the actual Net Revenue Requirement for a given Rate Year will be either taken directly from the FERC Form No. 1 or reconcilable to the FERC Form No. 1 by the application of clearly identified and supported information. If the referenced form is superseded, the successor form(s) shall be utilized and supplemented as necessary to provide equivalent information as that provided in the superseded form. If the

referenced form is discontinued, equivalent information as that provided in the discontinued form shall be utilized.

**Section 4. Annual Review Procedures**

Each Annual Update and Annual Projection shall be subject to the following review procedures ("Annual Review Procedures"):

a. Interested Parties shall have up to the later of two-hundred-ten (210) calendar days after the applicable Publication Date, or thirty (30) calendar days after the receipt of all responses to timely submitted information requests (unless such period is extended with the written consent of AEP or by FERC order) ("Review Period"), to review the calculations and to notify AEP in writing, which may be made electronically, of any specific challenges to the Annual Update or Annual Projection ("Preliminary Challenge"), including challenges related to Accounting Changes. An Interested Party submitting a Preliminary Challenge must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. Upon receipt of a Preliminary Challenge, AEP will endeavor to send the Preliminary Challenge to SPP within five (5) business days. AEP shall request that SPP post all Preliminary Challenges at a publicly accessible location on SPP's internet website and OASIS, and that a link to the website will be e-mailed to the SPP Exploder List.

b. In the event of a Preliminary Challenge, AEP will appoint a senior representative to work with the Interested Party (or its representatives) toward a resolution of the dispute.

c. AEP shall respond in writing to a Preliminary Challenge(s) within twenty (20) business days of receipt, and its response shall notify the challenging party of the extent to which AEP agrees or disagrees with the challenge. If AEP disagrees with the Preliminary Challenge, it will provide the Interested Party with an explanation supporting the challenged inputs, explanations, allocations, calculations, or other information. AEP shall promptly cause to be posted its responses to all Preliminary Challenges at a publicly accessible location on SPP's internet website and OASIS, and a link to the website will be e-mailed to the SPP Exploder List. Provided however, that Preliminary Challenges and responses to Preliminary Challenges that include material deemed by AEP to be confidential information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by AEP and the requesting party.

d. AEP shall respond to all Preliminary Challenges submitted during the Review Period by no later than thirty (30) calendar days after the end of the Review Period.

e. Interested Parties shall have up to one-hundred-fifty (150) calendar days after each annual Publication Date (unless such period is extended with the written consent of AEP or by FERC order) to serve reasonable information requests on AEP ("Discovery Period").

f. Information requests shall be limited to what is necessary to determine: (i) the extent, effect, or impact of an Accounting Change; (ii) whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with the Protocols (as provided above in Section 2.a); (iii) the proper application of the Template and procedures in the Protocols; (iv) the accuracy of data and consistency

with the Formula Rate of the charges shown in the Annual Update or Annual Projection; (v) the prudence of the actual costs and expenditures, including procurement methods and cost control methodologies; (vi) the effect of any change to the underlying USofA or FERC Form No. 1; and (vii) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the Formula Rate. The information requests shall not otherwise be directed to ascertaining whether the Formula Rate is just and reasonable. Information requests shall not solicit information concerning costs or allocations where the costs or allocation methods have been determined to be appropriate in a final order issued by the Commission or by delegation in the context of prior AEP Annual Updates, except that such information requests shall be permitted if they (i) seek to determine if there has been a change in circumstances, (ii) are in connection with corrections pursuant to Section 6 of these Protocols, or (iii) relate to costs or allocations that have not previously been challenged and adjudicated by FERC.

g. AEP shall make a good faith effort to respond to reasonable information requests pertaining to the Annual Update or Annual Projection within fifteen (15) business days of receipt of such requests. AEP shall respond to all reasonable information requests no later than thirty (30) calendar days after the end of the Discovery Period. AEP will cause to be posted on the SPP website and OASIS all information requests from Interested Parties and AEP's response(s) to such requests, and a link to the website will be e-mailed to the SPP Exploder List. Provided however, that information and document requests and responses to information and document requests that include material deemed by AEP to be confidential information will

not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by AEP and the requesting party. Voluminous materials that are unduly burdensome to provide by other means may be made available at a physical AEP site.

h. AEP shall not claim that responses to information and document requests provided pursuant to these Protocols are subject to any settlement privilege in any subsequent FERC proceeding addressing AEP's Annual Update or Annual Projection.

i. To the extent AEP and any Interested Party(ies) are unable to resolve disputes related to information requests submitted in accordance with these Annual Review Procedures, AEP or the Interested Party may petition the FERC to appoint an Administrative Law Judge as a discovery master to resolve the discovery dispute(s) in accordance with these Protocols and consistent with the FERC's discovery rules.

j. Preliminary Challenges or Formal Challenges (as described in Sections 4 and 5) related to Accounting Changes shall be treated in the same manner under these Protocols as other challenges to the Annual Update or Annual Projection. Failure to make a Preliminary Challenge with respect to an Accounting Change in an Annual Update or Annual Projection shall not act as a bar with respect to a Formal Challenge with respect to that Annual Update or Annual Projection provided that the Interested Party submitted a Preliminary Challenge with respect to one or more other issues. Nor shall such failure bar a subsequent Preliminary Challenge related to a subsequent Annual Update or Annual Projection to the extent such Accounting Change affects the subsequent Annual Update or Annual Projection.

k. If a change made by AEP to its accounting policies, practices, or procedures, or the

application of the Formula Rate, is found by the FERC to be unjust, unreasonable, or unduly discriminatory or preferential, then the calculation of the charges to be assessed during the Rate Year then under review, and the charges to be assessed during any subsequent Rate Years, including any True-up Adjustments, shall not include such change, but shall include any remedy that may be prescribed by FERC in the exercise of its discretion as of the effective date of such remedy, to ensure that the Formula Rate continues to operate in a manner that is just, reasonable, and not unduly discriminatory or preferential.

**Section 5. Resolution of Challenges**

a. Interested Parties shall have up to two-hundred-seventy (270) calendar days following the applicable Publication Date (unless such period is extended with the written consent of AEP or by FERC order), to file a challenge with the FERC ("Formal Challenge"). Such Formal Challenge shall be submitted in the same docket as the AEP informational filing and shall be served on AEP by electronic service on the date of such filing in accordance with Section 385.2010(f)(3) of the Commission's regulations. Subject to any applicable confidentiality and Critical Energy Infrastructure Information restrictions, all information and correspondence produced by AEP pursuant to these Protocols may be included in any Formal Challenge or other FERC proceeding relating to the Formula Rate. This Section 5.a in no way shall affect a party's rights under section 206 of the Federal Power Act as set forth in Section 5.g of these Protocols.

b. Formal Challenges are to be filed pursuant to these Protocols, rather than under rule 206, and shall:

(i.) Clearly identify the action or inaction which is alleged to violate the Formula Rate Template or Protocols;

(ii.) Explain how the action or inaction violates the filed rate Template or Protocols;

(iii.) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including

A. The extent or effect of an Accounting Change;

B. Whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with these Protocols;

C. The proper application of the Template and procedures in these Protocols;

D. The accuracy of the data and consistency with the Formula Rate of the charges shown in the Annual Update or Annual Projection;

E. The prudence of actual costs and expenditures;

F. The effect of any change to the underlying Uniform System of Accounts or the FERC Form No. 1; or

G. Any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the Template.

(iv.) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(v.) State whether the issues presented are pending in an existing Commission proceeding in which the filing party is a party, or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(vi.) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(vii.) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise reasonably attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(viii.) State whether the filing party utilized the Preliminary Challenge procedures described in these Protocols to dispute the action or inaction raised by the Formal Challenge, and, if not, describe why not.

c. Preliminary and Formal Challenges shall be limited to issues that may be necessary to determine: (i) the extent or effect of an Accounting Change; (ii) whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with these Protocols; (iii) the proper application of the Formula Rate and procedures in these Protocols; (iv) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual Update and Annual Projection; (v) the prudence of actual costs and expenditures; (vi) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or (vii)

any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

d. Failure to raise an issue in a Preliminary Challenge shall not bar an Interested Party from raising that issue in a Formal Challenge, provided the Interested Party submitted a Preliminary Challenge during the Review Period with respect to one or more other issues. Failure to pursue an issue through a Preliminary Challenge or to lodge a Formal Challenge regarding any issue as to a given Annual Update shall bar pursuit of such issue with respect to that Annual Update, but shall not bar pursuit of such issue or the lodging of a Formal Challenge as to such issue as it relates to a subsequent Annual Update.

e. Any response by AEP to a Formal Challenge must be submitted to the FERC within thirty (30) calendar days of the date of the filing of the Formal Challenge, and shall be served on the filing party(ies) and the SPP Exploder List on the date of such filing.

f. In any Formal Challenge proceeding concerning a given year's Annual Update (including corrections), Annual Projection, or Accounting Change(s), AEP shall demonstrate the justness and reasonableness of the rate resulting from its application of the Formula Rate by demonstrating, with respect to the issue being challenged, that it has correctly applied the terms of the Formula Rate consistent with these Protocols and that it followed the applicable requirements and procedures in the Formula Rate. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

g. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of AEP to file unilaterally, pursuant to section 205 of the FPA and the regulations thereunder, an application seeking changes to the Formula Rate or to any of the stated value inputs requiring a section 205 filing under these Protocols (including, but not limited to, ROE and depreciation and amortization rates), or the right of any other party or the Commission to seek such changes pursuant to section 206 of the FPA and the regulations thereunder.

h. AEP may, at its discretion and at a time of its choosing, make a limited filing pursuant to section 205 to modify stated values in the Formula Rate (i) for amortization and depreciation rates, or (ii) to correct obvious errors or omissions in the Formula Rate such as would result from changes to the FERC Form No. 1. The sole issue in any such limited section 205 proceeding shall be whether such proposed change(s) is just and reasonable, and it shall not address other aspects of the Formula Rate or impose upon AEP any burden with respect to such other aspects of the Formula Rate.

**Section 6. Changes to Annual Updates**

If AEP determines or concedes that corrections to the Annual Update are required, whether under Sections 4 or 5 of these Protocols, including but not limited to those requiring corrections to its FERC Form No. 1, or input data used for a Rate Year that would have affected the Annual Update for that Rate Year, such corrections shall be reflected as adjustments in the Annual Update for the next Rate Year, with interest calculated in accordance with the FERC Interest Rate (as determined pursuant to 18 C.F.R. § 35.19a). This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments.

**Section 7. Joint Meeting of Transmission Owners**

Each year AEP shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members in order to arrange a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

## Addendum 5 To Attachment H Part 1

## Monthly Demand Charge Calculation For Zone 11
## Network Integration Transmission Service

This Addendum to Attachment H sets forth the component of the monthly Demand Charge for SPS' revenue requirement, which is applicable in Zone 11 for Network Customers taking Network Integration Transmission Service ("NITS") under Schedule 9 to this Tariff.

### Charges for Compensation to SPS

The monthly NITS Demand Charge to Network Customers for compensation to SPS shall be determined by multiplying the Network Customer's Monthly Network Load, determined in accordance with the provisions of Section 34.4, expressed in MW, by the rate for NITS then in effect pursuant to the Formula Rate as set out in this Addendum 5 to Attachment H. All capacity quantities used in determining the Network Customer's Monthly Network Load shall be adjusted to the transmission system input level, i.e., shall include the transmission capacity amount associated with any applicable losses.

**PUBLIC SERVICE COMPANY**

**General Notes: a) References to data from FERC Form 1 are indicated as: page#.line#.col#.**

| Note Letter | |
|---|---|
| A | The revenues credited shall include amounts received directly from the SPP for service under this tariff reflecting SPS's integrated transmission facilities. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or other facilities revenues shall be excluded from the definition of transmission facilities under this tariff shall not be included as revenue credits. Revenue from coincident peak loads included in the DIVISOR are also not included as revenue credits unless this revenue is offset by a corresponding expense. See Worksheet B for details. |
| B | The annual and monthly net and gross plant carrying charges on page 2 are to be used to compute the revenue requirement for directly assigned facilities, any Base Plan Upgrades, distribution facilities, |

and radial lines.

C This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. Worksheet R shows the calculation of the additional revenue requirements for each project receiving incentive rate treatment, as accepted by FERC by a separate docket. These individual additional revenue requirements shall be summed, for the then current year, and included here.

D Reflects the transmission related portion of balances in Accounts 281, 282, 283, 190, and 255 as adjusted by any amounts in contra accounts identified as regulatory assets or liabilities related to FASB 106, 109, 133,158 or FASB Interpretation No. 48. Balance of Account 255 is reduced by prior flow throughs and completely excluded if the utility chose to utilize amortization of tax credits against taxable income as discussed in Note M.

The calculation of ADIT for both the true-up and the annual projection will be performed in accordance with IRS regulation Section 1.167(l)-1(h)(6). The Annual True-Up for a given year will use the same methodology that was used to project that year's rates. *(Except for ADIT Proration which is described on Table 21A of the template.)*

E Includes any incentive Construction Work in Progress (CWIP), any related Allowance for Funds Used During Construction (AFUDC), any unamortized balances related to the recovery of abandoned incentive plant costs, any extraordinary property losses and any related depreciation and amortization expense amounts.

Formula amounts for all of the foregoing items will remain at $0 until approved by FERC under a separate docket.

F Includes only transmission related or functionally booked as transmission land held for future use.

G Cash Working Capital will be set at and remain $0 until such time as SPS files and receives

| | |
|---|---|
| | FERC approval for a lead/lag study. |
| H | Equal to the balance of Network Facilities Upgrades Credits, net of accumulated depreciation, due transmission customers that made lump-sum payments towards the construction of Network Transmission Facilities consistent with Paragraph 657 of Order 2003-A. Excludes interest since interest is added to the revenue requirement on line 140. |
| I | The base plan upgrade revenue requirement will be updated annually in the Annual Update. The BPU revenue requirement will be a projected amount with a true-up to actual adjustment. The updated revenue requirement will be provided to the SPP no later than November 15 for billings effective January 1. |
| J | (Reserved for future use) |
| K | Includes all Regulatory Commission expense itemized in FERC Form 1 at p. 350-351(h). Show in Worksheet H how these expense items are assigned to transmission. FERC Assessment Fees, General Advertising, and Industry Association Dues and Research and Developments costs recorded in 930.2 shall not be assigned to transmission. A & G expenses shall Include specific transmission safety-related advertising and transmission siting advertising costs. The annual PBOP expense amount will be based on the PBOP expense amount reported in SPS's most recent annual actuarial valuation report as of the date of SPS's Annual Update. SPS will provide a copy of that actuarial report as part of its Annual Update and its Annual Informational Filing to the Commission. NERC fees recorded in Acct. 928, Regulatory Commission Expenses, or in Acct. 165, Prepayments, shall be excluded from the formula. |
| L | Includes only FICA, unemployment, highway, property and other assessments charged in the current year. Gross receipts tax, taxes related to income, retail and non-transmission related taxes are excluded. |
| M | The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = |

"the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state, it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) (ln 135) multiplied by (1/1-T) . If the applicable tax rates are zero enter 0.

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | 0.00% | |
| | SIT= (Worksheet L) | 0.00% | (State Income Tax Rate or Composite SIT) |
| | p = | 0.00% | (percent of FIT deductible for state purposes) |

N Removes the dollars of plant booked to transmission plant that is excluded from the Tariff because it does not meet the Tariff's definition of Transmission Facilities, or is booked to transmission (e.g. step-up transformers) that is included in the development of OATT ancillary service rates, or is otherwise not eligible to be recovered under this Tariff.

O Enter dollar amounts. Includes service company labor. Does not include contract labor.

P Includes the amortization of any excess/deficient deferred income taxes resulting from changes to income tax laws, income tax rates (including changes in apportionment) and other actions taken by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/(1-T)).

| | ****ACTUAL**** | | **SOUTHWESTERN PUBLIC SERVICE COMPANY** | | | | |

**General Notes: a) References to data from FERC Form 1 are indicated as: page#.line#.col#.**

| Note Letter | |
|---|---|
| A | The revenues credited shall include amounts received directly from the SPP for service under this tariff reflecting SPS's integrated transmission facilities. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or other facilities revenues shall be excluded from the definition of transmission facilities under this tariff shall not be included as revenue credits. Revenue from coincident peak loads included in the DIVISOR are also not included as revenue credits unless this revenue is offset by a corresponding expense. See Worksheet B for details. |
| B | The annual and monthly net and gross plant carrying charges on page 7 are to be used to compute the revenue requirement for directly assigned facilities, any Base Plan Upgrades, distribution facilities, and radial lines. This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. |
| C | Worksheet R shows the calculation of the additional revenue requirements for each project receiving incentive rate treatment, as accepted by FERC by a separate docket. These individual |

additional revenue requirements shall be summed, for the then current year, and included here.

D Reflects the transmission related portion of balances in Accounts 281, 282, 283, 190, and 255 as adjusted by any amounts in contra accounts identified as regulatory assets or liabilities related to FASB 106, 109, 133,158 or FASB Interpretation No. 48. Balance of Account 255 is reduced by prior flow throughs and completely excluded if the utility chose to utilize amortization of tax credits against taxable income as discussed in Note M.

The calculation of ADIT for both the true-up and the annual projection will be performed in accordance with IRS regulation Section 1.167(l)-1(h)(6). The Annual True-Up for a given year will use the same methodology that was used to project that year's rates. *(Except for ADIT Proration which is described on Table 21A of the template.)*

E Includes any incentive Construction Work in Progress (CWIP), any related Allowance for Funds Used During Construction (AFUDC), any unamortized balances related to the recovery of abandoned incentive plant costs, any extraordinary property losses and any related depreciation and amortization expense amounts.

Formula amounts for all of the foregoing items will remain at $0 until approved by FERC under a separate docket.

F Includes only transmission related or functionally booked as transmission land held for future use.

G Cash Working Capital will be set at and remain $0 until such time as SPS files and receives FERC approval for a lead/lag study.

H Equal to the balance of Network Facilities Upgrades Credits, net of accumulated depreciation, due transmission customers that made lump-sum payments towards the construction of Network Transmission Facilities consistent with Paragraph 657 of Order 2003-A. Excludes interest since interest is added to the revenue requirement on line 276.

I The base plan upgrade revenue requirement will be updated annually in the Annual Update. The BPU revenue requirement will be a projected amount with a true-up to actual adjustment. The updated revenue requirement will be provided to the SPP no later than November 15 for billings effective

January 1.

J (Reserved for future use)

K Includes all Regulatory Commission expense itemized in FERC Form 1 at 350-351(h). Show in Worksheet H how these expense items are assigned to transmission.
FERC Assessment Fees, General Advertising, and Industry Association Dues and Research and Developments costs recorded in 930.2 shall not be assigned
to transmission. A & G expenses shall Include specific transmission safety-related advertising and transmission siting advertising costs.
The annual PBOP expense amount will be based on the PBOP expense amount reported in SPS's most recent annual actuarial valuation report as of the date of SPS's Annual Update. SPS will provide a copy of that actuarial report as part of its Annual Update and its Annual Informational Filing to the Commission.
NERC fees recorded in Acct. 928, Regulatory Commission Expenses, or in Acct. 165, Prepayments, shall be excluded from the formula.
Includes only FICA, unemployment, highway, property and other assessments charged in the current year.

L Gross receipts tax, taxes related to income, retail and non-transmission related taxes are excluded.

M The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p =
"the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state, it must attach a
work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that
elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce
rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f)
(ln 271) multiplied by (1/1-T) . If the applicable tax rates are zero enter 0.

Inputs Required: FIT = 0.00 %

| | | | |
|---|---|---|---|
| | SIT= (Worksheet L) | 0.00 % | (State Income Tax Rate or Composite SIT) |
| | p = | 0.00 % | (percent of FIT deductible for state purposes) |

| | |
|---|---|
| N | Removes the dollars of plant booked to transmission plant that is excluded from the Tariff because it does not meet the Tariff's definition of Transmission Facilities, or is booked to transmission (e.g. step-up transformers) that is included in the development of OATT ancillary service rates, or is otherwise not eligible to be recovered under this Tariff. |
| O | Enter dollar amounts. Includes service company labor. Does not include contract labor. |
| P | Includes the amortization of any excess/deficient deferred income taxes resulting from changes to income tax laws, income tax rates (including changes in apportionment) and other actions taken by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/(1-T)). Amoritizations of excess/deficient deferred income taxes resulting from the enactment of the Tax Reform and Jobs Act will be included beginning January 1, 2018 (with the 2018 True-Up) |

| Line No. | | (a) Total | (b) Adjustments | (c) Adjusted Total Amount |
|---|---|---|---|---|
| 4 | Amortization of Gain on the Sale (Allocated to Transmission) (Note 1) | | | $ - |
| 5 | Gain on disposition of property (Other Related) | | | $ - |
| 6 | Total 421.1 (FF1, p. 114-117, ln 40. (c) (or other applicable acct) | $ - | $ - | **$ -** |

Note 1: In prior transactions, on a case-by-case basis, the Public Utilities Commission of Texas (PUCT) has required SPS to credit to SPS's Texas retail ratepayers a specified percentage of gains on SPS's disposition of certain property. Effective January 1, 2016, for each transmission sale or transfer transaction resulting in a gain recorded in Account 421.1 (gain on disposition of property) or other applicable account, the amount of the gain included in Column (c) on Lines 1 and 4 for that transaction will equal the (i) total amount of the gain for that transaction recorded in Account 421.1 or other applicable account, (ii) multiplied by the Texas retail gain sharing percentage specified by the PUCT for that transaction.

83 Description of Revenue Types:

| | | |
|---|---|---|
| 84 | Ancillary | Ancillary services includes regulation & frequency, control & dispatch, voltage |
| 85 | | control, reactive, spinning reserve, scheduling and generation step-up. |
| 86 | Divisor | Load associated with these revenues are included in the formula divisor. |
| 87 | Credit | Revenue credit because load not included in divisor. |

88 Note 2 - SPP point to point revenues are being revenue credited here because SPP will not revenue credit these revenues to LSEs.

Notes: 1) Column J is the difference between projected monthly and actual monthly activity (Column I minus Column F). Specifically, if projected and actual activity are both positive, a negative in Column J represents over-projection (amount of projected activity that did not occur) and a positive in Column J represents under-projection (excess of actual activity over projected activity). If projected and actual activity are both negative, a negative in Column J represents under-projection (excess of actual activity over projected activity) and a positive in Column J represents over-projection (amount of projected activity that did not occur).

2) Column K preserves proration when actual monthly and projected monthly activity are either both increases or decreases. Specifically, if Column J is over-projected, enter Column G x [Column I/Column F]. If Column J is under-projected, enter the amount from Column G and complete Column L). In other situations, enter zero.

3) Column L applies when (1) Column J is under-projected AND (2) actual monthly and projected monthly activity are either both increases or decreases. Enter the amount from Column J. In other situations, enter zero.

4) Column M applies when (1) projected monthly activity is an increase while actual monthly activity is a decrease OR (2) projected monthly activity is a decrease while actual monthly activity is an increase. Enter actual monthly activity (Col I). In other situations, enter zero.

5) Column N is computed by adding the prorated monthly activity, if any, from Column K to 50 percent of the portion of monthly activity, if any, from Column L or M to the balance at the end of the prior month. The activity in columns L and M is multiplied by 50 percent to reflect averaging of rate base to the extent that the proration requirement has not been applied to a portion of the monthly activity.

6) The methodology to remove double averaging from the true-up ADIT Proration calculation, is effective June 27, 2018.

7) Excess/deficient ADIT resulting from the enactment of the Tax Reform and Jobs Act is included beginning January 1, 2018 (with the 2018 True-Up)

**Worksheet F.1 - Unfunded Reserves**

Projected for Billing Year = YYYY

| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) | (11) |
|---|---|---|---|---|---|---|---|---|---|---|
| List of all reserves: | FERC Account for Accrual/Balance | Beginning Balance | Ending Balance | Average Balance | Enter 1 if NOT in a trust or reserved account, enter zero (0) if included in a trust or reserved account | Enter 1 if the accrual account is included in the formula rate, enter (0) if the accrual account is NOT included in the formula rate | Enter the percentage paid for by customers, 1 less the percent associated with an offsetting liability on the balance sheet | Allocation (Plant or Labor Allocator) | Allocation Factor | Allocated to Transmission |
| | | | | - | | | | | | - |
| | | | | - | | | | | | - |
| | | | | - | | | | | | - |
| | | | | - | | | | | | - |
| | | | | - | | | | | | - |
| | | | | - | | | | | | - |
| Total Proj. | | | | - | | | | | | - |

Notes:

The Formula Rate shall include a credit to rate base for each unfunded reserve. An unfunded reserve is a reserve where an escrow, trust, or restricted account has not been established for a fund whose balance is collected from customers through cost accruals to accounts that are recovered under the Formula Rate. Each unfunded reserve will be included on the lines above. The allocator in Col. (9) will be the same allocator used in the Formula Rate for the cost accruals to the account that is recovered under the Formula Rate

63 Note 1: Worksheet Q will remain blank until such time that SPS files for and receives FERC approval
64 for including specific incentive CWIP projects in the formula rate. SPS accounting records will be the
65 source of this data.

**Worksheet R Table**

## Southwestern Public Service Company

## Worksheet R - Incentive Projects.

# I. Calculate Return and Income Taxes with hypothetical 100 basis point ROE increase.

## A. Determine "R" with hypothetical 100 basis point increase in ROE.

| Line No. | | | | | |
|---|---|---|---|---|---|
| 1 | ROE w/o incentives (From Page 5, ln 162) | | | | 10.50% |
| 2 | ROE with additional 100 basis point incentive | | | | 11.50% |
| 3 | Determine R ( cost of long term debt, cost of preferred stock and percent is from Page 5, lns 160 through162) | | | | |
| 4 | | | % | Cost | Weighted cost |
| 5 | | Long Term Debt | 0.00 % | 0.00 00 | 0.0000 |
| 6 | | Preferred Stock | 0.00 % | 0.00 00 | 0.0000 |
| 7 | | Common Stock | 0.00 % | 0.11 50 | 0.0000 |
| 8 | | | | R = | 0.0000 |

## B. Determine Return using "R" with hypothetical 100 basis point ROE increase.

| | | |
|---|---|---|
| 9 | Rate Base (From Page 3, ln 89) | - 0.00 |
| 10 | R (from A. above) | 00 |
| 11 | Return (Rate Base x R) | - |

### C. Determine Income Taxes using Return with hypothetical 100 basis point ROE increase.

| | | |
|---|---|---|
| 12 | Return (from B. above) | - |
| 13 | CIT (From Page 4, ln 131) | 0.00 % |
| 14 | Income Tax Calculation (Return x CIT) | - |
| 15 | ITC Adjustment (From Page 4, ln 137) | - |
| 16 | Income Taxes | - |

## II. Calculate Net Plant Carrying Charge Rate (Fixed Charge Rate or FCR) with hypothetical 100 basis point ROE increase.

### A. Determine Net Revenue Requirement less return and Income Taxes.

| Line No. | | | |
|---|---|---|---|
| 17 | Net Revenue Requirement (From Page 2, ln 33) | - | |
| 18 | Return (From Page 4, ln 139) | | - |
| 19 | Income Taxes (From Page 4, ln 138) | - | |
| 20 | Net Revenue Requirement, Less Return and Taxes | | - |

## B. Determine Net Revenue Requirement with hypothetical 100 basis point increase in ROE.

| | | |
|---|---|---|
| 21 | Net Revenue Requirement, Less Return and Taxes | - |
| 22 | Return (from I.B. above) | - |
| 23 | Income Taxes (from I.C. above) | - |
| 24 | Net Revenue Requirement, with 100 Basis Point ROE increase | - |
| 25 | Depreciation (From Page 4, ln 114) | - |
| 26 | Net Rev. Req, w/100 Basis Point ROE increase, less Depreciation | - |

## C. Determine FCR with hypothetical 100 basis point ROE increase.

| | | | |
|---|---|---|---|
| 27 | Net Transmission Plant (From Page 3, ln 62) | - | |
| 28 | Net Revenue Requirement, with 100 Basis Point ROE increase | - | |
| 29 | FCR with 100 Basis Point increase in ROE | 0.00% | |
| 30 | Net Rev. Req, w/100 Basis Point ROE increase, less Dep. | - | |
| 31 | FCR with 100 Basis Point ROE increase, less Depreciation | 0.00% | (use when no CIAC is associated with facilities receiving incentives) |
| 32 | FCR w/o 100 Basis Point ROE increase, less | 0.00% | (From Page 2, ln 40) |

| | | | |
|---|---|---|---|
| 33 | Depreciation FCR w/o Return, Income Taxes and Depreciation | 0.00% | (use when CIAC is associated with facilities receiving incentives) |

# Southwestern Public Service Company

**Worksheet R Table 42**

# Worksheet R - Incentive Projects.

## III. Determine the Additional Revenue Requirement and Revenue Credit for facilities receiving incentives.

### A. Facilities receiving incentives accepted by FERC in Docket No.

**The calculated Additional Revenue Requirement and Revenue Credit shown below are only valid for Investment Years matching Current Year. Values prior and subsequent to the Current Year will change as Attachment O is updated. These changes will not result in a refund or additional charge related to years prior to the Current Year.**

Beginning Balance = Investment in first year and prior year Ending Balance, thereafter
Depreciation Expense = Straight line depreciation equal to Investment divided by Useful Life
Ending Balance = Beginning Balance - Depreciation Expense
Revenue Requirement = FCR * Beginning Balance plus Depreciation Expense, adjusted by Service Month divided by 12 in the first year

Additional Rev. Requirement = Revenue Requirement w/incentives less w/o incentive for the year
Additional Revenue Credit = Revenue Requirement w/o incentives

| Line No. | | Details | | | |
|---|---|---|---|---|---|

**Notes:**

The Depreciation Rates were approved in Docket ER19-1888 (Transmission) and Docket ER15-949 (General and Intangible) and will not change absent a 205 or 206 filing.

## Addendum 5 To Attachment H Part 5

# ANNUAL FORMULA RATE IMPLEMENTATION PROCEDURES
# SOUTHWESTERN PUBLIC SERVICE COMPANY

## Section 1 Applicability

The formula rate template and these Annual Formula Rate Implementation Procedures (collectively, the "Formula Rate") comprise SPS's filed transmission rate. SPS shall follow the Formula Rate to calculate annually its Zonal Annual Transmission Revenue Requirement ("Zonal ATRR"), the monthly rate for Network Integration Transmission Service ("NITS Rate"), the rates for point-to-point transmission service ("PTP Rates"), the monthly meter charge ("Meter Charge"), the monthly radial line charge ("Radial Line Charge"), the ATRR for Base Plan Upgrades ("BPU ATRR"), and the ATRR and rates for Ancillary Services Schedule 1 – Scheduling, System Control and Dispatch Service ("Schedule 1 Rates") provided in the SPS rate zone under the Southwest Power Pool ("SPP") and Xcel Energy Operating Companies ("Xcel Energy") Open Access Transmission Tariffs ("OATTs") (collectively, the "Annual Update"). Recovery of costs associated with existing facilities and new facilities shall be consistent with the Formula Rate and Attachment AI and Attachment J, respectively, of the SPP OATT. The Formula Rate and the charges produced thereunder shall be effective for service on and after January 1, 2009. The Formula Rate shall be applicable on and after January 1 of each calendar year for service from January 1 – December 31 of each calendar year (the "Rate Year"), subject to the review, challenge and true-up procedures of this Appendix 1.

## Section 2 Annual Updates

a. No later than 5 p.m. CPT on October 1 of each year, SPS, or Xcel Energy Services Inc. ("XES") or another representative of Xcel Energy on SPS's behalf, shall determine and post its Annual Update to be effective during the next Rate Year. The Annual Update shall consist of the following:

(i) a data-populated version of the Formula Rate template setting forth the projected ATRR for the next Rate Year ("Projected ATRR") plus any applicable True-up Adjustment, as defined in Section 3.a., produced by operation of the Formula Rate;

(ii) a recalculation of the projected Base Plan Upgrade ("***BPU***") ATRR for the next Rate Year plus any applicable BPU True-up adjustment;

(iii) with respect to any True-up Adjustment or BPU True-up Adjustment calculated pursuant to Section 3, a calculation of applicable interest on any net over or under recovery based on the interest rates specified in the Commission's regulation at 18 C.F.R § 35.19a. The interest rate to be applied to the over or under recovery amounts shall be determined using the average rate for the twenty-one (21) months preceding October of the current year. The interest payable shall then be calculated by multiplying the average interest rate (monthly) by the over or under recovery amount by 24 months, the period during which the over or under recovery exists.

(iv) a recalculation of the Zonal ATRR, NITS Rate, PTP Rates, BPU ATRR, Meter Charge, Radial Line Charge, and the Schedule 1 Rates for the next Rate Year;

(v) supporting documentation, including, but not limited to, fully functioning Excel® files (or such other native format files), required to support, demonstrate and explain information upon which the Annual Update is based;

(vi) disclosure of the following changes to the extent any has taken effect since January 1, 2009, or since the prior October 1, and affects the Formula Rate or calculation of the Annual Update or the allocation of costs or revenues to SPS's transmission customers: changes in (a) FERC's Uniform System of Accounts ("USoA"), (b) FERC Form No. 1 reporting requirements as applicable, (c) any FERC ratemaking orders applicable to the SPS

Formula Rate, (d) the accounting policies, practices or procedures of SPS, (e) the SPP and/or the Xcel OATTs as they relate to SPS, or (f) classification or reclassification of facilities from transmission to radial or from radial to transmission (inclusive of changes to the net book value of such facilities as a result of depreciation) (changes in items (a) through (f) collectively referred to as "***Material Changes***");

(vii) disclosure and documentation of the impact of any changes in the classification of "Transmission Facilities" as defined in Attachment AI of the SPP OATT that took effect since January 1, 2009, or in the most recent proceeding year, that impact the Formula Rate or Radial Line Charge(s) to any transmission customer(s).

(viii) a copy of that actuarial report(s) estimating SPS's Post-Employment Benefits Other Than Pensions expenses for the next Rate Year pursuant to Statement of Financial Accounting Standards No. 106, Employers' Accounting for Post-Employement Benefits Other than Pensions ("***PBOP***"); and

(ix) information regarding wholesale gains on SPS's sale or transfer of a transmission asset.

b. SPS shall contemporaneously post and notify its transmission customers, other parties to FERC Docket No. ER08-313 as of the date the settlement is filed with the Commission and affected state regulatory commissions (collectively, "Interested Parties") of the availability of the Annual Update on the publicly-accessible portions of the SPS page of the SPP OASIS[1] and the Transmission page of the Xcel Energy Inc. Web Site[2] (collectively, the "Web Sites"). The posting shall include both a Portable Document Format and fully functioning Excel® file (or such other native format file) of all materials contained in the Annual Update.

---

1 Currently http://www.oatioasis.com/SPS/index.html

2 http://www.xcelenergy.com/Texas/Company/Transmission/Pages/Open_Access_Transmission Tariff.aspx

c. If October 1 falls on a weekend or a holiday recognized by FERC, the Annual Update shall be posted by 5:00 p.m. CPT on the next business day.

d. Each year, no later than October 20, or the next business day if October 20 is not a business day, SPS shall convene a meeting among SPS and Interested Parties and their respective representatives ("Customer Meeting") to explain the Annual Update for the next Rate Year. This Customer Meeting shall (i) allow enough time for SPS to present details about its Annual Update; (ii) provide Interested Parties and their respective representatives the chance to seek information and clarifications from SPS about the Annual Update; and (iii) allow for participation via teleconference. Interested Parties shall be provided written notice at least fourteen (14) calendar days prior to the Customer Meeting. Written notice may be provided by email to the representative(s) of the Interested Party on record with SPS.

e. SPS shall modify the Annual Update to reflect any changes that it and the Interested Parties have agreed upon as of November 15, or the next business day if November 15 is not a business day, and on such date, provide SPS's Zonal ATRR and each Base Plan Upgrade's Revenue Requirement and description to the SPP for the purpose of SPP preparing any necessary tariff filing.[3] SPS shall also cause the revised Annual Update to be posted on the Web Sites no later than December 1. Contemporaneous with the posting of the revised Annual Update, SPS shall file the revised Annual Update with the Commission ("Annual Informational Filing"). If December 1 falls on a weekend or a holiday recognized by FERC, the Annual Informational Filing shall be posted no later than 4:00 p.m. CPT on the next business day. The Annual Informational Filing and posting will include both Portable Document Format and fully functioning Excel® file (or such other native format file) of all materials contained in the revised Annual Update. As soon as available, such posting shall also include the docket number assigned by the FERC to the Annual Informational Filing. The Annual Informational Filing shall not require Commission action.[4]

3 In the event that the SPP is no longer required to make a tariff filing to reflect SPS's Zonal ATRR in the SPP OATT, and to the extent consistent with applicable Commission precedent, the November 15 deadline may be delayed or extended, as appropriate, until such later deadline established by the SPP that will facilitate timely billing of the new Zonal ATRR in the subsequent Rate Year.

4 The transmittal letter accompanying the Annual Informational Filing shall inform the Commission that the Annual Informational Filing is not intended to be subject to the Commission's notice requirements, that it is not intended for the Commission to take action accepting the Annual Informational Filing, and shall inform the Commission regarding the procedures contained in these Implementation Procedures for review and challenge of the Annual Informational Filing. If the Commission issues a notice of or an order accepting the Annual Informational Filing, SPS or XES shall advise the Commission of the challenge process in these Implementation Procedures and shall work with the settling parties in Docket No. ER08-313-000, et al., to seek rescission of such action. No Commission action on the Annual Informational Filing shall affect any rights under the Formula Rate or these Implementation Procedures.

f. The Annual Update for the new Rate Year shall:

(i) be based upon SPS's most recent budget and other information for the new Rate Year, that reasonably projects costs properly recorded (or to be recorded) on the books and records of SPS consistent with the Commission's USoA, FERC's orders establishing generally applicable transmission ratemaking policies, FERC accounting policies and practices, SPP's policies, and the SPP and Xcel Energy OATTs; effective January 1, 2015, PBOP charges will be based on the PBOP expense amount reported in SPS's most recent annual actuarial valuation report as of the date of SPS's Annual Update; and

(ii) compute the Projected ATRR using a rate base reflecting the following:

(1) an average of 13 monthly balances shall be applied to (i) gross plant balance for all plant functions, (ii) accumulated depreciation and amortization balance for all plant functions, (iii) the gross plant balance associated with the generator step-ups, (iv) capital structure balances (that is, long-term debt, preferred stock, and common equity), and (v) Construction Work in Progress ("CWIP") balance (if/when CWIP recovery is approved by the Commission);

(2) an average of the beginning of year and end of year balances shall be applied to (i) accumulated deferred income tax balances, (ii) unamortized balance of abandoned incentive plant (if/when abandoned incentive plant recovery is approved by the Commission), (iii) unamortized balance of extraordinary property loss (if/when recovery is approved by the Commission), (iv) land held for future use plant balance, (v) materials and supplies, and (vi) prepayments;

(3) Cash Working Capital shall be calculated (the value will be set to zero until an alternative recovery mechanism is approved by the Commission);

(4) the most recent end of the year actual plant balances shall be used in the calculation of the Radial Line Charges and the Meter Charges;

(5) for each Base Plan Upgrade project, the revenue requirement credit shall be based on the projected investment amount, the projected in-service date and the projected Fixed Charge Rate ("*FCR*").

**Section 3 True-up Adjustment**

The True-up Adjustment component of the Zonal ATRR for each Rate Year, beginning with 2011, shall be determined as follows:

a. Beginning with 2010, no later than 5 p.m. CPT on June 15 of each year, SPS or XES or another representative of Xcel Energy on SPS's behalf, shall calculate and post the ATRR for the previous Rate Year based on its actual costs as reflected in its FERC Form No. 1 and its books and records for that Rate Year ("Actual ATRR"). The Actual ATRR shall be compared with the Projected ATRR for the same year ("True-up Year") to determine any excess or shortfall in the projected Zonal ATRR that was used for billing purposes in the True-up Year. In addition, actual divisor loads

shall be compared to projected divisor loads and the difference multiplied by the zonal rate actually billed to determine any excess or shortfall in collection due to volume. The sum of the excess or shortfall due to the actual versus projected Zonal ATRR and the excess or shortfall due to volume shall constitute the ("True-up Adjustment"). The True-up Adjustment shall have the following support:

(i) a data-populated version of the Formula Rate template setting forth the Actual ATRR for the True-up Year;

(ii) a determination of the difference between the Projected ATRR and the Actual ATRR for such True-up Year, as set forth in Section 3.a. herein, shall be provided in Worksheet A included in the data populated version of the Formula Rate as described in item (i);

(iii) a determination of the difference between the Projected BPU ATRR and the Actual BPU ATRR for such True-up Year shall be provided in Worksheet A that is included in the data populated version of the formula;

(iv) supporting documentation required hereunder, including, but not limited to, fully functioning Excel® files (or such other native format files), which demonstrate or explain information not otherwise set out in SPS's FERC Form No. 1;

(v) disclosure of any Material Changes on the calculation of the True-up Adjustment to the extent that such Material Changes have taken effect since January 1, 2009, or since the prior October 1, and those Material Changes affect the Formula Rate or calculation of the True-up Adjustment or the allocation of costs or revenues to SPS's transmission customers; and

(vi) an example True-up Adjustment of the 2009 net revenue requirement (using illustrative numbers) has been provided as Exhibit A attached hereto.

a. By no later than June 15, SPS shall contemporaneously post the True-up Adjustment on the Web Sites and SPS shall file a letter with the Commission ("True-up Filing") announcing the availability of the True-up Adjustment on the Web

Sites (i.e., it will not file the entirety of the True-up Adjustment). If June 15 falls on a weekend or a holiday recognized by FERC, the True-up Filing shall be filed and posted no later than 4:00 p.m. CPT on the next business day. The True-up Adjustment posting shall include both a Portable Document Format and fully functioning Excel® file (or such other native format file) of all materials contained in the True-up Adjustment. SPS shall notify the Interested Parties of the availability of the True-up Filing and posting. The True-up Filing shall not require Commission action.

b. Each year, no later than July 15, SPS shall convene a meeting among SPS and other Interested Parties and their respective representatives ("True-up Customer Meeting"). This True-up Customer Meeting shall (i) allow enough time for SPS to present details about its True-up Adjustment; (ii) provide Interested Parties and their respective representatives the chance to seek information and clarifications from SPS about the True-up Adjustment; and (iii) allow for participation via teleconference. SPS shall post and Interested Parties shall be provided written notice at least fourteen (14) calendar days prior to the True-up Customer Meeting. Written notice may be provided by email to the representative(s) of the Interested Party on record with SPS.

c. The True-up Adjustment shall:

(i) be based on costs that are prudently incurred and properly recorded on the books and records of SPS, including SPS's FERC Form No. 1 data, as applicable, for the most recently completed calendar year consistent with the USoA, FERC's orders establishing generally applicable transmission ratemaking policies, and, to the extent specified in the Formula Rate, SPS's books and records kept in conformance with the FERC USoA, FERC accounting policies and practices, SPP's policies, and the SPP and Xcel Energy OATTs;

(ii) compute the Actual ATRR using the same methodology for calculating rate base and capital structure balances as specified for the Annual Update in Section 2(f)(ii) above;

(iii) compute the Actual BPU ATRR using the actual Base Plan Upgrade project investment amount(s), the actual in-service date(s), and the actual FCR; and

(iv) include a side-by-side comparison of the actual ATRR formula rate components as compared with the projected ATRR formula rate components for the True-up Year ("Variance Analyses").

d. Summary of Formula Rate Process including True-up Adjustment:

(i) Monthly charges shall be based on the Zonal ATRR that uses projected data for each Rate Year. For example, those charges for service from January 1, 2009 through December 31, 2009 shall be based on projected 2009 plant-in-service costs. Beginning January 1, 2012, the monthly charges shall be based on the Zonal ATRR using projected data that includes projected data for the BPU ATRR.

(ii) The Zonal ATRR based on projected 2009 data shall be trued-up in June 2010 to a Zonal ATRR based on actual data. Beginning with the 2012 Rate Year, the Zonal ATRR and the BPU ATRR based on projected data shall be trued-up in June 2013 to a Zonal ATRR and BPU ATRR based on actual data.

(iii) Differences between the Zonal ATRR and the BPU ATRR calculated using projected and actual data for a given True-up Year that result from the True-up Adjustment process shall be rolled forward to the following projected Rate Year, including interest. For example, the True-up Adjustment for the 2012 Formula Rates would be calculated in June 2013 and included in the rate formula effective January 2014.

(iv) The sequence outlined in subsections (i), (ii) and (iii), above, shall repeat each subsequent Rate Year and is summarized below:

| Month | Year | Action |
|---|---|---|
| Oct. | 2009 | Annual Update - SPS populates the formula with Year 2010 projected data. Formula template amounts for 2010 actual data are left blank at this time. |
| June | 2010 | True-up Adjustment - SPS populates the Year 2009 projected data formula with Year 2009 actual data and calculates the 2009 True-up Adjustment (before interest). |
| Oct. | 2010 | Annual Update - SPS calculates the interest to include in the 2009 True-up Adjustment. |
| Oct. | 2010 | Annual Update - SPS populates the formula with Year 2011 projected data and includes the 2009 True-up Adjustment amount into the Zonal ATRR for 2011. Formula template amounts for 2011 actual data are left blank at this time. |
| June | 2011 | True-up Adjustment - SPS populates the Year 2010 projected data formula with Year 2010 actual data and calculates the 2010 True-up Adjustment (before interest). |
| Oct. | 2011 | Annual Update - SPS calculates the interest to include in the 2010 True-up Adjustment. |
| Oct. | 2011 | Annual Update - SPS populates the formula with Year 2012 projected data and inputs the 2010 True-up Adjustment amount into the Zonal ATRR for 2012. Formula template amounts for 2012 actual data are left blank at this time. |

| | | |
|---|---|---|
| June | 2012 | True-up Adjustment - SPS populates the formula with 2011 actual data and calculates the 2011 True-up Adjustment (before interest). |
| Oct. | 2012 | Annual Update - SPS calculates the interest to include in the 2011 True-up Adjustment. |
| Oct. | 2012 | Annual Update – SPS populates the formula with Year 2013 projected data including projected data for the BPU ATRR and inputs the 2011 True-up Adjustment amount into the Zonal ATRR for Year 2013. Formula template amounts for 2013 actual data are left blank at this time. |
| June | 2013 | True-up Adjustment – SPS populates the formula with 2012 actual data including the actual BPU ATRR and calculates the 2012 Zonal ATRR and BPU ATRR True-up adjustments (before interest). |
| Oct. | 2013 | Annual Update – SPS calculates the interest to include in the 2012 True-up Adjustment. |
| Oct. | 2013 | Annual Update – SPS populates the formula with Year 2014 projected data including projected data for the BPU ATRR and inputs the 2012 Zonal ATRR and the 2012 BPU ATRR True-up Adjustment amounts into the Zonal ATRR and BPU ATRR for 2014. Formula template amounts for 2014 actual data are left blank at this time. |
| June | (Year) | True-up Adjustment - SPS populates the formula with (Year - 1) actual data and calculates the (Year – 1)True-up Adjustment (before interest). |
| Oct | (Year) | Annual Update – SPS calculates the interest to include in the (Year – 1) True-up Adjustment. |
| | | Annual Update - SPS populates the formula with |

(Year +1) projected data and (Year –1) True-up Adjustment.

e. The True-up Adjustment is subject to challenge and review in accordance with the procedures set forth in this Appendix 1, and all other rights that any entity may have under the Federal Power Act ("FPA") or the Commission's regulations.

## Section 4 Annual Review Procedures

Each Annual Update and True-up Adjustment shall be subject to the following review procedures ("Annual Review Procedures"):

a. Beginning June 15, but no later than November 30 of each year, any Interested Party and any entity that has standing to challenge SPS formula rates under the FPA may serve reasonable information requests in writing on SPS concerning the True-up Adjustment and/or the Annual Update for the next calendar year ("Information Requests"). The deadline may be extended by mutual consent.

b. Information Requests submitted according to Section 4.a., above, shall be limited to what is appropriate to determine whether the Formula Rate (inclusive of any corrections) has been applied accurately, appropriately, and in accordance with its terms. Permissible Information Requests include, but are not limited to, Information Requests regarding Material Changes and Information Requests related to whether costs have been prudently incurred and whether costs have been properly recorded, on the books and records of SPS, including SPS's FERC Form No. 1, as applicable, consistent with the USoA, FERC's orders establishing generally applicable transmission ratemaking policies, FERC accounting policies and practices, SPP's policies, and the SPP and Xcel Energy OATTs. Such Information Requests

shall not solicit information concerning costs or allocations where those specific costs or allocations have been addressed by any final FERC order or by any final settlement approved by the appropriate authority, court or agency, except to determine if the costs or allocations have been accurately and appropriately implemented in accordance with the terms of the order and/or settlement or to determine if different circumstances might affect such prior actions. Interested Parties should make good faith efforts to submit consolidated sets of Information Requests that limit the number and overlap of questions to the maximum extent practicable.

c. SPS shall make a good faith effort to respond to Information Requests pertaining to the Annual Update or True-up Adjustment within fourteen (14) calendar days after receipt of such Information Requests. Information requests received after 4 p.m. CPT shall be considered received the next business day.

**Section 5** **Resolution of Issues and Challenges to Annual Update and/or True-Up Adjustments**

a. No later than December 5 of each year, any Interested Party may notify SPS in writing of any specific challenge(s) to any component of the most recently posted True-up Adjustment and/or Annual Update ("Preliminary Challenge"). Within five (5) business days of receiving notice of such challenge(s), SPS shall provide written notice to all Interested Parties of such challenge(s) and post notice of such challenge(s) on the Web Sites. SPS and the Interested Party shall make good faith efforts to resolve the Preliminary Challenge through negotiations, and shall allow any Interested Party to participate in such negotiations. Any modification to the True-up Adjustment or the Annual Update that results from such negotiations and that is agreed upon no later than November 15 shall be incorporated into the Annual Update and True-up Adjustment for the next Rate Year and incorporated into the Company's Annual Informational Filing. However, to the extent such negotiations lead to agreed-upon changes to the Formula Rate, such changes shall be filed with the Commission and such changes to the Formula Rate shall have an effective date of January 1 of the Rate Year under review subject to Commission approval.

b. SPS shall provide and post a written response within fourteen (14) calendar days of receiving a Preliminary Challenge. Its written response shall notify all Interested Parties of the extent to which SPS agrees or disagrees with the position raised by the Interested Party(ies), and what, if any, modifications to the Annual Update or True-up Adjustment will result. If SPS disagrees with the issue(s) raised in the Preliminary Challenge, it shall provide supporting documentation with its response.

c. All information and correspondence produced pursuant to these Implementation Procedures may be included in any Formal Challenge, in any other proceeding concerning the Formula Rate initiated at FERC pursuant to the FPA, or in any proceeding before the U.S. Court of Appeals to review a FERC decision related to the Formula Rate. SPS may, however, designate any response to an Information Request as confidential if the information conveyed is not publicly available. Interested Parties' representatives shall treat such response as non-public information provided in confidence. Interested Parties may use responses designated as confidential in connection with any informal dispute resolution process commenced pursuant to Section 5.a. herein, any Formal Challenge brought pursuant to Section 5.e. herein, or in conjunction with a protest to a proposed change to the formula rate initiated by SPS through a separate FPA Section 205 filing; provided, however, when so used, such response shall initially be filed under seal (unless the claim of confidentiality is waived by SPS), subject to a later determination by the presiding authority that the material is, in whole or in part, not entitled to confidential treatment.

d. If SPS and the Interested Parties have not resolved all identified issues within thirty (30) calendar days after receipt of SPS's response to the issue(s), senior management representatives of SPS and the Interested Parties shall meet to try to resolve the issue(s).

e. If these senior management representatives are not able to resolve the issue(s) within sixty (60) calendar days, any Interested Party that has not resolved any Preliminary Challenge to a True-up Adjustment may file with FERC a Formal Challenge to a True-up Adjustment pursuant to these Implementation Procedures ("Formal Challenge").

(i) Failure to notify SPS of an issue shall not bar pursuit of such issue in the filing of a Formal Challenge.

(ii) Failure to notify SPS of an issue shall not bar pursuit of such issue in a subsequent Annual Update or True-up Adjustment review.

(ii) Failure to file a Formal Challenge regarding an issue(s) as to a given Annual Update or True-up Adjustment shall not bar pursuit of such issue(s) or the filing of a Formal Challenge as to such issue(s) as relates to a subsequent Annual Update or True-up Adjustment review.

f. In any proceeding ordered by the FERC in response to a Formal Challenge raised under these Implementation Procedures, SPS shall bear the burden of demonstrating the justness and reasonableness of the charges resulting from its application of the Formula Rate, and of proving that it properly applied the Formula Rate, properly calculated the challenged Annual Update or True-up Adjustment pursuant to the Formula Rate, and that adoption of any Material Change is just and reasonable. Nothing herein is intended to alter the burden applied by FERC with respect to prudence challenges.

g. Any changes to the data inputs resulting from Preliminary Challenges or Formal Challenges that are not agreed to or resolved by a final Commission Order on or before November 15 shall be incorporated into the Formula Rate and True-up Adjustment for the next Rate Year that begins after the negotiations have become final.

h. It is recognized that resolution of Preliminary Challenges and/or Formal Challenges related to Material Changes may necessitate pro forma adjustments to the Formula Rate calculations, changes to the Formula Rate, or changes to the input data to restore the intent of the formula as of the effective date of the settlement or as the Formula Rate may be

subsequently modified by FERC or through settlement, and to ensure that the Formula Rate continues to operate in a manner that is just, reasonable, and not unduly discriminatory or preferential. It is further recognized that the impact of any such pro forma adjustment or changes to the Formula Rate calculation, the Formula Rate, or input data, may be applicable to the entire Rate Year at issue in a Preliminary Challenge or Formal Challenge. If such pro forma adjustment occurs mid-year, it shall be effective mid-year, however, the charges produced by the Formula Rate shall not be adjusted mid-year but rather the impact on the charges from the pro forma adjustment shall be reflected in the True-up Adjustment. If such a change in the Formula Rate is agreed to by the settling parties in Docket No. ER08-313-000 et al. or required by FERC, SPS shall file such Formula Rate change under FPA Section 205, with requests for waiver of applicable notice requirements, to permit the change to become effective for the Annual Update or True-up Adjustment for the Rate Year under review, which requests for waiver of the applicable notice requirements shall not be opposed by any settling party in Docket No. ER08-313-000, et al.

i. Except as provided in Section 5.h, no party shall, in conjunction with the Annual Update or True-up Adjustment, seek to modify the Formula Rate (i.e., all modifications to the Formula Rate shall require an FPA filing).

**Section 6** **Challenges to the Formula**

a. Nothing in these Annual Formula Rate Implementation Procedures shall be deemed to limit in any way the right of any party to file a request for prospective relief under FPA Sections 205, 206 or 306 and FERC's regulations to change the Formula Rate. Any party may challenge the continuing reasonableness of the Formula Rate or the charges produced thereby.

b. Neither failure to notify SPS of an issue nor failure to file a Formal Challenge nor failure to exercise any rights under FPA Sections 205, 206, and 306 and FERC's regulations in any given year shall be construed as a bar to raising any issue in any proceeding initiated at FERC.

**Section 7** **Corrections to FERC Form No. 1, Annual Update, or True-up Adjustment**

a. Notwithstanding any other provision of these Implementation Procedures, (i) if SPS identifies, determines or concludes that corrections to any prior year's FERC Form No. 1 or Annual Update or True-up Adjustment pursuant to the Formula Rate are required to correct an error, or (ii) at any time an Interested Party presents information or raises a concern to SPS that indicates that an error exists or a correction is required to any prior year's FERC Form No. 1 or Annual Update or True-up Adjustment, SPS shall investigate the alleged error(s) and within 30 days shall inform Interested Parties of the results of the investigation by posting such results on its Web Sites as set forth in Section 2.b. The results of the investigation shall include an explanation of the nature of the alleged error(s) and the extent to which SPS agrees or disagrees that such error(s) require corrections to the FERC Form No. 1, Annual Update or True-up Adjustment.

b. If a correction to an Annual Update or True-up Adjustment results from the error, no mid-year adjustment will result, but an adjustment will be made in a future period as follows.

SPS shall promptly correct such error(s) identified in Section 7.a., and shall notify Interested Parties of such correction(s) by posting an appropriate amended Annual Update or True-up Adjustment on the Web Sites as set forth in Section 2.b. If a correction to the Annual Update or True-up Adjustment is identified before November 15 (i.e., before the commencement of the next Rate Year), the modified charges produced by the Formula Rate shall be reflected in the next Rate Year. Otherwise, the correction shall be reflected in the next True-up Adjustment, and credited in the following Rate Year.

c. In any Rate Year in which an out-of-period correction is reflected, SPS shall also include worksheets to describe such adjustments, including interest on the total correction for the entire period in which the error existed through and

including the Rate Year in which the correction is reflected in the Annual Update. The applicable interest rate shall be the FERC-published interest rates.

d. In the event SPS corrects or fails to correct an Annual Update or True-up Adjustment pursuant to this Section 7, Interested Parties shall have the same rights to review and submit challenges to the correction(s) or SPS's failure to make a correction as those parties otherwise would have had pursuant to these Annual Formula Rate Implementation Procedures, without abridgement or restriction, if the Form No. 1, Annual Update, or True-up Adjustment had been correctly stated in the first instance; provided, however, the scope of review of the Section 7 correction, the formula line item reflecting the Section 7 correction, and the worksheets calculating the Section 7 correction is limited to the aspects of the Formula Rate, Annual Update and/or True-up Adjustment affected by the out-of-period correction(s).

**Section 8** **Changes to Formula Rate Initiated by SPS**

a. Any changes to the Formula Rate initiated by SPS, including any changes necessitated by Material Changes, may only be implemented as a result of a filing with FERC under Section 205 or 206 of the FPA.

b. However, in the event that FERC mandates any changes in the format for the FERC Form No. 1 or the USoA, SPS may make a filing with FERC under FPA Section 205 that updates the FERC Form No. 1 and USoA references in its Formula Rate to reflect any such changes prior to or coincident with the Annual Update or True-up Adjustment where these changes are reflected in the Formula Rate. Such filing may not be used to raise issues unrelated to the proposed changes. If such a change in the Formula Rate is required pursuant to this Section 8.b., the FPA Section 205 filing may include a request for waiver of applicable notice requirements, to permit the change to become effective for the Annual Update or True-up Adjustment for the applicable Rate Year, which requests for waiver of notice requirements shall not be opposed by any settling party in Docket No. ER08-313-000, et al.

## Section 9 Changes to the Stated Inputs in the Formula Rate

a. The following Formula Rate inputs shall be stated values to be used in the Formula Rate (both for the Annual Update and True-up Adjustment) until changed by a filing pursuant to Section 205 of the FPA or by a proceeding under Section 206 of the FPA: (a) the rate of return on common equity ("*ROE*"); and (b) depreciation rates or amortization periods. With respect to the PBOP charges, the amount shall be based on an Actuarial Study and is net of any amounts received from the Federal government for the prescription drug subsidy ("Medicare D Subsidy"). The amount SPS will contribute to its external PBOP trust will be at a minimum equal to its actual PBOP expense.

Effective on and after October 20, 2014: with respect to a filing under FPA Section 205 to change the transmission formula ROE established in the comprehensive Settlement Agreement in Docket No. EL05-19-000 et al. ("*Settlement Agreement*"), SPS will not submit a filing prior to October 31, 2019 seeking to increase the fixed settlement ROE of 10.5 percent (which includes the SPP RTO membership adder), and will not request an effective date earlier than January 1, 2020; with respect to a filing under FPA Section 206 to the change the fixed settlement ROE of 10.5 percent, no Settling Party to the Settlement Agreement will file or support an FPA Section 206 filing to reduce the fixed settlement ROE prior to October 31, 2019, and no Settling Party will request a refund effective date earlier than January 1, 2020 ("*Limited ROE Moratorium*").

b. For extraordinary property losses, the unamortized balance shall be included in rate base and shall be amortized for Formula Rate purposes only after FERC has authorized the amount of the loss and the amortization of the loss for ratemaking purposes.

c. For abandoned plant, the unamortized balance shall be included in rate base and shall be amortized for Formula Rate purposes only after FERC has authorized the amount of any abandoned plant and the amortization of the balance for ratemaking purposes.

EXHIBIT A

**EXAMPLE OF 2009 TRUE-UP ADJUSTMENT:**

Projected 2009 net ATRR was $90,000,000, projected load was 4,500,000 kw and the resulting zonal rate was $20.00 per kw-yr.

Actual 2009 net ATRR calculated based on FERC Form No. 1 data available in May, 2010 is $88,000,000, actual 12 CP load is 4,512,820 kw for a resulting zonal rate of $19.50 per kw-yr.

**2009 TRUE-UP ADJUSTMENT CALCULATION:**

There is an over recovery of the net revenue requirement equal to $2,000,000 ($90,000,000 – $88,000,000 = $2,000,000).

There is also a $256,400 over recovery in revenue collection due to volume ((4,500,000kw – 4,512,820kw) X $20 per kw-yr = $256,400).

In this example, the total True-up Adjustment amount would be a net over recovery of $2,256,400 ($2,000,000 + $256,400 = $2,256,400), which would be applied as a reduction to the 2011 projected net ATRR beginning in January 2011.

This same amount can also be calculated by taking the difference between the 2009 projected zonal rate and the zonal rate calculated based on actual data times the actual load (($20.00 – $19.50) per kw-yr X 4,512,820 kw = $2,256,400). (Allow for rounding.)

**EXAMPLE OF 2012 TRUE-UP ADJUSTMENT:**

Projected 2012 Zonal ATRR = $118M  Actual 2012 Zonal ATRR = $120M
Projected 2012 BPU ATRR = $10M  Actual 2012 BPU ATRR = $9M
Projected Load = 5,400,000 kW  Actual Load = 5,200,000 kW
Projected Zonal Rate = $20.00 per kW-yr. (($118M - $10M) / 5,400,000 kW)
Actual Zonal Rate = $21.35 per kW-yr. (($120M - $9M) / 5,200,000 kW)

**2012 TRUE-UP ADJUSTMENT CALCULATION:**
Zonal ATRR under recovery of $2M. ($120M - $118M)

Zonal ATRR under recovery of $1M from the BPU ARR. ($9M - $10M. The projected BPU ATRR revenue credit reducing the Zonal ATRR was $1M higher than the actual BPU ATRR.)

Zonal ATRR under recovery of $4M due to the volume variance, projected load as compared to actual load. ((5,200,000 kW – 5,400,000 kw) x $20.00 per kW = $4M.)

In this example, the total Zonal ATRR True-up would be a net under recovery of $7M. [5] ($2M + $1M + $4M)

[5] The BPU ATRR amount is revenue credited to the Zonal ATRR. Because the projected BPU ARR was $1M higher than the actual BPU ATRR, the projected Zonal ATRR was $1M lower than it should have been. In the next annual update, the projected BPU revenue credit will be reduced by $1M from the BPU ATRR true-up. This results in a smaller BPU revenue credit and a larger projected Zonal ATRR.

This same amount can also be calculated by taking the difference between the 2012 actual zonal rate and the projected zonal rate times the actual load. (($21.35 per kW - $20.00 per kW) x 5,200,000 kW = $7M.) (Allow for rounding.)

Formula Rate - Cash Flow

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)
References to data are to FERC account numbers

| Note Letter | | | | | |
|---|---|---|---|---|---|
| New | | | | | |
| A | The revenues credited on page 1 line 2 include a) amounts received directly from the SPP for Point-to-Point transmission service where the demand is not included in the divisor; b) amounts from customers taking service under grandfathered agreements where the demand is not included in the rate divisor; and c) imputed revenues related to short-term reservations of LES's merchant function. Revenue associated with Federal Regulatory Commission annual charges, gross receipts taxes, ancillary services and facilities excluded from the Transmission Cost of Service are not incuded as revenue credits. Revenue from transmission customers whose coincident peak loads are included in the divisor of the load-ratio share calculation are not included as revenue credits. See Worksheet A for details. | | | | |
| B | Includes income related only to transmission facilities, such as pole attachments, rentals and special use. See Worksheet B for details. | | | | |
| C | Calculation of Prior Year Divisor True-Up | | | | |
| | Historic Year Actual Divisor | Pg C, line 1 | - | | kW |
| | Projected Year Divisor | Pg C, line 2 | - | | kW |
| | Difference between Historic & Projected Year Divisors | | - | | kW |
| | Prior Year Projected Annual Cost ($ per kw per year) | | | $0.00 | |
| | Projected Year Divisor True-Up (Line 3 x Line 4) | | | $0.00 | |
| D | The FERC's annual charges for the year assessed the Transmission Owner for service under this tariff, if any. | | | | |
| F | System control and load dispatch costs. | | | | |
| G1 | The utility's maximum monthly megawatt load (60-minute integration) for RQ service at time of ISO coincident monthly peaks. RQ service is service that the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). | | | | |

| | |
|---|---|
| G2 | Includes LF, IF, LU, IU service. LF means "firm service" (cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions), and long-term (duration of at least five years); does not meet definition of RQ service. IF is "firm service" for a term longer than one but less than five years. LU is service from a designated generating unit, of a term no less than five years. LI is service from a designated generating unit for a term between one and five years. Measured at time of ISO coincident monthly peaks. |
| G3 | LF as defined above at time of ISO coincident monthly peaks. |
| G4 | LF as defined above at time of ISO coincident monthly peaks. |
| G5 | Grandfathered agreements whose rates have been changed to eliminate or mitigate pancaking - the revenues are included in line 4 page 1 and the loads are included in line 13, page 1. Grandfathered agreements whose rates have not been changed to eliminate or mitigate pancaking - the revenues are not included in line 4, page 1 nor are the loads included in line 13, page 1. |
| I | Line 5 - EPRI Annual Membership Dues, all Regulatory Commission Expenses, and non-safety related advertising. Line 5a - Regulatory Commission Expenses directly related to transmission service, ISO filings, or transmission siting. |
| K | The FERC, in Order Nos. 679 and 679-A, offers a 50-basis point incentive adder for transmission owners joining an RTO as long as the return on equity for the transmission owner is within a zone of reasonableness. In order to be comparable with transmission owners in RTOs (including SPP), LES has included this 50-basis-point incentive adder in its revenue requirements. |
| L | Removes transmission plant determined by Commission order to be state-jurisdictional according to the seven-factor test (until RUS 12 balances are adjusted to reflect application of seven-factor test). |
| M | The Margin Requirement is the margin the utility uses in calculating rates applicable to its native load sales. The Margin Requirement as a percent of interest expense yields a TIER (times interest earned ratio), and the Margin Requirement as a percent of debt service is the DSR (debt service ratio), either of which may be referred to as a Margin Ratio (MR). Some utilities have MRs required by bond covenants and/or MRs that include expenses additional to interest or debt service (for example, an MR equal to a percentage of the sum of DS+O&M). The ISO will review such party's filings to assure that the MRs are consistent with those applicable to native load or required by bond covenants and utility must provide workpapers showing derivation of margin. |
| N | Removes dollar amount of transmission expenses included in the OATT ancillary services rates, including all of Account No. 561. |

| | |
|---|---|
| O | Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed to included in OATT ancillary services. For these purposes, generation step-up facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down. |
| P | If the utility has more employees assigned to A&G than to the sum of production, transmission, and distribution, set the W&S allocator at page 3, line 37 equal to the gross plant allocator (GP) at page 3, line 7. |
| Q | Enter dollar amounts. |
| R | Line 45 must equal zero since all short-term power sales must be unbundled and the transmission component reflected in Account No. 456 and all other uses are to be included in the divisor. |
| U | Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere. |
| V | Additional revenue requirement for facilities receiving incentives. See worksheets I, J, and K |
| W | FERC 565 on page 2 includes STEP BPF, STEP HWBW, CWIP, Balanced Portfolio Projects, Balanced Portfolio Transfers, and Priority Projects associated with the Southwest Power Pool. These costs are excluded from the ATRR because they are not funded by transmission rates. |

Formula Rate Implementation Protocols

## I. Annual True-Up and Annual Projection

1. The Formula Rate Template set forth in Attachment H, Addendum 6, of Southwest Power Pool's ("SPP") Open Access Transmission Tariff ("OATT") and these Formula Rate Implementation Protocols comprise the filed rate by SPP for calculating Lincoln Electric System's ("LES") Zonal Annual Transmission Revenue Requirement ("ATRR") for Transmission Service under the SPP OATT. LES shall follow the instructions specified in the Formula Rate Template to calculate annually its ATRR and the rates for its Network Integration Transmission Service and Point-to-Point transmission service, and the ATRR for Base Plan Upgrades and other network upgrades. These protocols shall apply to LES's calculation of its ATRR, including the calculation of the Annual True-Up ("Annual True-Up") and the projected net revenue requirement ("Annual Projection").

2. The Formula Rate shall be calculated annually with resulting rates applicable to service on and after January 1st through December 31st of each calendar year ("Rate Year"), subject to review, challenge and refunds or surcharges with interest, to the extent provided herein.

3. On or before June 1st, LES shall provide its Annual True-Up to SPP and cause such information to be posted on SPP's website and OASIS. Within ten (10) days of such posting, LES shall request SPP to cause notice on the SPP exploder list titled "Formula Rate Posting Information Notification" or similar exploder list. Interested Parties may contact SPP to subscribe to the SPP exploder list. For purposes of these protocols, the term Interested Party includes, but is not limited to, customers under the SPP OATT, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general.

4. On or before October 15th, LES shall provide its Annual Projection to SPP and cause such information to be posted on SPP's website and OASIS. Within ten (10) days of such posting, LES shall request SPP to cause notice on the exploder list titled "Formula Rate Posting Information Notification" or similar exploder list. Interested Parties can contact SPP to subscribe to the SPP exploder list.

5. LES shall submit to the Federal Energy Regulatory Commission ("FERC" or the "Commission") an Informational Filing as provided in Section V of these protocols.

6. If the date for posting the Annual True-Up or Annual Projection falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day. The date on which such posting occurs shall be that year's "Publication Date." Any delay in the Publication Date or in the posting of the Annual True-Up or Annual Projection will result in an equivalent extension of time for the submission of Information Requests discussed in Section II of the protocols.

7. A change to the Formula inputs related to revised depreciation rates or the fixed margin requirement may not be made absent an appropriate filing with FERC.

8. The Annual True-Up shall

   (i) Be based on actual data for the prior calendar year, and, to the extent specified in the Formula, upon the audited books and records of LES;

   (ii) Identify all material adjustments made to the data in determining formula inputs.

9. The Annual True-Up and Annual Projection shall:

   (i) Include a workable data-populated Formula Rate Template in native format with all formulas and links intact;

   (ii) Provide the Formula Rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used;

   (iii) Provide sufficient information to enable Interested Parties to replicate the calculation;

   (iv) Identify any changes in the formula references;

   (v) With respect to any change in accounting that affects inputs to the Formula Rate or the resulting charges billed under the Formula Rate ("Accounting Change"):

      (1) Identify any Accounting Changes, including:

         - The initial implementation of an accounting standard or policy;
         - The initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction; and
         - Correction of errors and prior period adjustments that impact the calculation.

      (2) The implementation of new estimation methods or policies that change prior estimates. Identify items included in the calculation at an amount other than on a historical cost basis (e.g., fair value adjustments); identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs.

      (3) Provide, for each item identified pursuant to items I.9.v.1 - I.9.v.2 of these protocols, a narrative explanation of the individual impact of such changes on the calculation.

10. LES shall hold an open meeting among Interested Parties ("Annual True-Up Meeting") after the Annual True-Up Publication Date but no sooner than seven (7)

days from the Publication Date and no later than July 15th. No less than twenty (20) days prior to such Annual True-Up Meeting, LES shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual True-Up Meeting and LES shall request SPP to provide notice of such meeting to the SPP email exploder list titled "Formula Rate Posting Information Notification" or similar exploder list.

11. The Annual True-Up Meeting will be hosted by LES in the forum of its choice which may include video conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. LES shall provide remote access for Interested Parties to participate in the meeting. The Annual True-Up Meeting shall (i) permit LES to explain and clarify its Annual True-Up; and (ii) provide Interested Parties an opportunity to seek information and clarifications from LES about the Annual True-Up.

12. LES shall hold an open meeting among Interested Parties ("Annual Projected Rate Meeting") after the Annual Projection Publication Date but no sooner than seven (7) days from the Publication Date and no later than November 30th. No less than twenty (20) days prior to such Annual Projected Rate Meeting, LES shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual Projected Rate Meeting and LES shall request SPP to provide notice of such meeting to the SPP email exploder list titled, "Formula Rate Posting Information Notification" or similar exploder list.

13. The Annual Projected Rate Meeting will be hosted by LES in the forum of its choice which may include video conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. LES shall provide remote access for Interested Parties to participate in the meeting. The Annual Projected Rate Meeting shall (i) permit LES to explain and clarify its Annual Projection and (ii) provide Interested Parties an opportunity to seek information and clarifications from LES about the Annual Projection.

14. Each year LES shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members, and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

## II. Information Exchange Procedures

Each Annual True-Up and Annual Projection shall be subject to the following information exchange procedures ("Information Exchange Procedures"):

1. Interested Parties shall have seventy-five (75) days following the Annual True-Up Meeting to serve reasonable information and document requests related to the Annual

True-Up; and sixty (60) days following the Annual Projection Publication Date to serve reasonable information and document requests on LES related to the Annual True-Up and Annual Projection ("Information Exchange Period"). If either of these dates falls on a weekend or a holiday recognized by FERC, the deadline for submitting all information and document requests shall be extended to the next business day. Such information and document requests shall be limited to what is necessary to determine:

(i) that LES has properly calculated its rate pursuant to the Formula Rate and the procedures in the Protocols;

(ii) that input data under the Formula Rate are properly recorded in any underlying workpapers;

(iii) the accuracy of data and the consistency with the Formula Rate of the actual Net Revenue Requirement (including any True-Up Adjustment) under review;

(iv) the extent of accounting changes that affect Formula Rate inputs;

(v) the prudence of actual costs and expenditures; and

(vi) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

The information and document requests shall not otherwise be directed to ascertaining whether the Formula Rate is just and reasonable.

2. LES shall make a good faith effort to respond to information and document requests within fifteen (15) business days of receipt of such requests. Information requests received after 4 p.m. Central Prevailing Time shall be considered received the next business day.

3. LES will cause to be posted on SPP's website and OASIS all information requests from Interested Parties and LES's response(s) to such requests; except, however, if responses to information and document requests include material deemed by LES to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by LES and the requesting party.

4. LES shall not claim that responses to information and document requests provided pursuant to these protocols are subject to any settlement privilege, in any subsequent FERC proceeding addressing the results of the LES's Annual True-Up's or Annual Projection's incorporation into the SPP Tariff.

## III. Challenge Procedures

1. Interested Parties shall have until January 31st following the Publication Date to review the inputs, supporting explanations, allocations and calculations and to notify

LES in writing, which may be made electronically, of any specific Informal Challenges to the Annual True-Up or Annual Projection. The period of time from the Publication Date until January 31st shall be referred to as the Review Period. If January 31st falls on a weekend or a holiday recognized by FERC, the deadline for submitting all Informal Challenges shall be extended to the next business day. Failure to pursue an issue through an Informal Challenge shall not bar pursuit of that issue as part of a Formal Challenge with respect to the same Annual True-Up or Annual Projection as long as the Interested Party has included at least one issue as part of an Informal Challenge with respect to that Annual True-Up or Annual Projection. If the Interested Party has not included any issues as part of an Informal Challenge for an Annual True-Up or Annual Projection, the Interested Party is barred from pursuing a Formal Challenge with respect to any issue for that Annual True-Up or Annual Projection but is not barred from pursuing an issue or from lodging a Formal Challenge as to such issue as it relates to a subsequent Annual True-Up or Annual Projection.

2. A party submitting an Informal Challenge to LES must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. LES shall make a good faith effort to respond to any Informal Challenge within twenty (20) business days of notification of such challenge. If LES disagrees with such challenge, LES will provide the Interested Party(ies) with an explanation supporting the inputs, supporting explanations, allocations, calculations, or other information. No Informal Challenge may be submitted after January 31st, and LES must respond to all Informal Challenges by no later than February 28th.

3. Informal Challenges shall be subject to the resolution procedures and limitations in this Section III.

4. Informal Challenges shall be limited to all issues that may be necessary to determine: (1) that LES has properly calculated its rate pursuant to the Formula Rate and the procedures in the Protocols; (2) that input data under the Formula Rate are properly recorded in any underlying workpapers; (3) the accuracy of data and the consistency with the Formula Rate of the actual Net Revenue Requirement (including any True-Up Adjustment) under review; (4) the extent of accounting changes that affect Formula Rate inputs; (5) the prudence of actual costs and expenditures; and (6) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

5. LES will cause to be posted on SPP's website and OASIS all Informal Challenges from Interested Parties and LES's response(s) to such Informal Challenges; except, however, if Informal Challenges or responses to Informal Challenges include material deemed by LES to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by LES and the requesting party.

6. Any changes or adjustments to the Annual True-Up or Annual Projection resulting from the Information Exchange and Informal Challenge processes that are agreed to by LES will be reported in the Informational Filing required pursuant to Section V of these protocols. Any such changes or adjustments agreed to by LES on or before November 30th will be reflected in the Annual Projection for the upcoming Rate Year. Any changes or adjustments agreed to by LES after November 30th will be reflected in the following year's Annual True-Up, as discussed in Section IV of these protocols.

7. An Interested Party shall have until March 31st (unless such date is extended with the written consent of LES to continue efforts to resolve the Informal Challenge) to make a Formal Challenge to the Annual True-up or Annual Projection posted in the previous calendar year.

8. Formal Challenges shall be filed against SPP pursuant to these protocols and shall satisfy all of the following requirements.

   (i) A Formal Challenge shall:

      (1) Clearly identify the action or inaction which is alleged to violate the filed rate formula or protocols;

      (2) Explain how the action or inaction violates the filed rate formula or protocols;

      (3) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

         - proper calculation of the Annual True-up or Annual Projection pursuant to the Formula Rate and protocols;
         - whether the Formula Rate fails to include data properly recorded in accordance with these protocols;
         - whether there is an inaccuracy of data or inconsistency with the Formula Rate of the actual Net Revenue Requirement (including any True-Up Adjustment) under review;
         - the extent of accounting changes that affect Formula Rate inputs;
         - the prudence of actual costs and expenditures; and
         - any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

(4) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(5) State whether the issues presented are pending in an existing Commission proceeding or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(6) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(7) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(8) State whether the filing party utilized the Informal Challenge procedures described in these protocols with regard to any issue.

(ii) Service. Any person filing a Formal Challenge must serve a copy of the Formal Challenge on LES. Service to LES must be simultaneous with filing at the Commission. Simultaneous service can be accomplished by electronic mail in accordance with § 385.2010(f)(3), facsimile, express delivery, or messenger. The party filing the Formal Challenge shall serve the individual listed as the contact person on LES's Informational Filing required under Section V of these protocols.

9. A Formal Challenge shall be filed in the same docket as LES's Informational Filing discussed in Section V of these protocols. LES shall respond to the Formal Challenge by the deadline established by FERC. A party may not pursue a Formal Challenge if that party did not submit any Informal Challenge during the applicable Review Period.

10. In any proceeding initiated by FERC concerning the Annual True-Up or Annual Projection or in response to a Formal Challenge, LES shall bear the burden of proving that it has correctly applied the terms of the Formula Rate consistent with these protocols, and that it followed the applicable requirements and procedures in these protocols. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

11. The implementation of any changes or adjustments resulting from any Formal Challenge made with FERC shall be subject to SPP Tariff Section 39.1.

12. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of LES to request SPP to file unilaterally, pursuant to section 205 of the Federal Power Act and the regulations thereunder, to change the Formula Rate or any of its inputs, or to replace the Formula Rate with a stated rate, or the right of any other

party to request such changes pursuant to section 206 of the Federal Power Act and the regulations thereunder.

13. No party shall seek to modify the Formula Rate under the Challenge Procedures set forth in these protocols and the Annual True-Up and Annual Projection shall not be subject to challenge by anyone for the purpose of modifying the Formula Rate. Any modifications to the Formula Rate will require, as applicable, a Federal Power Act section 205 or section 206 filing before FERC.

## IV. Changes to Annual True-Up or Annual Projection

1. Except as provided in Section III.6 of these protocols, any changes to the data inputs, or as the result of any FERC proceeding to consider the Annual True-Up or Annual Projection, or as a result of the procedures set forth herein, shall be incorporated into the Formula Rate and the charges produced by the Formula Rate in the Annual Projection for the next Rate Year. This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments. Interest on any refund or surcharge shall be calculated in accordance with the procedures outlined in Section VI of these protocols.

2. In the event that LES identifies an error in the Annual True-Up, or is required by applicable law to correct an error, LES shall correct such error in good faith and without regard to whether the correction increases or decreases LES's revenue requirements. Nothing in these protocols should or may be construed as preventing Interested Parties or FERC from protesting such correction as inappropriate.

## V. Informational Filings

1. By March 15$^{th}$ of each year, LES shall submit to FERC an informational filing ("Informational Filing") of its Annual Projection for the Rate Year, including its Annual True-Up. The Informational Filing will be for administrative and informational purposes only, and will not submit LES to the jurisdiction of the Commission under the Federal Power Act. This Informational Filing must include the information that is reasonably necessary to determine: (1) that input data under the Formula Rate are properly recorded in any underlying workpapers; (2) that LES has properly applied the Formula Rate and these procedures; (3) the accuracy of data and the consistency with the Formula Rate of the ATRR and rates under review; and (4) the extent of accounting changes that affect Formula Rate inputs. The Informational Filing must also describe any corrections or adjustments made during the Review Period, and must describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. LES shall request SPP to provide notice of the Informational Filing via an email exploder list and by posting the docket number assigned to LES's Informational Filing on SPP's website and OASIS.

2. Any challenges to the implementation of the Attachment H-LES Formula Rate must be made through the Challenge Procedures described in Section III of these protocols, and not in response to the Informational Filing.

## VI. Calculation of True-Up Adjustment for the Annual True-Up

The True-Up Adjustment for the Annual True-Up will be determined in the following manner:

1. The Projected Revenue Requirement for the previous year, not including any prior year True-Up Adjustment, shall be compared to the Actual Revenue Requirement calculated in accordance with LES's Formula Rate for the previous year using data for that same year, and, to the extent specified in the Formula, upon the audited books and records of LES, to determine any over or under recovery plus interest ("True-Up Adjustment"). The True-Up Adjustment and related calculations shall be posted as part of LES's Annual True-Up to SPP's website and OASIS no later than June 1st (or if that day falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day).

    (i) Interest on any over recovery of the net revenue requirement or any over recovery due to volume changes shall be determined based on the Commission's regulation at 18 C.F.R. § 35.19a. Interest on any under recovery of the net revenue requirement or any under recovery due to volume changes shall be calculated on the basis of LES's actual short-term debt costs capped at the applicable FERC refund interest rate as provided in 18 C.F.R. § 35.19a. In either case, the interest payable shall be calculated using an average interest rate for the twenty-four (24) months during which the over or under recovery in the revenue requirement or volume changes exists. The interest rate to be applied to the over or under recovery amounts will be determined using the average rate for the nineteen (19) months preceding August of the current year. The interest amount will be included in the projected costs made available October 15.

2. The Net ATRR for transmission services for the following year shall be the sum of the projected revenue requirement for the following year minus Total Transmission Revenue Credits, plus or minus the True-up Adjustment from the previous year, if any, including interest.

**Formula Rate Template**
**For the 12 months ended 12/31/2XXX**

**Nebraska Public Power District**

| Note Letter | |
|---|---|
| A | The revenue credits shall include a) amounts received directly from SPP for PTP transmission services, b) direct assignment charges for transmission facilities, the cost of which has been included in revenue requirements, and c) amounts from customers taking service under grandfathered agreements, where the demand is not included in the rate divisor. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or facilities excluded from revenue requirements are not included as revenue credits. Revenues from Transmission Customers whose coincident peak loads are included in the rate divisor are not included as revenue credits. |
| B | Network transmission for firm wholesale and retail service sinking on NPPD's transmission system, plus long-term point-to-point capacity reservations that are not under the SPP OATT. |
| C | Meter reading charge not calculated but to be included in the service agreement for network and point-to-point transactions where applicable. |
| D | Line 6 - Includes payments made to EPRI that constitute annual membership dues (Account 930.2), all Regulatory Commission Expenses (Account 928), and amounts posted to an A & G account for non-safety related advertising (Account 930.1). Line 7 - Regulatory Commission Expenses (Account 928) directly related to transmission service, RTO filings, or transmission siting. |
| E | Labor related taxes (e.g. FICA, unemployment taxes) are included, along with base salary, in appropriate FERC O&M or A&G account when charged. Applicable highway and vehicle related taxes are also included in the appropriate FERC O&M or A&G account when charged. Plant related taxes such as property, gross receipts, and other assessments are charged directly in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Formula Rate Template, since they are recovered elsewhere. |
| F | Construction from Revenue replaces the Margin Requirement and is the margin the utility uses in calculating rates applicable to its native load sales. |
| G | Removes dollar amount of transmission plant related to stepdown transformation facilities that are excluded from transmission facilities under the SPP OATT. |
| H | Includes income related only to transmission facilities, such as pole attachments, rentals and special use. |

## Nebraska Public Power District
## Worksheet B - Administrative & General (A&G) Expenses

| (A) Line No. | (B) Account No. | (C) Description | (D) Total | (E) Transmission | (F) All Other |
|---|---|---|---|---|---|
| 1 | 920 | A&G Salaries | $ - | $ - | $ - |
| 2 | 921 | Office Supplies & Exp | - | - | - |
| 3 | 922 | A&G Expense Transferred | - | - | - |
| 4 | 923 | Outside Services Employed | - | - | - |
| 5 | 924 | Property Insurance | - | - | - |
| 6 | 925 | Injuries & Damages | - | - | - |
| 7 | 926 | Employee Pension/Benefits | - | - | - |

| | | | | | |
|---|---|---|---|---|---|
| 8 | 930 | Misc General | - | - | - |
| 9 | 931 | Rents | - | - | - |
| 10 | 935 | Maintenance of General Plant | - | - | - |
| 11 | | Total | $ - | $ - | $ - |

NOTE: Administrative & General (A & G) expenses are derived and dependent upon the specific department or functional area incurring the cost (e.g. Finance & Accounting, Human Resources, etc.). Costs incurred by each of these A & G departments are posted to "cost collectors". Costs are broken down into the FERC accounts listed above based on type (e.g. Salaries - FERC 920; Outside Services - FERC 923, etc.). Cost drivers are determined for each A & G department and/or cost (e.g. Human Resources - # of employees; Property Insurance - Utility Plant in Service) and an allocation basis is assigned. Several allocation bases are used to allocate A & G costs. The most common allocation basis used is a three-factor formula that uses a combination of O & M expenses, # of employees, and Utility Plant in Service. FERC Account 922 includes A&G costs transferred to capital projects. Transmission's applicable share of these credits is based on the cash flow of Transmission projects.

## Nebraska Public Power District
## Worksheet C - Debt Service

| (A) Line No. | (B) Description | (C) Total | (D) Transmission | (E) All Other | (F) Description/Allocation Basis |
|---|---|---|---|---|---|
| 1 | Principal Payments on Long Term Debt | $ - | $ - | $ - | See Note A below |
| 2 | Principal Payments on Short Term Debt | - | - | - | See Note B below |
| 3 | Interest on Long Term Debt | - | - | - | See Note A below |
| 4 | Other Interest Expense | - | - | - | See Note B below |
| 5 | Other Debt Service Adjustments | - | - | - | Includes other debt service adjustments associated with prior debt issues, |

| | | | | | |
|---|---|---|---|---|---|
| | | | | | capitalized leases and other misc debt issues. Transmission's share of other debt service adjustments is through direct assignment. |
| 6 | Capitalized Interest | - | - | - | Long-term debt interest expense posted for GAAP purposes, but backed out in current year for rate making purposes as amounts are not paid in current year but built into future debt service payments. See Note A for further details. |
| 7 | Subtotal Debt Service | $ - | $ - | $ - | |
| 8 | Less: Interest Income & Other Revenues | - | - | - | Interest income is derived from investments in the revenue and debt service funds. Transmission's share of interest income is the allocable share of how each of these funds are ultimately used (revenue fund used to pay expenses; debt service funds used to pay debt). |
| 9 | Total Debt Service (Net) | $ - | $ - | $ - | |

Note A: Annual principal and interest payments for long-term debt are based on debt service schedules. Transmission's share of debt is based on the amount applicable to transmission projects. Transmission's share of general plant projects funded with long-term debt is determined on a project-by-project basis.

Note B: Annual principal payments on short-term debt and other interest expense are derived using a comprehensive write-off schedule for all projects funded with short-term debt. Transmission's share of debt is based on the amount specifically used to fund transmission projects. Transmission's share of general plant projects funded with short-term debt is determined on a project-by-project basis.

Notes:

A For Zonal ATRR and Schedule 1, NPPD to calculate Actual Revenues by applying the Year 1 rates from Step 3 to the actual loads included in the divisor for Year 1 in Step 7. For Base Plan Upgrades (BPU), Economic Upgrades (EU), and Requested Upgrades (RU), the Actual Revenues are those NPPD receives during Year 1.

B Sum of the daily short-term borrowings is supplied from the Finance Department.

C The amounts shown are for a full 12 month year, if the year is a partial year, divide the resultant True-Up amount by 12 and multiply by the months in the partial year.

D Rate to be based on Jan-March actual data for current year.

# Formula Rate Implementation Protocols

## Section I Annual Update and Annual True-Up

1. The Formula Rate Template set forth in Attachment H, Addendum 7 of Southwest Power Pool's ("SPP") Open Access Transmission Tariff ("OATT") and these Formula Rate Implementation Protocols ("Protocols") together comprise the filed rate by SPP for calculating Nebraska Public Power District's ("NPPD") Zonal Annual Transmission Revenue Requirement ("ATRR") for Transmission Service under the SPP OATT. NPPD must follow the instructions specified in the Formula Rate Template to calculate annually the rates for Network Integration Transmission Service ("NITS"), the rates for Schedule 1 Service, the rates for Point-to-Point services over facilities in SPP Zone 17 and the ATRR for Base Plan Upgrades and other network upgrades. These protocols shall apply to NPPD's calculation of its ATRR, including the calculation of the Annual True-Up ("Annual True-Up") and the projected net Zonal ATRR ("Annual Update").

2. The Formula Rate shall be recalculated annually with resulting rates applicable to service on and after January 1 of each calendar year through December 31 of the same calendar year ("Rate Year"). The resulting rates implemented each January 1 will be subject to review and true-up as further provided in the Protocols.

3. On or before August 1st, NPPD shall provide its Annual Update to SPP and cause such information to be posted on SPP's website and OASIS. The date of such posting is referred to herein as the "Annual Update Publication Date." On the same day, NPPD shall provide notice of such posting to all parties on an SPP email exploder list. Interested Parties ("Interested Parties") can contact SPP to subscribe to the SPP exploder list. For purposes of these protocols, the term Interested Party includes, but is not limited to customers under the SPP OATT, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general.

4. On or before May 1st, NPPD shall provide its Annual True-Up to SPP and cause such information to be posted on SPP's website and OASIS. The date of such posting is referred to herein as the "Annual True-Up Publication Date." On the same day, NPPD shall provide notice of such posting to all parties on an SPP email exploder list. Interested Parties can contact SPP to subscribe to the SPP exploder list.

5. NPPD shall request SPP to submit to FERC an Informational Filing as provided in Section V of these protocols.

6. If the date for posting the Annual True-Up or Annual Update falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day.

7. A change to the Formula Rate fixed inputs related to return on equity, incentive adders to return on equity, or revised depreciation rates may not be made absent an appropriate filing with FERC.

8. The Annual True-Up shall

   (a) Be based on actual data as recorded in the books and records of NPPD consistent with FERC accounting policies and practices.

   (b) Identify all material adjustments made to such actual data in determining formula inputs.

9. The Annual True-Up and Annual Update shall

   (a) Include a workable data-populated Formula Rate Template and underlying workpapers in native format with all formulas and links intact;

   (b) Provide the Formula Rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used;

   (c) Provide sufficient information to enable Interested Parties to replicate the calculation;

   (d) With respect to any change in accounting that affects inputs to the Formula Rate or the resulting charges billed under the Formula Rate ("Accounting Change"):

      (i) Identify any Accounting Changes, including

         - the initial implementation of an accounting standard or policy;
         - the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;
         - correction of errors and prior period adjustments that impact the calculation;
         - the implementation of new estimation methods or policies; and
         - changes to income tax elections;

      (ii) Identify items included in the calculation at an amount other than on a historic cost basis (e.g., fair value adjustments);

      (iii) Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs;

(iv) Provide, for each item identified pursuant to items I.9.d.i - I.9.d.iii of these protocols, a narrative explanation of the individual impact of such changes on the calculation; and

(v) Include for the applicable Rate Year the following information related to affiliate cost allocation;

- a detailed description of the methodologies used to allocate and directly assign costs between NPPD and its affiliates, if any, by service category or function for the applicable Rate Year, including any changes to such cost allocation methodologies from the prior year and the reasons and justifications for those changes; and

- the magnitude of any such costs that have been allocated or directly assigned between NPPD and each affiliate by service category or function for the applicable period.

10. NPPD shall hold an open meeting among Interested Parties ("Annual True-Up Meeting") no sooner than ten (10) days from the Annual True-Up Publication Date and no later than June 1st. No less than twenty (20) days prior to such Annual True-Up Meeting, NPPD shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual True-Up Meeting and NPPD shall provide notice of such meeting to the SPP email exploder list. The Annual True-Up Meeting will be hosted by NPPD in the forum of its choice which may include video conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. NPPD shall provide remote access for Interested Parties to participate in the meeting. The Annual True-Up Meeting shall (i) permit NPPD to explain and clarify its Annual True-Up, and (ii) provide Interested Parties an opportunity to seek information and clarification from NPPD about the Annual True-Up.

11. NPPD shall hold an open meeting among Interested Parties ("Annual Update Meeting") no sooner than ten (10) days from the Annual Update Publication Date and no later than August 31st. No less than twenty (20) days prior to such Annual Update Meeting, NPPD shall provide notice on SPP's website and OASIS of the time, date, and location of the Annual Update Meeting and NPPD shall provide notice of such meeting to an SPP email exploder list. The Annual Update Meeting will be hosted by NPPD in the forum of its choice which may include video conferencing, webinar, internet conferencing, phone conferencing, in person, or other similar options. NPPD shall provide remote access for Interested Parties to participate in the meeting. The Annual Update Meeting shall (i) permit NPPD to explain and clarify its Annual Update and (ii) provide Interested Parties an opportunity to seek information and clarification from NPPD about the Annual Update and Annual True-Up.

12. Each year NPPD shall endeavor to coordinate with other Transmission Owners in SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

**Section II Information Exchange Procedures**

1. Each Annual True-Up and Annual Update shall be subject to the following information exchange procedures ("Information Exchange Procedures"):

   (a) Interested Parties shall have until seventy-five (75) days following the Annual True-Up Publication Date to serve reasonable information and document requests related to the Annual True-Up; and sixty (60) days from the Annual Update Publication Date to serve reasonable information and document requests related to the Annual Update and the Annual True-Up ("Information Exchange Period"). If either of these dates falls on a weekend or a holiday recognized by FERC, the deadline for submitting all information and document requests shall be extended to the next business day. Such information and document requests shall be limited to what is necessary to determine:

      (i) the extent, effect or impact of an Accounting Change;

      (ii) whether the Annual True-Up or Annual Update fails to include data properly recorded in accordance with these protocols;

      (iii) the proper application of the Formula Rate and procedures in these protocols;

      (iv) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual True-Up or Annual Update;

      (v) the prudence of actual costs and expenditures, including the prudence of NPPD's procurement methods and cost control methodologies;

      (vi) the effect of any change to the underlying FERC Uniform System of Accounts; or

      (vii) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

The information and document requests shall not otherwise be directed to ascertaining whether the Formula Rate is just and reasonable.

(b) NPPD shall make a good faith effort to respond to information and document requests within fifteen (15) business days of receipt of such requests. Information requests received after 4 p.m. Central Prevailing Time shall be considered received the next business day.

(c) NPPD will cause to be posted on SPP's website and OASIS all information requests from Interested Parties and NPPD's response(s) to such requests; except, however, if responses to information and document requests include material deemed by NPPD to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by NPPD and the requesting party.

(d) NPPD shall not claim that responses to information and document requests provided pursuant to these protocols are subject to any settlement privilege, in any subsequent FERC proceeding addressing NPPD's Annual True-Up or Annual Update.

2. No later than December 20th of each year, NPPD, upon final approval of NPPD's Board of Directors, will provide SPP for posting on SPP's website and OASIS NPPD's Annual Update for SPP to include in the Zonal ATRR and resulting rates to become effective January 1st of the following calendar year.

## Section III Challenge Procedures

1. Interested Parties shall have until the later of thirty (30) days after NPPD's last response to information requests or November 21st (unless such period is extended with the written consent of NPPD or by FERC order) to review the inputs, supporting explanations, allocations and calculations and to notify NPPD in writing, which may be made electronically, of any specific Informal Challenges to the Annual True-Up and/or Annual Update. The period of time from the Publication Dates until the date Informal Challenges are due shall be referred to as the Review Period. If the date for submitting Informal Challenges falls on a weekend or a holiday recognized by FERC, the deadline for submitting all Informal Challenges shall be extended to the next business day. Failure to pursue an issue through an Informal Challenge shall not bar pursuit of that issue as part of a Formal Challenge with respect to the same Annual True-Up and/or Annual Update as long as the Interested Party has included at least one issue as part of an Informal Challenge with respect to that Annual True-Up and/or Annual Update. If the Interested Party has not included any issues as part of an Informal Challenge for an Annual True-Up and/or Annual Update, the Interested Party is barred from

pursuing a Formal Challenge with respect to any issue for that Annual True-Up and/or Annual Update but is not barred from pursuing an issue or from lodging a Formal Challenge as to such issue as it relates to a subsequent Annual True-Up or Annual Update.

2. A party submitting an Informal Challenge to NPPD must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. NPPD shall make a good faith effort to respond to any Informal Challenge within twenty (20) business days of notification of such challenge. NPPD, and where applicable, SPP, shall appoint a senior representative to work with the party that submitted the Informal Challenge (or its representative) toward a resolution of the challenge. If NPPD disagrees with such challenge, NPPD will provide the Interested Party(ies) with an explanation supporting the inputs, supporting explanations, allocations, calculations, or other information.

3. Informal Challenges shall be subject to the resolution procedures and limitations in this Section III.

4. Informal Challenges shall be limited to all issues that may be necessary to determine: (1) the extent or effect of an Accounting Change; (2) whether the Annual True-Up or Annual Update fails to include data properly recorded in accordance with these protocols; (3) the proper application of the Formula Rate and procedures in these protocols; (4) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual True-Up and Annual Update; (5) the prudence of actual costs and expenditures; (6) the effect of any change to the underlying FERC Uniform System of Accounts; or (7) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula. Any Interested Party seeking to challenge the prudence of actual costs or expenditures shall first raise the matter with NPPD in accordance with this Section III before pursuing a Formal Challenge.

5. NPPD will cause to be posted on SPP's website and OASIS all Informal Challenges from Interested Parties and NPPD's response(s) to such Informal Challenges; except, however, if Informal Challenges or responses to Informal Challenges include material deemed by NPPD to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by NPPD and the requesting party.

6. Any changes or adjustments to the Annual True-Up or Annual Update resulting from the Information Exchange and Informal Challenge processes that are agreed to by NPPD will be reported in the Informational Filing required pursuant to Section V of these protocols. Any such changes or adjustments agreed to by NPPD on or before November 30$^{th}$ will be reflected in the Annual Update for the upcoming Rate Year. Any changes or adjustments agreed to by NPPD after

November 30th will be reflected in the Annual True-Up for the year represented in the Annual Update, as discussed in Section IV of these protocols.

7. Interested Parties shall have until March 31st (unless such date is extended with the written consent of NPPD to continue efforts to resolve the Informal Challenge) to file any Formal Challenges to the Annual True-Up or Annual Update posted in the previous calendar year.

8. Formal Challenges shall be filed pursuant to these protocols and shall satisfy all of the following requirements.

   (a) A Formal Challenge shall:

      (i) Clearly identify the action or inaction which is alleged to violate the filed Formula Rate or protocols;

      (ii) Explain how the action or inaction violates the filed Formula Rate or protocols;

      (iii) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

         - The extent or effect of an Accounting Change;

         - Whether the Annual True-Up or Annual Update fails to include data properly recorded in accordance with these protocols;

         - The proper application of the Formula Rate and procedures in these protocols;

         - The accuracy of data and consistency with the Formula Rate of the charges shown in the Annual True-Up or Annual Update;

         - The prudence of actual costs and expenditures;

         - The effect of any change to the underlying FERC Uniform System of Accounts; or

         - Any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

(iv) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(v) State whether the issues presented are pending in an existing FERC proceeding or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(vi) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(vii) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(viii) State whether the filing party utilized the Informal Challenge procedures described in these protocols with regard to any issue.

(b) Any person filing a Formal Challenge must serve a copy of the Formal Challenge on NPPD. Service to NPPD must be simultaneous with any filing at FERC. Simultaneous service can be accomplished by electronic mail in accordance with 18 C.F.R. § 385.2010(f)(3), facsimile, express delivery, or messenger. The party filing the Formal Challenge shall serve the individual listed as the contact person on NPPD's Informational Filing required under Section V of these protocols.

9. All Formal Challenges shall be served on NPPD on the date of such filing as specified in Section III.8.b above. A Formal Challenge shall be filed in the same docket as NPPD's Informational Filing discussed in Section V of these protocols. NPPD shall respond to the Formal Challenge by the deadline established by FERC. A party may not pursue a Formal Challenge if that party did not submit any Informal Challenge during the applicable Review Period.

10. In any proceeding initiated by FERC concerning the Annual True-Up or Annual Update or in response to a Formal Challenge, NPPD shall bear the burden, consistent with section 205 of the Federal Power Act, of proving that it has correctly applied the terms of the Formula Rate consistent with these protocols, and that it followed the applicable requirements and procedures in these protocols. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

11. The implementation of any changes or adjustments resulting from any Formal Challenge made with FERC will be subject to: (1) approval by NPPD's Board of Directors; and (2) SPP Tariff Section 39.1.

12. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of NPPD to request SPP to file unilaterally, pursuant to Federal Power Act section 205 and the regulations thereunder, to change the Formula Rate or any of its inputs (including, but not limited to, rate of return and transmission incentive rate treatment), or to replace the Formula Rate with a stated rate, or the right of any other party to request such changes pursuant to section 206 of the Federal Power Act and the regulations thereunder.

13. No party shall seek to modify the Formula Rate under the Challenge Procedures set forth in these protocols, and the Annual True-Up and Annual Update shall not be subject to challenge by anyone for the purpose of modifying the Formula Rate. Any modifications to the Formula Rate will require, as applicable, a Federal Power Act section 205 or section 206 filing.

14. Any Interested Party seeking changes to the application of the Formula Rate due to a change in the FERC Uniform System of Accounts, shall first raise the matter with NPPD in accordance with this Section III before pursuing a Formal Challenge.

**Section IV Changes to Annual True-Up or Annual Update**

1. Except as provided in Section III.6 of these protocols, any changes to the data inputs, including but not limited to changes as the result of any FERC proceeding to consider the Annual True-Up or Annual Update, or as a result of the procedures set forth herein, shall be incorporated into the Formula Rate and the charges produced by the Formula Rate in the Annual Update for the next Rate Year. This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments.

   Interest on any refund or surcharge shall be calculated in accordance with the procedures outlined in Section VI of these protocols.

2. In the event that NPPD identifies an error in the Annual True-Up, or is required by applicable law to correct an error, NPPD shall correct such error in good faith and without regard to whether the correction increases or decreases NPPD’s revenue requirements, in a manner consistent with SPP Tariff Section 7.1. Nothing in these protocols should or may be construed as preventing Interested Parties or the FERC from protesting such correction as inappropriate.

## Section V Informational Filings

1. By January 15th of each year, NPPD shall request SPP to submit to FERC an informational filing ("Informational Filing") of its Annual Update for the Rate Year, including its Annual True-Up. This Informational Filing must include the information that is reasonably necessary to determine: (1) that input data under the Formula Rate are properly recorded in any underlying workpapers; (2) that NPPD has properly applied the Formula Rate and these procedures; (3) the accuracy of data and the consistency with the Formula Rate of the ATRR and rates under review; and (4) the extent of accounting changes that affect Formula Rate inputs. The Informational Filing must also describe any corrections or adjustments made during that period, and must describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. Within five (5) days of such Informational Filing, NPPD shall provide notice of the Informational Filing via an SPP email exploder list and by posting the docket number assigned to NPPD's Informational Filing on SPP's website and OASIS.

2. Any challenges to the implementation of the Attachment H - NPPD Formula Rate must be made through the Challenge Procedures described in Section III of these protocols and not in response to the Informational Filing.

## Section VI Calculation of True-Up Adjustment for the Annual True-Up

The True-Up Adjustment for the Annual True-Up will be determined in the following manner:

1. The projected ATRR included in the Annual Update for the previous year shall be compared to the actual revenue recovered during such period, calculated in accordance with Worksheet K of NPPD's Formula Rate Template. Actual costs incurred during the applicable calendar year will be compared to actual revenues, from the books and records of NPPD consistent with FERC accounting policies and practices, to determine any over- or under- recovery plus interest ("True-Up Adjustment"). The True-Up Adjustment and related calculations shall be posted as part of NPPD's Annual True-Up to SPP's website and OASIS no later than May 1st (or if that day falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day).

    (a) Interest on any over-recovery or any under-recovery of ATRR shall be determined using the interest rate equal to NPPD's actual short-term debt costs, calculated as NPPD's actual weighted average annual short-term interest rate, capped at the applicable FERC refund interest rate. The interest amount will be included in the Annual Update made available on August 1st. For purposes of the foregoing, short-term debt interest expense annual rate

shall be calculated in accordance with Worksheet K to the Formula Rate Template.

2. The Net ATRR for transmission services for the following year shall be the sum of the projected revenue requirement for the following year and a True-Up Adjustment for the previous year, including interest as explained above.

**Omaha Public Power District (OPPD)**

**Using _____ Actual Financial & Operating Data for Southwest Power Pool (SPP) Rates Effective _____**

| Note | **Notes** |
|---|---|

A The revenues credited include a) amounts received directly from the SPP for Point-to-Point transmission service where the demand is not included in the divisor, b) amounts from customers taking service under grandfathered agreements where the demand is not included in the rate divisor and c) imputed revenues related to short-term reservations of OPPD's merchant function. Revenue associated with Federal Energy Regulatory Commission annual charges, gross receipts taxes, ancillary services and facilities excluded from the Transmission Cost of Service are not included as revenue credits. Revenues from transmission customers whose coincident peak loads are included in the divisor of the load-ratio share calculation are not included as revenue credits. See Worksheet A for details.

B Includes income related only to transmission facilities. See Worksheet B for details.

C Base Plan Upgrades are calculated by applying the Base Plan Upgrade Fixed Charge Rate to the SPP-approved Base Plan Upgrade Plant. See Worksheet C, C1 and C2, etc. for details.

D Network Service coincident peaks is the utility's maximum monthly megawatt load for Requirements Service at the time of zonal coincident monthly peaks. Requirements Service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning) and includes OPPD's retail load and total requirements wholesale load. Long-term Point-to-Point includes long-term (greater than one year in duration) firm Point-to-Point transactions, including grandfathered reservations on OPPD's system and OPPD's marketing function long-term reservations. See Worksheet D for details.

E System control and load dispatch costs.

F Adjusts depreciation and amortization expense to reflect SPP Attachment AI plant adjustments. See Worksheet F for details.

G Revenue will be collected from both SPP load and grandfathered load. See Worksheet G for details.

H Includes all regulatory commission expenses that can be allocated to transmission (excluding Federal Energy Regulatory Commission Assessment Fees and Annual Charges - if applicable). Includes all safety-related advertising A&G expenses and General Plant accounts, and may be functionalized based on other methods rather than on wages and salaries. Full documentation must be provided. See Worksheet H for details.

I Additional revenue requirement for facilities receiving incentives. See Worksheet C1, C2 and I1 for details.

J The Federal Energy Regulatory Commission, in its Order No. 679 and No. 679-A, offers a 50-basis-point incentive adder for transmission owners joining an RTO as long as the return on equity for the transmission owner is within a zone of reasonableness. In order to be comparable with transmission owners in RTOs (including SPP), OPPD has included this 50-basis-point incentive adder in its revenue requirements.

K Removes cost of transmission service provided by others including OPPD account 565, department number 495, plus Western Area Power Administration transmission costs. Amount remaining is for facilities/maintenance costs on transmission. See Worksheet K for details.

L The Margin Requirement is the margin OPPD uses in calculating rates applicable to its native load customers. The Margin Requirement, in conjunction with depreciation and amortization expense, must cover OPPD principal payments, the minimum level of debt service coverage (ratio of net receipts to debt service) and an adequate return on equity to provide internally generated funds for OPPD's regular construction and working capital needs. Equity is also one of the factors contributing to OPPD's financial standing. OPPD sets its Margin Requirement based on a variety of financial ratios including Debt Service Coverage Ratio, Fixed Charge Ratio and earnings.

M Adjustments reflect the definition of transmission facilities under Attachment AI of the SPP tariff. Plant does not include Accounts 103, 105, 106 or 107, Experimental, Plant Held for Future Use, Completed Construction Not Classified and Construction Work in Progress, respectively, which are classified subsequent to the closing of the books for the year. OPPD does not have Common Plant.

N Removes transmission expenses included in the OATT ancillary services rates, including all of Account No. 561.

O Wages and salaries expensed.

P Includes all interest expense.

Q Includes Payments in Lieu of Taxes and Iowa taxes.

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)
References to data from FERC Form 1 are indicated as: #.y.x (page, line, column)

| Note Letter | |
|---|---|
| A | The balances in Accounts 190, 281, 282 and 283, as adjusted by any amounts in contra accounts identified as regulatory assets or liabilities related to FASB 106 or 109. Balance of Account 255 is reduced by prior flow throughs and excluded if the utility chose to utilize amortization of tax credits against taxable income as discussed in Note F. Account 281 is not allocated.<br>Deferred taxes exclude deferred taxes on true-up, regulatory assets, goodwill, facilities, or premium on asset acquisitions unless the underlying amount is included in rate base. |
| B | Identified in Form 1 as being only transmission related. |
| C | Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission<br>Prepayments are the electric related prepayments booked to Account No. 165. |
| D | EPRI Annual Membership Dues listed in Form 1 at 353.f, all Regulatory Commission Expenses itemized at 351.h, advertising except safety related and education and outreach related advertising included in Account 930.1. Line 47 - Regulatory Commission Expenses directly related to transmission service, ISO/RTO filings, or transmission siting itemized at 351.h.<br>All EEI lobbying expenses and EPRI industry association dues shall be excluded from the costs recoverable under the Formula Rate.<br>EEI or EPRI research, development and demonstration<br>expenses associated with projects in which transmission customers can voluntarily participate shall be recovered under the Formula Rate<br>only up to a maximum annual aggregate amount of $100,000. |
| E | Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year.<br>Taxes related to income are excluded. Gross receipts taxes that are retail related are not included in transmission revenue requirement. |
| F | The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (line 110).<br>For each Rate Year (including both Annual Projections and True-Up Adjustments) the statutory income tax rates utilized in the Formula<br>Rate shall reflect the weighted average rates actually in<br>effect during the Rate Year. For example, if the statutory tax rate is 10% from January 1 through June 30, and 5% from July 1 through<br>December 31, such rates would be weighted 181/365 and 184/365, respectively. |

| Inputs Required: | | | |
|---|---|---|---|
| | FIT = | 0.00% | |
| | SIT= | 0.00% | (State Income Tax Rate or Composite SIT from Wksht 6) |
| | p = | 0.00% | (percent of federal income tax deductible for state purposes) |

| | |
|---|---|
| G | Transmission related. |
| H | Note Deliberately left blank |
| I | ROE is fixed and no change in ROE may be made absent a filing with FERC.<br>Equity ratio shall be capped so as not to exceed sixty percent (60%), calculated on the basis of a 13 month average. Long term debt<br>percentage will be adjusted so that the capitalization ratio shall always equal 100. |
| J | Excludes amounts related to Asset Retirement Obligations. Depreciation rates are shown on Wksht 4 and do not change absent a filing with FERC. |
| K | The amortization for all regulatory assets will be booked to Account 566 |
| L | All transmission plant, transmission accumulated depreciation, CWIP, Unamortized Regulatory Asset--Project, Unamortized Abandoned Plant, transmission depreciation expense, Amortization of Regulatory Asset-Project, and Amortization of abandoned plant must be broken out by project on Attachment 1 and the applicable Wkshts.<br>Accordingly, the "T" allocator is equal to 1.00000. |
| M | Rent credits and credits for Other revenues exclude credits for facilities or expenses whose costs are not included in the formula rate. |
| N | ITC shall not seek rate recovery of payments to other Transmission Owners or their affiliates, other than payments for services rendered or assets acquired at net book value, without approval to recover those payments pursuant to a Section 205 filing. |
| O | Prepaid Pension Expense costs shall be excluded from rate base whether recorded in Account 165--Prepayments or in another account. |
| P | ITC will make a Section 205 filing for authority to create any Customer-Funded Reserve, and include a credit to rate base for any such Customer-Funded Reserves. |
| Q | Deferred income taxes directly related to transmission plant will be identified by project in Line 9a of Attachment 1. The balance of the ADIT will be allocated in distributed charges in Line 21 of Attachment 1. |
| R | The cost of projects for plant excluded from rate base, e.g., direct assignment facilities under SPP OATT Attachment AI, generator interconnections and generator step-up substations, will be shown as separate projects on Attachment 1 and thus excluded from rate base and revenue requirement of other projects. |
| S | Any revenues associated with costs in Accounts 561-561.8 will either offset the expenses or be revenue credited. pursuant to FERC Docket ER09-548 Settlement Terms, Section II. C. 1 |
| T | The Formula Rate shall include the annual amortization of gains and losses resulting from interest rate hedging; provided that the net cost (or cost reduction due to net gains) shall be limited in True-Up calculations so as not to exceed 6 basis points in the weighted average cost of capital. To determine the includable hedging costs or gains, ITC will multiply the total 3-component capitalization (LTD, PS and CS) by 0.0006, and compare the result to the hedging cost or gain amount amortized in the year. |
| U | The Formula Rate shall not recover any charges associated with a Regulatory Asset or Abandoned Plant until a filing is made under FPA Section 205 seeking to recover such charges and recovery has been authorized by the Commission. |
| V | Includes the amortization of any excess/deficient deferred income taxes resulting from changes to income tax laws, income tax rates (including changes in apportionment) and other actions taken by a taxing authority. The excess and deficient deferred income tax adjustment (page 3, line 75a) will reduce or increase income tax expense by the amount of the excess or deficiency (page 3, line 73a) multiplied by (1/1-T). |

(1) Actual Transmission Revenues as reported on Form 1, page 330 corresponding to Actual Net Revenue Requirement for services recovered through formula rate (projects shown here on Attachment 1). Actual Revenues do not include revenues treated as revenue credits in the formula, revenue from incentives (except for incentive true-up), and true-ups under the formula, but do include adjustments including out-of-period adjustments.
Actual Revenues shall be adjusted to add back Unpaid Obligations that otherwise reduce reported revenues.

(2) The number of months is equal to the sum of:
1/2 of the number of months during the period the over or under collection occurred, plus
The number of months between the last month in which the over or under collection occurred and the first month of the refund or surcharge for the over or under collection, plus
1/2 the number of months during the period the over or under collection is refunded or surcharged.

(3) Note deliberately left blank.

(4) SPP is required to design their charges such that the projected and trued-up revenue requirement for each project contained herein is recovered for each year in each year.

**Rate Base Adjustment for FAS 109 Regulatory Assets/(Liabilities) Table Instructions**

The purpose of the table 'Rate Base Adjustment for FAS 109 Regulatory Assets/(Liabilities)' on this worksheet is to show any adjustments for ratemaking for the applicable rate year.

In order to tie to inputs used in formula rate tariff, note that this table may include more information than the Excess/Deficient ADIT information required by FERC in Order No. 864.

These deferred tax account balances can also be found in the FERC Form No. 1 references or the footnotes therein.
Account No. 190 - FERC Form No. 1 Page 234, line 8, column c
Account No. 281 - FERC Form No. 1 Page 273, line 8, column k
Account No. 282 - FERC Form No. 1 Page 275, line 2, column k
Account No. 283 - FERC Form No. 1 Page 277, line 9, column k

Footnote A - Rate base adjustments can be found on the "ADIT Balance Worksheet" tab within the ending balance line for the above-referenced rate year.

Both the protected and unprotected portions for each amortization method/period need to be added together for each separate account (i.e., 190, 281, 282 and 283) to calculate the rate

base adjustment for that account.
The following table shows the columns associated with each account.

| Account | Columns |
|---|---|
| 190 | A & B |
| 281 | C & D |
| 282 | E, F & G |
| 283 | H & I |

**(Excess)/Deficient Amortization Entry Table Instructions**

The purpose of the '(Excess)/Deficient Amortization Entry' table of this worksheet is to show the (excess)/deficient amortization entries to Accounts 410.1 and 411.1 by deferred tax account.
The total (excess)/deficient amortization is the input for the formula rate template on Page 3, Line 73a of Attachment H.

Footnote B - The (Excess)/Deficient Amortization booked to Account 410.1 can be found on the "ADIT Balance Worksheet" tab within the "Amortization of Excess/Deficient ADIT" line in the section for the above-referenced rate year.
Both the protected and unprotected portions for each amortization method/period need to be added together for each separate account (i.e., 190, 281, 282 and 283) to calculate the total amortization for that account. If the total calculated amortization for an account is positive, then the (Excess)/Deficient Amortization is booked to Account 410.1.
Please see Footnote A above for the columns associated with each account.

Footnote C - The (Excess)/Deficient Amortization booked to Account 411.1 can be found on the "ADIT Balance Worksheet" tab within the "Amortization of Excess/Deficient ADIT" line in the section for the above-referenced rate year.

Both the protected and unprotected portions for each amortization method/period need to be added together for each separate account (i.e., 190, 281, 282 and 283) to calculate the total amortization for that account. If the total calculated amortization for an account is negative, then the (Excess)/Deficient Amortization is booked to Account 411.1.
Please see Footnote A above for the columns associated with each account.

64

The first populated version of the ADIT Balance Worksheet to be included in the
65 tariff will be populated starting with balances as of 12/31/16. Subsequent versions
66 will at a minimum show the prior year and current year balances.

The Tax Rate Change Remeasurement lines
in this worksheet are populated with
67 amounts from the respective tax
68 remeasurement tabs.

This ADIT Worksheet lists the amortization method associated with federal protected
69 excess/deficient deferred income taxes resulting from changes to income tax laws, income
70 tax rates and other actions taken by the federal taxing authority.

The company amortizes protected federal excess/deficient deferred
71 income taxes following amortization methods required under the
normalization provisions of the Internal Revenue code.
Beginning with the 2023 rate year, the company will utilize the Alternative Method
72 as defined in Internal Revenue Service, Revenue Procedure 2020-39, Section 2.08,
73 to amortize excess taxes from the Tax Cut and Jobs Act (“TCJA”).

This ADIT Worksheet lists the amortization period for unprotected excess/deficient deferred income taxes resulting
74 from changes to income tax laws, income tax rates (including changes in apportionments) and other actions taken
by a taxing authority that are not federal protected
excess/deficient
75 deferred income taxes.
The amortization

method used is detailed below.

*Where applicable add footnotes to explain amortization methods, periods, etc.*

# ITC Great Plains
# Formula Rate Implementation Protocols

October 23, 2009

## Section 1 Annual Projection

a. The formula rate template ("Template") and these Formula Rate Implementation Protocols ("Protocols") together comprise the filed rate ("Formula Rate") of ITC Great Plains for transmission service under the Southwest Power Pool ("SPP") Open Access Transmission Tariff ("OATT"). ITC Great Plains must follow the instructions specified in the Formula Rate to calculate annually its total projected Annual Transmission Revenue Requirements ("Projected Total ATRR") and its projected ATRR by individual project ("Projected Individual ATRR"). Cost recovery for each project shall be consistent with SPP's cost recovery assignments.

b. The Formula Rate and the Annual Projection (as defined in Section 1.c, below) produced by application of the Formula Rate shall initially be effective for service on and after August 18, 2009. Charges under the Formula Rate shall be recalculated each year. The Projected Total ATRR and Projected Individual ATRRs calculated under Attachment H-ITC Great Plains shall be applicable for service on and after each January 1 of a given calendar year through December 31 of such calendar year (the "Rate Year"), subject to review, challenge, true-up and refunds or surcharges with interest, as provided herein.

c. On or before September 1, 2009, and on or before September 1 of each succeeding Rate Year ("Posting Date"), ITC Great Plains shall recalculate both its Projected Total ATRR and its Projected Individual ATRRs, producing the updated charges for the upcoming Rate Year (the "Annual Projection") and shall cause an electronic version of the Annual Projection to be posted at a publicly accessible location on SPP's internet website.

    (i) If the Posting Date falls on a weekend or a holiday recognized by the FERC, then the Posting Date shall be the next business day.[1]

d. The Annual Projection shall be based upon FERC Form 1 reporting requirements as applicable to ITC Great Plains, FERC's orders establishing general transmission ratemaking policies applicable to ITC Great Plains, FERC's Uniform System of Accounts ("USoA"), the books and records of ITC Great Plains consistent with the USoA, ITC Great Plains' accounting policies and practices, and the SPP OATT provisions affecting the charges under the Formula Rate.

---

[1] Unless specified as a business day, "day" means "calendar day."

e. As part of the Annual Projection, ITC Great Plains shall include the following:

(i) ITC Great Plains' Projected Total ATRR, including information in workpapers regarding projected costs of plant in forecasted rate base, expected construction schedule and in-service dates. All inputs shall be provided in sufficient detail to identify the components of ITC Great Plains' Projected Total ATRR.

(ii) A recalculation of Projected Individual ATRRs.

(iii) A data-populated Template including fully functioning spreadsheet files, or as applicable, other native format data, showing all calculations in the Annual Projection, as well as all supporting calculations and workpapers that demonstrate and explain such information.

f. By October 1 of each year, ITC Great Plains shall hold a public meeting ("Customer Meeting") to explain the Annual Projection for the next calendar year and answer questions concerning the Annual Projection and the proposed True-Up Adjustment posted pursuant to Section II.a., below. ITC Great Plains will provide the opportunity for remote participation at Customer Meetings.

(i) To ensure that Interested Parties (as defined in Section 1.g., below) receive sufficient advance notice of Customer Meetings, ITC Great Plains shall schedule each Customer Meeting at least thirty (30) days in advance and cause such notice to be posted at a publicly accessible location on SPP's internet website, and provide Interested Parties notice of the Customer Meeting via e-mail to the most recent e-mail address provided by the Interested Party to ITC Great Plains.

g. Any intervenor in FERC Docket No. ER09-548, any transmission customer or eligible customer under SPP's OATT, state regulatory commissions, state consumer advocates, and FERC staff ("Interested Parties") may submit questions to ITC Great Plains regarding the Annual Projection until October 15, and ITC Great Plains shall use best efforts to post written responses within 15 days of receipt, but no later than November 1.

h. ITC Great Plains shall modify the Annual Projection to reflect any changes that it and the Interested Parties agree upon and shall cause the revised Annual Projection to be posted at a publicly accessible location on SPP's internet website. Changes posted prior to November 15[2] shall be reflected in the charges for the Rate Year beginning on the following January 1. Changes posted after November 15 will be reflected in the True-Up Adjustment for the Rate Year.

---

[2] In the event that the SPP is no longer required to make a tariff filing to reflect ITC's Projected ATRR in the SPP OATT, and to the extent consistent with applicable Commission precedent, the November 15 deadline may be delayed or extended until December 1.

## Section 2 True-Up Adjustment

a. On or before June 1, 2010, and on or before June 1 of each succeeding Rate Year ("Publication Date"), ITC Great Plains shall calculate the Actual Annual Transmission Revenue Requirement ("Actual Total ATRR") and the Actual ATRR by individual project for the preceding calendar year pursuant to the Formula Rate ("Actual Individual ATRRs") (Attachment H-ITC Great Plains, Appendix A) and cause them to be posted at a publicly accessible location on SPP's internet website, and shall submit the True-Up Adjustment to the Federal Energy Regulatory Commission ("FERC" or "Commission") in an informational filing.

(i) If the Publication Date falls on a weekend or a holiday recognized by the FERC, then the Publication Date shall be the next business day.

(ii) The informational filing with the Commission is not intended to be subject to the Commission's notice requirements, but any such lack of notice does not limit the Commission's authority to initiate a proceeding on its own motion.

b. The True-Up Adjustment for the Rate Year:

(i) shall be calculated for the individual project revenue requirements and shall equal the respective Actual Individual ATRRs less the Projected Individual ATRRs for each project. In the event SPP does not bill the Projected Individual ATRR charges, the True-Up Adjustment shall be calculated as Actual Individual ATRRs less the Actual Revenues (equal to the charges actually billed by SPP for transmission service during the Rate Year). In no case shall the True-Up be calculated such that ITC recovers (i) more than its Actual Individual ATRRs; or (ii) any Unpaid Obligations. Unpaid Obligations shall be defined as any ITC charges that were billed by SPP (whether zonal or SPP-wide) but which SPP did not actually collect. ITC commits to use commercially reasonable efforts to obtain from SPP, and make available to Interveners in FERC Docket No. ER09-548, data concerning both amounts that are billed and those collected with respect to the ITC charges in order to ensure that no adjustment for Unpaid Obligations is included.

(ii) shall include a data-populated Template (*i.e.*, a working spreadsheet) showing all calculations in the Actual Total ATRR and in the Actual Individual ATRRs as well as all supporting calculations and workpapers that demonstrate and explain information not otherwise set out in ITC Great Plains' FERC Form 1.[3]

(iii) shall be based upon ITC Great Plains' FERC Form 1 for the most recent calendar year, FERC Form 1 reporting requirements as applicable to ITC Great Plains, FERC's orders establishing general transmission ratemaking policies applicable to ITC Great Plains, FERC's USoA, the books and records of ITC Great Plains consistent with the USoA, ITC Great Plains' accounting policies and practices, and the SPP OATT provisions affecting the charges under the Formula Rate.

(iv) shall provide supporting documentation for all data (and all adjustments thereto or allocations thereof) not otherwise available in the FERC Form 1 that are used in the Formula Rate;[4]

(v) shall include disclosure of and an explanation of changes in ITC Great Plains' accounting policies and practices with respect to capitalization policy, changes in the application of the FERC USoA that result in the recording of transactions in a different account, and changes in the FERC USoA and Form 1 reflected in the current True-Up Adjustment calculation of Actual Total ATRR and Actual Individual ATRRs from those in effect for the previous year's True-Up Adjustment calculation, to the extent such changes, individually or in the aggregate affect the charges calculated under the Formula Rate ("Material Accounting Changes"). To the extent there are Material Accounting Changes, ITC Great Plains shall disclose those in its FERC Form 1 and/or Form 3-Q, available at the FERC website (www.ferc.gov);

---

[3] If the referenced form is superseded, the successor form(s) shall be utilized and supplemented in order to provide equivalent information for the Formula Rate template with the same level of detail as in the superseded form.

[4] It is the intent of the Formula Rate, including the supporting explanations and allocations described therein, that each input to the Formula Rate True-Up Adjustment will either be taken directly from the FERC Form 1 or reconcilable to the FERC Form 1 by the application of clearly identified and supported information. Where the reconciliation in the True-Up Adjustment is provided through a worksheet included in the filed Formula Rate template, the inputs to the worksheet must meet this transparency standard, and doing so will satisfy this transparency requirement for the amounts that are output from the worksheet and input to the main body of the Formula Rate.

(vi) shall include disclosure of known changes in (1) FERC's USoA; (2) FERC Form No. 1 reporting requirements; (3) FERC's orders establishing general transmission ratemaking policies applicable to ITC Great Plains; or (4) SPP OATT provisions affecting the charges under the Formula Rate that have occurred since the later of the effective date or the posting of the most recent such disclosure, to the extent that items (1) through (4) above have an effect on the charges under the Formula Rate or calculation of the Annual Projection or True-Up Adjustment, as applicable;

(vii) shall be subject to review and challenge in accordance with the procedures set forth in Sections 3 and 4 of these Protocols; and

(viii) shall be subject to review and challenge with respect to the prudence of any costs and expenditures included for recovery in the True-Up Adjustment; provided, however, that nothing in these Protocols is intended to modify the Commission's applicable precedent with respect to the burden of going forward or burden of proof in such prudence challenges.

c. If any changes to the data inputs, including but not limited to revisions or restatements of ITC Great Plains' Form 1 or changes resulting from any FERC proceeding to consider a True Up Adjustment, would affect the charges collected under the Formula Rate for any Rate Year, such corrections and any resulting adjustment(s) to the past Actual Total ATRR and past Actual Individual ATRRs shall be identified and reflected in the True-Up Adjustment for the next effective Rate Year, with interest as provided herein. ITC shall promptly notify the Interested Parties of such changes and file a correction to the True-Up Adjustment with FERC as an amended informational filing and provide a copy to the SPP for prompt posting at a publicly accessible location on the SPP internet website. Such corrections shall be reflected, with Interest as calculated pursuant to section 2.d, below, in the next True-Up and Annual Projection. Review of corrections to any True-Up Adjustment reflected in an Annual Projection will be conducted during the process surrounding the Annual Projection and True-Up Adjustment in which the corrections are reflected.

d. Interest on any over-recovery of the net revenue requirement shall be determined based on the interest rates set forth in the Commission's regulations at 18 C.F.R. § 35.19a. Interest on any under-recovery of the net revenue requirement for the current True-Up Adjustment shall be determined using the interest rate equal to the lower of the FERC interest rate or the rate on any ITC Great Plains revolving credit facility. In either case, the interest payable shall be calculated using the average of the interest rates used to calculate the time value of money for the twenty-four (24) months during which the over- or under-recovery in the net revenue requirement exists. The interest rate to be applied to the over- or under- recovery in the net revenue requirement will be determined using the average of the interest rates for the nineteen (19) months preceding August of the current year.

(i) Interest on any over- or under-recovery due to corrections for preceding True-Up Adjustment Rate Years shall be calculated monthly on such over- or under-recovery from July 1 of the corrected Rate Year through June 30 of the Rate Year in which such over- or under-recovery is reflected ("Correction Period"), as illustrated in Attachment 1 to these Protocols. The applicable interest rates for an over-recovery shall be as computed on Worksheet 8 to the Formula Rate. The applicable interest rates for an under-recovery shall be as computed on Worksheet 8 to the Formula Rate.

e. The Formula Rate shall not recover any charges associated with a Regulatory Asset or Abandoned Plant until ITC has made an FPA Section 205 filing seeking to recover such charges and has been authorized by the Commission to do so.

**Section 3 Annual Review Procedures**

Each True-Up Adjustment shall be subject to the following review procedures ("Annual Review Procedures"):

a. Interested Parties shall have the longer of 135 days after each annual Publication Date or until October 15 to serve reasonable information requests on ITC Great Plains ("Review Period"). Such information requests shall be limited to what is necessary to determine if ITC Great Plains has properly calculated the Annual Projection and the True-Up Adjustment and its components (including any corrections pursuant to Section 2.c) according to the procedures in these Protocols, whether the costs included in the True-Up Adjustment are properly recorded (including whether the costs are appropriately recovered by ITC Great Plains and whether the costs were put in correct accounts and in the correct amounts), prudently incurred, and otherwise consistent with ITC Great Plains' accounting policies and practices consistent with the USoA, whether the Formula Rate has been applied according to its terms including the procedures in these Protocols, and whether there has been a change in the application of the Formula Rate due to a change in (1) FERC's USoA; (2) FERC Form No. 1 reporting requirements; (3) FERC's orders establishing general transmission ratemaking policies applicable to ITC Great Plains; or (4) SPP OATT provisions affecting the charges under the Formula Rate, to the extent that items (1) through (4) above have an effect on the Formula Rate or calculation of the Annual Projection or True-Up Adjustment, as applicable. Information requests shall not solicit information concerning costs or allocations where the costs or allocation method have been determined by FERC with respect to this Formula Rate (or resolved by a settlement with respect to this Formula Rate accepted by FERC) or in the context of True-Up Adjustments for other years, except that such information requests shall be permitted if they seek to determine (i) whether a prior year's approach on a given matter was the same or different from the current year's approach, (ii) whether there have been changed circumstances, or (iii) in connection with corrections pursuant to Section 2.c.

b. ITC Great Plains shall make a good faith effort to respond to information requests (the scope of which is defined in subsection a, above) within fifteen (15) days of receipt of such requests, but no later than November 1. Information requests received after 4 p.m. CPT shall be considered received the next business day.

c. If ITC Great Plains and any Interested Party are unable to resolve disputes related to information requests submitted in accordance with these Annual Review Procedures, ITC Great Plains or the Interested Party may petition FERC to appoint an Administrative Law Judge as a discovery master. The discovery master shall have the power to issue binding orders to resolve discovery disputes and compel the production of information, as appropriate, in accordance with the Annual Review Procedures and consistent with FERC's discovery rules.

d. Interested Parties shall have until the latest of thirty (30) days after the production of all information, including the production of information as a result of the resolution of a discovery dispute under Section 3.c, thirty (30) days after resolution of a dispute that does not result in the production of additional information, or November 30 to notify ITC Great Plains in writing of any specific challenges, including challenges to the application of the Formula Rate or any specific challenges based on Material Accounting Changes or changes in (1) FERC's USoA; (2) FERC Form No. 1 reporting requirements; (3) FERC's orders establishing general transmission ratemaking policies applicable to ITC Great Plains; or (4) SPP OATT provisions affecting the charges under the Formula Rate, to the extent that items (1) through (4) above have an effect on charges under the Formula Rate or calculation of the Annual Projection or True-Up Adjustment, as applicable ("Preliminary Challenge"). The time period for Interested Parties to raise Preliminary Challenges is the "Preliminary Challenge Period."

e. ITC Great Plains may not propose any changes to the Formula Rate by means of the Annual Projection or True-Up Adjustment. Any modifications to the Formula Rate will require a FERC order.

**Section 4 Resolution of Challenges**

a. ITC Great Plains shall provide a written response to any Preliminary Challenge submitted to it within fifteen (15) business days of receipt. Its written response shall notify the Interested Party of the extent to which ITC Great Plains agrees or disagrees with the position raised by the Interested Party, and what, if any, modifications to the True-Up Adjustments will result. If ITC Great Plains disagrees with the Preliminary Challenge, it shall provide supporting documentation with its response.

b. If ITC Great Plains and any Interested Party(ies) have not fully resolved to all Interested Party's(ies') satisfaction any Preliminary Challenge, an Interested Party shall have the right to file a challenge with the FERC, pursuant to Section 206 or 306 of the Federal Power Act ("Formal Challenge"). Any Formal Challenge must be filed

with FERC by the later of (i) thirty (30) days after receipt of ITC Great Plains' response to a Preliminary Challenge, or (ii) January 19, and shall be served on ITC Great Plains by electronic service on the date of such filing; however, there shall be no need to make a Formal Challenge or to await conclusion of the Preliminary Challenge Period if the FERC already has initiated a proceeding to consider the True-Up Adjustment.

c. Failure to notify ITC Great Plains of a Preliminary Challenge shall not bar pursuit of the issue (i) in a Formal Challenge, and/or (ii) in a subsequent True-Up Adjustment review.

d. If ITC Great Plains and any Interested Party(ies) agree upon a resolution to a Preliminary Challenge, such resolution shall be reflected in the Annual Projection as provided in Section 1.h, if resolution is reached by November 8. Otherwise, any resolution to a Preliminary Challenge, or a Formal Challenge, if applicable, shall be reflected in the first True-Up Adjustment following resolution of the challenge, with interest as provided herein.

e. Any response by ITC Great Plains to a Formal Challenge must be submitted to the FERC within the time period specified by a FERC notice in response to the Formal Challenge, or, if no such notice is issued, within thirty (30) days of the date of the filing of the Formal Challenge, unless such time period is extended by the mutual agreement of ITC Great Plains and the Interested Party filing a Formal Challenge or by FERC, and shall be served on the filing Party(ies) by electronic service on the date of such filing.

f. In any proceeding concerning a given year's True-Up Adjustment (including corrections) or Material Accounting Change(s), ITC Great Plains shall demonstrate the justness and reasonableness of the rate resulting from its application of the Formula Rate by demonstrating that it has reasonably and accurately calculated the True-Up Adjustment and/or reasonably adopted and applied the Material Accounting Change.

g. Failure to file a Formal Challenge regarding an issue raised in a Preliminary Challenge shall not bar pursuit of such issue(s) or the filing of a Formal Challenge as to such issue(s) as relates to a subsequent True-Up Adjustment review.

h. All information and correspondence produced pursuant to these Protocols may be included in any Formal Challenge, in any other proceeding concerning the Formula Rate initiated at FERC pursuant to the Federal Power Act, or in any proceeding before a U.S. Court of Appeals to review a FERC decision concerning the Formula Rate.

i. Nothing herein shall be deemed to limit in any way the right of ITC Great Plains to file unilaterally, pursuant to FPA Section 205 and the regulations thereunder, to change the Formula Rate or any of its inputs (including, but not limited to, ROE), or

to replace the Formula Rate with a stated rate, or the right of any other party or FERC acting *sua sponte* to request such changes pursuant to Section 206 of the Federal Power Act and the regulations thereunder.

j. These Protocols in no way limit the rights of ITC Great Plains or any party or FERC acting *sua sponte* to initiate a proceeding at FERC at any time with respect to the Formula Rate or any Annual Projection or True-Up Adjustment consistent with the party's full rights under the Federal Power Act, including Sections 205, 206 and 306, and FERC's regulations.

k. Neither failure to notify ITC Great Plains of a Preliminary Challenge, nor failure to file a Formal Challenge, nor failure to exercise any rights under FPA Sections 205, 206, and 306 and FERC's regulations in any given year shall be construed as a bar to raising any issue in any proceeding initiated at FERC; however, neither ITC Great Plains nor any Interested Party shall be precluded from raising any such failure or the reason for such failure as a factor(s) to be considered by the Commission in resolving such issue.

l. In response to a FERC order on a challenge under FPA Section 306, ITC may be required to correct past errors resulting in a charge being collected other than that authorized under the Formula Rate.

**Section 5 Construction Work in Progress**

a. Accounting. For transmission projects where ITC Great Plains has been authorized by the Commission to include 100 percent of Construction Work in Progress ("CWIP") in transmission rate base ("incentive transmission project"), ITC Great Plains shall use the following accounting procedures to ensure that it does not recover an Allowance for Funds Used During Construction ("AFUDC") for such project.

(i) ITC Great Plains shall assign each authorized incentive transmission project a unique Funding Project Number ("FPN") for internal cost tracking purposes.

(ii) ITC Great Plains shall record actual construction costs to each FPN through work orders that are coded to correspond to the FPN for each incentive transmission project. Such work orders shall be segregated from work orders for non-incentive transmission projects for which the Commission has not authorized ITC Great Plains to include any portion of CWIP in rate base. The fixed asset accounting system requires certain basic information to establish a work order, such as whether the work order is eligible for AFUDC.

(iii) For each incentive transmission project ITC Great Plains shall prepare monthly work order summaries of costs incurred under the associated FPN. These summaries shall show monthly additions to CWIP and plant in

service and shall correspond to amounts recorded in ITC Great Plains' FERC Form 1. ITC Great Plains shall use these summaries as data inputs into the Annual Update calculated pursuant to Section 1. ITC Great Plains shall make such work order summaries available upon request under the Annual Review Procedures of Section 3.

(iv) When an incentive transmission project, or portion thereof, is placed into service, Accounting shall cause the fixed asset accounting system to transfer the accumulated charges from account 107 - CWIP to account 106 – Completed Construction Not Classified. The result of this transfer is that ITC Great Plains deducts from the total CWIP the accumulated charges for work orders under the FPN for that project, or portion thereof. The purpose of this control process is to ensure that expenditures are not double counted as both CWIP and as plant in service.

(v) For non-incentive transmission projects, ITC Great Plains shall record AFUDC to be applied to CWIP, exclusive of the portion of such CWIP for a non-incentive project that is included in rate base pursuant to Commission authorization, and capitalized when the project is placed into service.

b. Annual Reporting. For transmission projects where ITC Great Plains has been authorized by the Commission to include any portion of CWIP in transmission rate base, ITC Great Plains shall post the following information concerning each such projects at a publicly accessible location on SPP's internet website at the time of ITC Great Plains' Annual Update that shall include the following information concerning each such projects:

(i) the actual amount of CWIP recorded for each project through the most recently reported quarter end;

(ii) the resulting effect on the CWIP revenue requirement for the most recently completed year;

(iii) a statement of the current status of each project; and

(iv) the estimated in-service date for each project.

**ITC Great Plains**
**Formula Rate Implementation Protocols**

## Attachment 1

### Example of Calculation of Interest on Over- or Under-Recovery due to Corrections in Previous Years (Protocols, Section 2.e(i))

i) If the rate year 1 is completed, and the revenue requirement is initially identified in year 2, but then subsequently corrected in time to incorporate the corrected true-up in year 3, then interest would be computed for the 24 month period from mid-year of the cost year until mid-year of the true-up year.

ii) However, if the correction was identified after the true-up adjustment was incorporated in charges to customers in year 3, but in time to incorporate a true-up adjustment in year 4, then the amount of the adjustment would be computed for a 36 month period.

iii) For example, if the initial under-recovery principal amount was $1000 in year 1, and the interest rate on under-recoveries was 3% per year and the interest rate on over-recoveries was 5%, then ordinarily the amount to be recovered from ratepayers in year 3 would be $1060.

iv) However, if there were a correction, such that the under-recovery principal amount was $2100 in year 1, (rather than the $1,000 under recovery in (iii) above), and the corrected amount was not incorporated into charges until year 4, then ratepayers would be charged $1060 in year 3, and charged [($2100 - $1000) x .03 x 3) ] + ($2100 - $1000) = $1199 in year 4.

v) However, if there were a correction such that the principal amount was an $1100 over-recovery in year 1 (rather than the $1,000 under recovery in (iii) above), and the corrected amount was not incorporated into charges until year 4, ratepayers would be charged $1060 in year 3, then ratepayers would be credited as follows:

[($1100 + $1000) x .05 x 3)] + ($1100 + $1000) = $2415 in year 4.

# Addendum 10 to Attachment H – Part 1A

**Evergy Metro Inc.(EMe)**

**Rate Formula Template**

**Table of Contents**

**Overview**

The formula is calculated in two steps. The first step is to fill out Tabs A-1 thru A-11, and the Actual Gross Rev Req tab with data from the previous year's Form 1. This data input results in the calculation of the actual annual transmission revenue requirement (Actual ATRR) for the previous year, as shown in the Actual Net Rev Req tab. The results of this calculation are presented to the customers for review no later than June 1 each year.

The TU (True-up) tab uses the Actual ATRR from the Actual Net Rev Req tab and compares it to the Projected ATRR (without the True-up for a prior year) that customers were billed for the same period. Interest is added to the difference and the adjusted true-up then is included in the Projected Net Rev Req tab.

The projected O&M and plant balances are calculated in Tabs P-1 thru P-5. These sheets feed into the Projected Gross Rev Req tab and ultimately into the Projected Net Rev Req tab. The RTO Projects Smry tab retrieves project specific data from other tabs to calculate the amount of revenue requirements associated with those projects which are contained in the total Projected Gross Revenue Requirement amount. The Spon Projects Smry tab does the same process for Sponsored projects. The total revenue requirements for these two groups of upgrades and revenue credits are subtracted from the EMe total revenue requirement to obtain the Zonal ATRR (line 20, before true-up). This calculation is shown on the Projected Net Rev Req tab. This tab also calculates the point-to-point zonal rates. SPP rates are set on the trued up Base Plan Net Revenue Requirements, Balanced Portfolio Net Revenue Requirements, and ITP/Priority Projects Net Revenue Requirements as well as the trued up Zonal Net Revenue Requirements. The specific charges are defined under the SPP Open Access Transmission Tariff.

Cells highlighted in yellow are data input cells. Some cells may reference the results from other calculations in the formula. Such cell references may change from year to year, requiring manual adjustment of the reference or the direct entry of the proper value.

| Filed Page | Tab | Description |

EVERGY METRO INC.. (EMe)

(EMe)

General Note: References to pages in this formula rate are indicated as: (page#, line#, col.#).

References to data from FERC Form 1 are indicated as: page#.line#.col

| Note Letter | |
|---|---|
| **A** | Reserved for future use. |
| **B** | Includes only Transmission plant. |
| **C** | Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 2, line 7, col. 7.<br>Prepayments are the electric related prepayments booked to Account No. 165 and reported on FERC Form 1, p. 111, ln. 57.c. |
| **D** | Expenses recorded in Account 565, Transmission of Electricity by Others, are not recoverable through the formula rate. |
| **E** | Lease and joint facilities charges included on line 6, page 2 of 5, are those costs attributable to transmission facilities. |
| **F** | Transmission O&M on this line does not include any SPP charges for Schedule 1-A of the SPP OATT. |
| **G** | Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year.<br>Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template. |
| **H** | The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "percentage of federal income tax deductible for state income tax purposes". Furthermore, a utility that elected to utilize amortization of tax credits against taxable income rather than book tax credits to Account 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 2, line 21). When FIT or SIT statutory tax rate changes take effect on other than a calendar year basis, the statutory rates to be used in the formula rate template shall be weighted averages for the calendar year determined by weighting the statutory tax rates by the number days each such tax rate was in effect during the calendar year for which the costs are being determined. KCMO Earnings Tax is not included in the calculation of the Composite State Income Tax Rate. |

Inputs Required: FIT = 0.00% Federal Income Tax Rate

| | | |
|---|---|---|
| SIT= | 0.00% | Composite State Income Tax Rate or Composite SIT |
| p = | 0.00% | Percentage of federal income tax deductible for state income tax purposes |

The Composite State Income Tax Rate reflects the effective rate for each tax jurisdiction, as well as the Composite Portion of FIT Deduction in State Returns:

| | Apportionment Factor | Rate | Effective Rate | % of FIT Deductible | Portion of Fed Tax Deductible = p |
|---|---|---|---|---|---|
| Missouri | 0.00% | 0.00% | 0.0000% | 0.00% | 0.00% |
| Kansas | 0.00% | 0.00% | 0.0000% | 0.00% | 0.00% |
| KS City | 0.00% | 0.00% | 0.0000% | 0.00% | 0.00% |
| Composite State Income Tax Rate | | | 0.0000% | | |
| Composite Portion of FIT Deduction for State Returns | | | | | 0.00% |

**I** Removes transmission plant determined by Commission order to be excluded from RTO transmission rate base under Docket No. EL08-89-000 (to the extent FERC Form 1 balances are not adjusted).

**J** Unless otherwise specified, OATT refers to the EMe and SPP OATTs.

**K** Removes generator step-up facilities determined by Commission order to be excluded from RTO transmission rate base under Docket No. EL08-89-000 (to the extent FERC Form 1 balances are not adjusted).

**L** Reserved for future use.

**M** If the transmission related component of property tax is specifically identified in Form 1, then a TP allocator shall be used. Property tax shall be allocated to transmission by the GP allocator if transmission related property tax is not specifically identified in the Form 1.

**N** Beginning in 2009, included in page 256 notes of the FERC Form 1, the long term interest expense and preferred dividends and a 13-month average balance for long-term debt, preferred stock and common equity of Great Plains Energy will be provided. This information will be the reference for the capital structure and weighted cost of long term debt and preferred stock.

**O** The Noncontrolling Interest represents a third party's 50% investment in one of GPE's consolidated subsidiaries reported on the consolidated balance sheet's equity section separate from the parent's equity, as required by generally accepted accounting principles effective January 1, 2009.

**P** The approved ROE is 11.1%. No change in ROE may be made absent a filing with FERC. Any

incentive ROEs approved by the Commission are shown by project in Worksheet A-9.

**Q** The current depreciation rates used to calculate depreciation expense and accumulated depreciation balances are shown in worksheet A-5.

**R** The Post-Employment Benefits Other than Pensions (PBOP) expense projected for FY 2010 set forth below will be used in lieu of the actual PBOP in 2009 and subsequent years absent a filing with FERC that alters the amount.

| | |
|---|---|
| Post-Employment Benefits Other than Pensions | $8,598,615 |

**S** The Unamortized Abandoned Transmission Plant can only be included in rate base if authorized by the Commission.

**T** CWIP balances only included as authorized by the Commission. Regulatory liability offsets AFUDC accrual where CWIP is not included in state-regulated rate base.

***U*** *Includes the amortization of any excess/deficient income taxes resulting from changes to income tax rates (including changes in apportionment) and other actions take by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/1-T).*

***V*** Reserved for future use.

**ALLOCATION FACTORS**

| Line No. | Allocators | Description | Location of Calculation or First Use of Allocator |
|---|---|---|---|
| 1 | **TP** | Percentage of transmission plant included in rate base. | Page 3, line 5, col 6 |
| 2 | **W/S** | Percentage of transmission labor included in rates | Page 4, line 5a, col 7 |
| 3 | **DA** | Direct assignment | First used on page 1, line 2, col 6 |
| 4 | **GP** | Ratio of allocated transmission, general, & intangible plant to total gross plant. | Page 3, line 11, col 6 |
| 5 | **NA** | Not applicable for the transmission formula rate. | First used on page 2, line 16, col 6 |

| | | | | |
|---|---|---|---|---|
| 6 | **NP** | Ratio of net transmission, general, & intangible plant to total net plant. | 6 | Page 3, line 23, col |

**NOTES:**

**1** ADIT items in each account will be in the same order as the prior year with any new line items, relative to the prior year, to be highlighted and added at the end of the list of items for each account. A line item maybe deleted when the amount for the line item has been zero through one complete rate cycle.

**2** ADIT impacts related to Contributions in Aid of Construction (CIAC) shall be designated as non-transmission related unless both of the following conditions apply: a) the facility for which the CIAC is paid is a Transmission Facility pursuant to Attachment AI of the SPP Open Access Transmission Tariff, and b) the FERC-approved tariffs or rate schedules under which the payment is made do not provide for full recovery by EMe of the ADIT impacts. More generally, ADIT items that are to be treated as 100% Non-Transmission should be so treated on the basis of the actual tax item, not based on the title used.

**Average Allocated EDIT Balance** -

Notes:

A *Each EDIT item is categorized into 1 of 5 categories. The selected category will will determine the Allocator applied to the EDIT balance.*

*1) NonTrans: The EDIT balance is 100% unrelated to the Transmission of electricity and the NA Allocator is applied.*

*2) Retail: The EDIT balance is 100% related to retail operations and the NA Allocator is applied.*

*3) Trans: The EDIT balance is 100% related to transmission operations and the DA Allocator is applied.*

*4) Plant: The EDIT balance is related to Property, Plant, & Equipment "PP&E" and the GP Allocator is applied.*

*5) Labor: The EDIT balance is labor related and the W/S Allocator is applied.*

*B Includes the impact of tax rate changes enacted during the period and adjustments to prior year activity. C EDIT balances exclude income tax gross-ups recorded to accounts 182.3 and 254*

**Notes:**
**1**

EMe adopted a composite depreciation calculation in FY 2009 based on allocation methods of the predominant regulatory jurisdiction applied to the approved depreciation rates for each jurisdiction. Missouri is the predominant jurisdiction for EMe based upon size of load. Although the specific weighting values will change from year to year, the allocation methods (column g) and the stated jurisdictional depreciation rates (columns b, d, and f) documented in the above table will not change without an order from the Commission approving the new methods or depreciation rates. As the formula rate is updated each year, the above table will be populated with allocation factors reflecting the approved methods in order to calculate a composite depreciation rate for each line.

**2**

The Allocation Basis codes in the above table represent the weighting methods to apply to the approved jurisdictional depreciation rates to calculate composite depreciation expense on an account-specific basis for FERC Form No. 1. Following is the definition of each code:

**C2** The customer allocator is based on the number of customers receiving power in each regulatory jurisdiction.

**D** The demand allocator is based on the monthly coincident peak (CP) demands for each jurisdiction.

**E1** The energy allocator is based on the total annual kilowatt-hour usage of each jurisdiction's customers, adjusted for line losses.

**PP** The Gross PP allocator reflects the total gross production plant value allocated and specifically assigned to each jurisdiction as a percentage of EMe total gross production plant.

**PTD** The Gross PTD allocator reflects the total gross production, transmission, and distribution plant value allocated and specifically assigned to each jurisdiction as a percentage of EMe total gross production, transmission, and distribution plant.

**T&D** The Gross T&D allocator reflects the total gross transmission and gross distribution plant value allocated and specifically assigned to each jurisdiction as a percentage of EMe total gross transmission and gross distribution plant.

**S** The steam plant allocator is a blend of the demand allocator (D) and the energy allocator (E1), based on the percentage of gross production plant devoted to non-environmental and environmental functions, respectively.

**SW** The salary and wages allocator represents the weighting of salary and wages (excluding Administrative and General) for production, transmission, distribution, and customer accounts.

**Depreciation Rate**
**Schedule 2**

Composite Depreciation Weighting for FY 2008

**Notes:**

**1** Listed in Schedule 2 are the allocation methods used to weight the depreciation rates for each jurisdiction to determine a composite depreciation rate for EMe as reflected in the FY 2008 Form 1. The methodology used in FY 2008 relied on allocation methods and values specific to Missouri and Kansas. The FERC allocations were determined consistently with the methods documented above in Schedule 1. Listed below is a description of the allocation for each jurisdiction:

**A** The 2008 allocation values for the Missouri jurisdiction were based on allocators calculated by the Missouri PSC (MPSC) staff in support of the Final Order in Missouri rate Case No. ER-2007-0291.

**B** The 2008 allocation values for the Kansas jurisdiction were based on the methods used by EMe to allocate related plant balances in Kansas rate case Docket No. 07-KCPE-905-RTS.

**C** The 2008 allocation values for the FERC jurisdiction were based on the applicable factors used by EMe to allocate related plant balances in Missouri rate Case No. ER-2007-0291. These account-specific methods are consistent with those documented in Schedule 1 above.

**2** The Allocation Basis codes in Schedule 2 have the same definitions as those in Schedule 1.

|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 44 | | - | - | - | | | - | - | | - | - | | - | - |
| 45 | **Notes:** | | | | | | | | | | | | | |
| 46 | (A) | Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 8) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2) | | | | | | | | | | | | |
| 47 | (B) | This rate will reflect any future FERC approved depreciation rates. | | | | | | | | | | | | |
| 48 | (C) | Balance Portfolio Projects that have been completed and whose costs are in the Form 1 should be entered on this page as well as any CWIP balance for those projects with CWIP incentive. If a project is completed in phases over multiple years, that project should be entered in sheet P-4 until the entire project is completed and reported in the Form 1. | | | | | | | | | | | | |
| 49 | (D) | Balance Portfolio Projects with incentives granted by FERC should be included in Sheet A-9 as well as this sheet. | | | | | | | | | | | | |
| 50 | (E) | Accumulated Depreciation will be brought forward from the prior year for each project. | | | | | | | | | | | | |

**Notes:**

None of the following expenses shall be recovered directly or indirectly through the formula rate:

**A.** Industry association dues (*e.g.*, EEI and EPRI).

**B.** The following charges to Account 930.2: nuclear power research expenses, miscellaneous general expenses related to Wolf Creek Nuclear Generating Station; Nuclear Energy Institute fees, assessments and other costs; and any other nuclear-related expenses.

**C.** Other experimental and general research expenditures (other than those related to transmission which shall be directly assigned to transmission).

**D.** Expenses to Maintain Corporate Visibility (except such costs related to regulatory, reporting, compliance, and shareholder communications).

**E.** Regulatory Commission expenses, other than FERC transmission-related dockets which shall be directly assigned to transmission. Transmission-related dockets shall not include transmission-related rulemakings or notices of inquiry proceedings, except those related to siting or reliability.

**Interest Calculation**

| | Short term Interest Rate (Notes A and F) | | Avg. Ann Short Term Int |
|---|---|---|---|
| 11 | Other Interest Exp.(Notes, p.117) | (Note A) | - |
| 12 | Notes Payable (Acct. 231-daily balances wksht.) | (Note A) | - |
| 13 | No. of Months | | 12 |
| 14 | Annual Short-term Int Rate | (line 11 / line 12 ) | 0.0000 % |

**FERC Quarterly Interest Rate**

| | | | |
|---|---|---|---|
| 15 | Qtr 3 (Previous Year) | | 0.0000 % |
| 16 | Qtr 4 (Previous Year) | | 0.0000 % |
| 17 | Qtr 1 (Current Year) | | 0.0000 % |
| 18 | Qtr 2 (Current Year) | | 0.0000 % |
| 19 | Average of the last 4 quarters | (Lines 15-18 / 4) | 0.0000 % |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 20 | Interest Rate Used for True-up adjustment (Note B) | 0.0000% | 0.0000 % | 0.0000% | 0.0000 % | 0.0000% | |

| | | BPF True-Up | Balance Portfolio True-up | ITP / Priority Project 1 True-up | ITP / Priority Project 2 True-up. | Zonal True-up | Total True-up |
|---|---|---|---|---|---|---|---|
| | | (1) | (2) | (3) | (4) | (5) | (6) |
| 21 | True-Up Amount (line 8c) (Note D) | $ - | $ - | $ - | $ - | $ - | $ - |
| 22 | Interest on True-up Amount ([Average Interest Rate / 12 months]*24 months] | - | - | - | - | - | - |
| 23 | **True-up Adjustment (Note E)** | **$ -** | **$ -** | **$ -** | **$ -** | **$ -** | **$ -** |

**Note:**

A The short term interest rate is based on a 12 month rate ending June of the year in which the Annual Update is prepared, with denominator calculated using daily balances and the numerator based on Form 3Q.

B Use the lower of line 14 and line 19 if the True-up Amount (line 21) is greater than or equal to zero. Use line 19 if the True-up amount (line 21) is less than zero.

C Enter the Projected Revenue Requirement for the Actual period without a true-up adjustment plus any adjustments, either positive or negative, resulting from corrections of prior years.

D If the annual update is for a partial year, not 12 months, then the amount on line 21 shall be prorated to represent the number of months in the partial year.

E If the annual update is for a partial year, monthly interest will be multiplied by 18 plus one-half of the months in the partial year.

F The numerator and denominator of the short-term interest rate calculation will reflect consistent debt components.

**NOTES**

A Beginning in 2009, included in page 256 notes of the FERC Form 1, the long term interest expense and preferred dividends and a 13-month average balance for long-term debt, preferred stock and common equity of Great Plains Energy will be provided. This information will be the reference for the capital structure and weighted cost of long term debt and preferred stock.

B (Hold future use)

C Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 2, line 7, col. 7.

D (Hold future use)

E (Hold future use)

F (Hold future use)

G (Hold future use)

H The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "percentage of federal income tax deductible for state income tax purposes". Furthermore, a utility that elected to utilize amortization of tax credits against taxable income rather than book tax credits to Account 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 2, line 21). When FIT or SIT statutory tax rate changes take effect on other than a calendar year basis, the statutory rates to be used in the formula rate template shall be weighted averages for the calendar year determined by weighting the statutory tax rates by the number days each such tax rate was in effect during the calendar year for which the costs are being determined. KCMO Earnings Tax is not included in the calculation of the Composite State Income Tax Rate.

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | 0.00% | Federal Income Tax Rate |
| | SIT= | 0.00% | Composite State Income Tax Rate or Composite SIT |
| | p = | 0.00% | Percentage of federal income tax deductible for state income tax purposes |

The Composite State Income Tax Rate reflects the effective rate for each tax jurisdiction:

| | Apportionment Factor | Rate | Effective Rate | % of FIT Deductible | Portion of Fed Tax Deductible = p |
|---|---|---|---|---|---|
| Missouri | 0.00% | 0.00% | 0.0000% | 0.00% | 0.0000% |
| Kansas | 0.00% | 0.00% | 0.00 | 0.00% | 0.0000% |

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | | 00% | | |
| | | | | 0.00 | | |
| | KS City | 0.00% | 0.00% | 00% | 0.00% | 0.0000% |
| | | | Composite State Income Tax Rate | 0.00 00% | | |
| | | | | Composite Portion of FIT Deduction for State Returns | | 0.0000% |

**ALLOCATION FACTORS**

| Line No. | Allocators | Description | Location of Calculation or First Use of Allocator |
|---|---|---|---|
| 1 | **TP** | Percentage of transmission plant included in rate base. | Page 3, line 5, col 6 |

**(B)** P-5 projects will be included in total projected transmission projects for P-1

## Evergy Metro Inc.
## Formula Rate Implementation Protocols

### I. Annual Update

1. The formula rate template contained in Attachment H of the Southwest Power Pool, Inc. ("SPP") Open Access Transmission Tariff ("OATT"), Federal Energy Regulatory Commission ("FERC") Electric Tariff, Sixth Revised Volume No. 1 ("Formula") and these Formula Rate Implementation Protocols ("Protocols") together comprise the Evergy Metro Inc. ("EMe") filed rate (collectively, the "Formula Rate") for transmission service under the SPP OATT or the EMe OATT as applicable. EMe will follow the instructions specified in the Formula Rate to calculate annually its Annual Transmission Revenue Requirements ("ATRR") for Network Integration Transmission Service, rates for Point-to-Point transmission service, its ATRR associated with transmission upgrade projects having cost recovery under Schedule 11 of the SPP OATT, and rates for Ancillary Services Schedule 1 - Scheduling System Control and Dispatch Services, for posting by EMe and SPP, as applicable.

2. The Formula Rate shall be applicable to service on and after January 1 of each calendar year through December 31 of the same calendar year ("Rate Year"), subject to review, challenge and refunds or surcharges with interest, as provided herein.

3. Each calendar year, EMe shall:

   (a) Calculate the ATRR by September 24 (or the next business day if September 24 is not a business day) for the next Rate Year in accordance with the Formula Rate ("Annual Update"). The Formula Rate specifies in detail the manner in which

      i. the most recent Form No. 1 data shall be used as inputs and the limited projections of transmission plant and associated

transmission depreciation expense, transmission O&M expense, A&G expense, revenue credits, and load will be forecast for the next Rate Year in the Annual Update; and

ii. any true-up calculated in accordance with the Formula Rate, including interest, ("True-Up Adjustment") for the prior Rate Year shall be incorporated into the Annual Update for the next Rate Year;

(b) Interest on any over-recovery or under-recovery of the net revenue requirements shall be calculated in accordance with the Formula true-up worksheet (Worksheet TU(True-Up)). Interest on an over-recovery or under-recovery of a revenue requirement shall be determined according to the Formula;

(c) Calculate the True-Up Adjustment for a given Rate Year and post it by June 1 (or the next business day if June 1 is not a business day) of the year following that Rate Year in accordance with the Formula Rate, which adjustment will be reflected in the next Annual Update. The True-Up Adjustment shall include a Formula template with the actual data for the prior Rate Year compared to the previously projected data for the same period;

(d) Calculate the ATRR values for transmission service for the next Rate Year which shall be the Annual Update for such Rate Year, plus or minus the True-up Adjustment from the previous Rate Year;

(e) Post such Annual Update (each September 24) and True-Up Adjustment (each June 1), as well as a populated Formula template in fully functional spreadsheets showing the calculation of such Annual Update and True-Up Adjustment with documentation supporting such calculation as provided in Section I.4, below, and, with respect to the Annual Update, information supporting the limited projections described in Section I.3.a.i., above, (which information shall include, but is not limited to, the following information for all transmission facilities included in the expected plant additions: (i) expected date of completion; (ii) percent completion status as of the date of the Annual Update; (iii) a one-line diagram of facilities exceeding $5 million in cost; (iv) the total installed cost of the facility; (v) the reason for the facility addition; and (vi) upgrade costs paid by a generator or paid by a transmission customer directly to EMe) in an accessible location on the SPP's website and OASIS (the date of such posting is referred to herein as the "Posting Date"). Any delay in the Posting Date will result in an equivalent extension of time for the submission of information requests discussed in Section II of these protocols;

(f) On the Posting Date, notify Interested Parties, on the SPP email exploder list titled "Service List", of the website address of the Annual Update and True-Up Adjustment postings. For purposes of these procedures, the term Interested Party includes, but is not limited to, customers under the OATT, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general ("Interested Parties"). Interested Parties can contact SPP to subscribe to the SPP Service List;

(g) Make a good faith effort to respond within ten (10) business days to reasonable information requests submitted by Interested Parties for information and work papers supporting the Annual Update. Any such information request must be submitted within sixty (60) days of the Posting Date of the Annual Update and shall be limited (as listed in Sections II.3(a) through (g)) to that which is appropriate to determine if EMe has properly calculated the Annual Update and whether the costs included in the Annual Update are appropriately recovered under the terms of the Formula Rate and the Formula Rate has been applied according to its terms; and

(h) Provide its Interested Parties, via e-mail based on the SPP Service List, at least thirty (30) days (all references herein to days shall be

calendar days unless specified otherwise) advance notice of a public meeting to be held no sooner than ten (10) days after the Posting Date of the Annual Update and no later than October 16 each year, to explain and answer questions regarding the Annual Update for the next calendar year ("Annual Update Customer Meeting"). EMe shall provide an option for Interested Parties to remotely access this Annual Update Customer Meeting (remote access options may include video conferencing, webinar, internet conferencing, or other appropriate remote access options as determined by EMe). EMe shall modify the Annual Update to reflect any changes that it and the participating transmission customers all agree upon by no later than November 20 and shall cause the revised Annual Update to be posted in the same manner as the original Annual Update.

4. The True-Up Adjustment for the prior Rate Year shall:

(a) Be based upon EMe's FERC Form No. 1 for that Rate Year, and, to the extent specified in the Formula Rate, upon the books and records of EMe (EMe's FERC Form No. 1, books, and records all to be maintained consistently with FERC's Uniform System of Accounts ("USoA") and FERC accounting policies and practices);

(b) Be calculated pro rata based on the months during the Rate Year when the ATRR was in effect by multiplying the Annual True-Up Adjustment by the number of months that the ATRR was in effect divided by 12;

(c) Include a variance analysis of, at minimum, actual revenue requirement components of rate base, operating and maintenance expenses, depreciation expense, taxes, return on rate base, and revenue credits as compared to the corresponding components in the projected revenue requirement that was calculated for the prior Rate Year with an explanation of material changes.

(d) As and to the extent specified in the Formula Rate, provide sufficiently detailed supporting documentation for data (and all adjustments thereto or allocations thereof) that are used to develop the actual ATRR for the applicable Rate Year and are not otherwise available directly from the FERC Form No. 1;

(e) Include an identification of (i) any changes in EMe accounting policies, practices, and procedures (including changes resulting from revisions to FERC's Uniform System of Accounts and/or Form No. 1 reporting requirements) from those in effect during the calendar year upon which the most recent ATRR was based and that, in EMe's reasonable judgment, could impact the Formula Rate or the calculations under the Formula Rate within the next three years; (ii) any changes in the SPP OATT from the provisions of the SPP OATT in effect during the calendar year upon which the most recent ATRR was based and that, in EMe's reasonable judgment, could impact the Formula Rate or the calculations under the Formula Rate within the next three years; and (iii) any change, and the dollar value of the change, in the classification of any transmission facility under Attachment AI of the SPP OATT (including the costs of any reclassified facility) that EMe has made in the applicable True-Up Adjustment or Annual Update; and

(f) Be subject to review and challenge in accordance with the procedures set forth in these Formula Rate Implementation Protocols.

5. A change to the Formula Rate inputs related to extraordinary property losses, return on equity, depreciation rates for each regulatory jurisdiction that are used to calculate the composite rates applied in the Formula Rate, or Post Employment Benefits Other than Pensions may not be made absent an appropriate Federal Power Act Section 205 or 206 filing with the FERC.

6. If EMe files any corrections or modifications to its FERC Form No. 1 prior to the Posting Date of its Annual Update and such corrections or

modifications would affect the True-Up Adjustment for a prior Rate Year, the True-Up Adjustment for each Rate Year(s) affected by the corrections or modifications shall be updated to reflect the corrected or modified FERC Form No. 1 and the Annual Update shall incorporate the change in such True-Up Adjustment(s), with interest. Corrections or modifications to a FERC Form No. 1 filed after the Posting Date of an Annual Update and not included in a revised Annual Update by November 20 shall be incorporated in the next True-Up Adjustment or Annual Update, as applicable. EMe shall report in a timely manner to the FERC, the applicable state commissions, and all parties required by FERC regulations any corrections or modifications to its FERC Form No. 1, that affect materially the past or present implementation of the Formula Rate, whether such corrections or modifications have the effect of increasing or decreasing the resulting transmission rates.

**II. Review Procedures for Annual Update and True-Up Adjustment**

Each Annual Update and True-Up Adjustment for the prior Rate Year shall be subject to the following review procedures ("Annual Review Procedures") (if any of the dates provided for herein fall on a Saturday, Sunday or Federal bank holiday, then the due date shall be the first business day thereafter):

1. Review procedures specific to the Annual Update are stated in Sections I.3(e) through (h).

2. Each year, EMe will, with at least thirty (30) days' notice utilizing the SPP Service List, convene a meeting of its Interested Parties, no sooner than ten (10) days after the Posting Date of the True-Up Adjustment and no later than July 8, at EMe's offices in Kansas City, Missouri, to discuss the True-Up Adjustment ("True-Up Customer Meeting"). EMe shall provide an option for Interested Parties to remotely access this True-Up Customer Meeting (remote access options may include video conferencing, webinar, internet conferencing, or other appropriate remote access options as determined by EMe).

3. Interested Parties may begin submitting information requests immediately following the Posting Date of the True-Up Adjustment and will have one-hundred five (105) days after June 1 to serve reasonable information requests on EMe for information and work papers supporting the True-Up Adjustment for the prior Rate Year. Such information and document requests shall be limited to what is necessary to determine:

   (a) the extent or effect of an Accounting Change;

   (b) whether the Annual True-Up or projected net revenue requirement fails to include data properly recorded in accordance with these Protocols;

   (c) the proper application of the formula rate and procedures in these Protocols;

   (d) the accuracy of data and consistency with the formula rate of the calculations shown in the Annual True-Up or projected net revenue requirement;

   (e) the prudence of actual costs and expenditures;

   (f) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or

   (g) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

Without limiting the generality of the foregoing, such information requests may include questions related to the data described in Sections I.4(a) and (c) and Section I.6 above.

4. EMe shall make a good faith effort to respond to information requests pertaining to a True-Up Adjustment within ten (10) business days of receipt of such requests. Information requests received after 4 p.m. Central Prevailing Time shall be considered received the next business day.

5. To the extent EMe and any Interested Party(ies) are unable to resolve disputes related to information requests for the Annual Update or True-up Adjustment submitted in accordance with these Formula Rate Implementation Protocols, EMe or any Interested Party may petition the FERC to appoint an Administrative Law Judge as a discovery master. The discovery master shall have the power to issue binding orders to resolve discovery disputes and compel the production of discovery, as appropriate, in accordance with the Formula Rate Implementation Protocols and consistent with the FERC's discovery rules.

6. Any Interested Party shall have until the later of one-hundred fifty (150) days after June 1 or thirty (30) days after EMe's last response to reasonable information requests submitted pursuant to Section II.3 above to notify EMe in writing of any specific challenges to the True-Up Adjustment ("Informal Challenges"). Any Interested Party shall have until the later of November 24 or thirty (30) days after EMe's last response to reasonable information requests submitted pursuant to Section II.3 above to notify EMe in writing of any specific challenges to the Annual Update ("Informal Challenges"). Challenges to the Formula Rate itself shall not be considered Informal Challenges for purposes of these Annual Review Procedures.

**III. Resolution of Challenges**

1. If EMe and any Interested Party(ies) have not resolved all Informal Challenges identified pursuant to Section II.6 above within sixty (60) days after the deadline in Section II.6 for written notification of Issues, senior management of the Interested Party(ies) and EMe shall make a good faith effort to resolve any outstanding Informal Challenges ("Senior Management Review").

2. (a) If EMe's and any Interested Party's(ies') senior management are unable to resolve all Informal Challenges within thirty (30) days after the Senior Management Review commences, the Interested Party(ies) may file a challenge to the Annual Update or True-Up Adjustment ("Formal Challenge"). Challenges to the Formula Rate itself shall not be considered "Formal Challenges" for purposes of these Annual Review Procedures.

    i. Deadline for Formal Challenge notice is the later of thirty (30) days after Senior Management Review or March 1.

    ii. Any Interested Party may notify EMe in writing of a Formal Challenge to the Annual Update or True-Up Adjustment.

    (b) All information produced pursuant to these Protocols may be included in any Formal Challenge, in any other proceeding concerning the Formula Rate initiated at FERC pursuant to the Federal Power Act, or in any proceeding before the U.S. Court of Appeals to review a FERC decision involving the Formula Rate. EMe may, however, designate any response to an information request as confidential if the information conveyed is not publicly available. Interested Parties' representatives shall treat such response as

confidential in connection with any of the proceedings discussed in this section; provided, however, that when so used, such response shall initially be filed under seal (unless the claim of confidentiality is waived by EMe), subject to a later determination by the presiding authority that the material is, in whole or in part, not entitled to confidential treatment.

(c) The Informal as well as Formal Challenges shall be limited (as listed in Sections II.3(a) through (g)) to that which is appropriate to determine if EMe has properly calculated the Annual Update or True-Up and whether the costs included in the Annual Update or True-Up are appropriately recovered under the terms of the Formula Rate and the Formula Rate has been applied according to its terms.

(d) The notification for the Informal and Formal Challenges should contain sufficient information to present the issue in question, as well as sufficient contact information.

i. The written notification should be addressed to:

Regulatory Affairs –Transmission
Evergy Metro Inc.
P.O. Box 418679
Kansas City, MO 64141-9679

ii. E-mail notifications can be made to:

Regulatory.affairs@evergy.com

(e ) Notification for Formal Challenges can also be made as provided in Section IV.

3. In any proceeding ordered by the FERC in response to a Formal Challenge, EMe will bear the burden of proof in accordance with applicable FERC precedent as it may be modified by the FERC.

4. Any refunds or surcharges resulting from an Informal Challenge or Formal Challenge not resolved by November 20 shall be calculated, with interest, from the effective date of the challenged True-Up Adjustment, and shall be reflected in the True-Up Adjustment and Annual Update for the next Rate Year.

5. In the event that EMe identifies an error in an Annual Update or True-Up Adjustment (or a FERC Form No. 1 or successor form which is used as an input to the Formula Rate), or is required by applicable law or a court or regulatory body to correct an error, EMe shall correct such error in good faith and without regard to whether the correction increases or decreases EMe's revenue requirements. There will be no mid-year rate adjustments. Any such correction will be implemented in the True-Up Adjustment and Annual Update for the next Rate Year, with interest. Nothing in these Protocols should or may be construed as preventing an Interested Party or the FERC from contesting such correction.

**IV. Informational Filing**

1. By March 15 of each year, EMe shall submit to FERC an informational filing ("Informational Filing") of its projected net revenue requirement for the Rate Year, including its Annual Update and True-Up Adjustment. If March 15 falls on a holiday or weekend day, the filing will be made the next business day. This Informational Filing must include the information that is reasonably necessary to determine: (1) that input data under the formula rate are properly recorded in any underlying workpapers; (2) that EMe has properly applied the formula rate and these procedures; (3) the accuracy of data and the consistency with the formula rate of the Transmission Revenue Requirement and rates under review; (4) the extent of accounting changes that affect formula rate inputs; and (5) the reasonableness of projected costs. The Informational Filing must also describe any corrections or adjustments made during that period, and must describe all aspects of the formula rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. Within five (5) days of such Informational Filing, EMe shall provide notice of the Informational Filing via an email exploder list and by posting the docket number assigned to EMe's Informational Filing on the SPP website and OASIS.

2. Any challenges to the implementation of the Attachment H-EMe Formula Rate must be made through the challenge procedures described in Section III of these Protocols or in a separate complaint proceeding. For any known challenges still working through the challenge procedures and not known to be a Formal Challenge by the March 15 Informational Filing, Interested Parties can also file protests or comments to EMe's annual Informational Filing.

**V. Joint Meeting with Transmission Owners**

Each year EMe shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members, and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

**VI. Miscellaneous**

1. Nothing in these Protocols limits or deprives EMe, the FERC or any Interested Party of any rights it may otherwise have under any applicable provision of the Federal Power Act. The provisions of these Protocols addressing review and challenge of the Annual Update or True-Up Adjustment are not intended to nor shall be construed as limiting EMe's, FERC's or any party's rights under any applicable provision of the Federal Power Act.

2. Notwithstanding the provisions of Section VI.1, before EMe or any Interested Party may bring any new action at the FERC involving the Formula Rate, senior management of such Interested Party(ies) and EMe shall make a good faith effort to resolve any outstanding issues. If EMe's and any Interested Party's(ies') senior management are unable to resolve all issues within thirty (30) days, then EMe or the Interested Party(ies) may bring such action. For the avoidance of doubt, the advance notice and negotiation requirement in this Section VI.2 shall not apply to Formal Challenges (as to which the Senior Management Review provisions in Section III apply) nor shall the requirement bar an Interested Party from intervening in, filing a protest under FPA § 206 in, or fully participating in any proceeding initiated by the FERC *sua sponte* or otherwise properly initiated before the FERC.

# Addendum 11 to Attachment H – Part 1A

Evergy Missouri West Inc. (EMW)

Rate Formula Template

Table of Contents

Overview
The formula is calculated in two steps. The first step is to fill out Tabs A-1 thru A-11, and the Actual Gross Rev Req tab with data from the previous year's Form 1. This data input results in the calculation of the actual annual transmission revenue requirement (Actual ATRR) for the previous year, as shown in the Actual Net Rev Req tab. The results of this calculation are presented to the customers for review no later than June 1 each year.

The TU (True-up) tab uses the Actual ATRR from the Actual Net Rev Req tab and compares it to the Projected ATRR (without the True-up for a prior year) that customers were billed for the same period. Interest is added to the difference and the adjusted true-up then is included in the Projected Net Rev Req tab.

The projected O&M and plant balances are calculated in Tabs P-1 thru P-5. These sheets feed into the Projected Gross Rev Req tab and ultimately into the Projected Net Rev Req tab. The RTO Projects Smry tab retrieves project specific data from other tabs to calculate the amount of revenue requirements associated with those projects which are contained in the total Projected Gross Revenue Requirement amount. The Spon Projects Smry tab does the same process for Sponsored projects. The total revenue requirements for these two groups of upgrades and revenue credits are subtracted from the EMW total revenue requirement to obtain the Zonal ATRR (line 20, before true-up). This calculation is shown on the Projected Net Rev Req tab. This tab also calculates the point-to-point zonal rates. SPP rates are set on the trued up Base Plan Net Revenue Requirements, Balanced Portfolio Net Revenue Requirements, and ITP/Priority Projects Net Revenue Requirements as well as the trued up Zonal Net Revenue Requirements. The specific charges are defined under the SPP Open Access Transmission Tariff.

Cells highlighted in yellow are data input cells. Some cells may reference the results from other calculations in the formula. Such cell references may change from year to year, requiring manual adjustment of the reference or the direct entry of the proper value.

| **Filed Page** | Tab | Description |

Rate Formula Template
Utilizing FERC Form 1 Data
Actual Gross Revenue Requirements
For the 12 months ended - December 31, 20XX

Evergy Missouri West Inc.

Actual Gross Rev

General Note: References to pages in this formula rate are indicated as:
(page#, line#, col.#).
References to data from FERC Form 1 are indicated as:
page#.line#.col

| Note Letter | |
|---|---|
| **A** | Reserved for future use. |
| **B** | Includes only Transmission plant. |
| **C** | Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 2, line 7, col. 7. |
| **D** | Prepayments are the electric related prepayments booked to Account No. 165 and reported on FERC Form 1, p. 111, ln. 57.c. Expenses recorded in Account 565, Transmission of Electricity by Others, are not recoverable through the formula rate. |
| **E** | Lease and joint facilities charges included on line 6, page 2 of 5, are those costs attributable to transmission facilities. |
| **F** | Transmission O&M on this line does not include any SPP charges for Schedule 1-A of the SPP OATT. |
| **G** | Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template. |
| **H** | The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "percentage of federal income tax deductible for state income tax purposes". Furthermore, a utility that elected to utilize amortization of tax credits against taxable income rather than book tax credits to Account 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 2, line 21). When FIT or SIT statutory tax rate changes take effect on other than a calendar year basis, the statutory rates to be used in the formula rate template shall be weighted averages for the calendar year determined by weighting the statutory tax rates by the number days each such tax rate was in effect during the calendar year for which the costs are being determined. KCMO Earnings Tax is not included in the calculation of the Composite State Income Tax Rate. |

| Inputs Required: | | | |
|---|---|---|---|
| | FIT = | 0.00% | Federal Income Tax Rate |
| | SIT= | 0.00% | Composite State Income Tax Rate or Composite SIT |
| | p = | 0.00% | Percentage of federal income tax deductible for state income tax purposes |

The Composite State Income Tax Rate reflects the effective rate for each tax jurisdiction, as well as the Composite Portion of FIT Deduction in State Returns:

| | Apportionment Factor | Rate | Effective Rate | % of FIT Deductible | Portion of Fed Tax Deductible = p |
|---|---|---|---|---|---|
| Missouri | 0.00% | 0.00% | 0.0000% | 0.00% | 0.000 0% |
| Kansas | 0.00% | 0.00% | 0.0000% | 0.00% | 0.000 0% |
| KS City | 0.00% | 0.00% | 0.0000% | 0.00% | 0.000 0% |
| Composite State Income Tax Rate | | | 0.0000% | | |
| Composite Portion of FIT Deduction for State Returns | | | | | 0.000 0% |

I Removes transmission plant determined by Commission order to be excluded from RTO transmission rate base under Docket No. EL08-89-000 (to the extent FERC Form 1 balances are not adjusted).

J Unless otherwise specified, OATT refers to the EMW and SPP OATTs.

K Removes generator step-up facilities determined by Commission order to be excluded from RTO transmission rate base under Docket No. EL08-89-000 (to the extent FERC Form 1 balances are not adjusted).

L Reserved for future use.

M If the transmission related component of property tax is specifically identified in Form 1, then a TP allocator shall be used. Property tax shall be allocated to transmission by the GP allocator if transmission related property tax is not specifically identified in the Form 1.

N Beginning in 2009, included in page 256 notes of the FERC Form 1, the long term interest expense and preferred dividends and a 13-month average balance for long-term debt, preferred stock and common equity of Great Plains Energy will be provided. This information will be the reference for the capital structure and weighted cost of long term debt and preferred stock.

O The Noncontrolling Interest represents a third party's 50% investment in one of GPE's consolidated subsidiaries reported on the consolidated balance sheet's equity section separate from the parent's equity, as required by generally accepted accounting principles effective January 1, 2009.

P The approved ROE is 11.1%. No change in ROE may be made absent a filing with FERC. Any incentive ROEs approved by the Commission are shown by project in Worksheet A-9.

Q The current depreciation rates used to calculate depreciation expense and accumulated depreciation balances are shown in worksheet A-5.

| | | |
|---|---|---|
| **R** | The Post-Employment Benefits Other than Pensions (PBOP) expense projected for FY 2010 set forth below will be used in lieu of the actual PBOP in 2009 and subsequent years absent a filing with FERC that alters the amount. | |
| | Post-Employment Benefits Other than Pensions | $4,775, 222 |
| **S** | The Unamortized Abandoned Transmission Plant can only be included in rate base if authorized by the Commission. | |
| **T** | CWIP balances only included as authorized by the Commission. Regulatory liability offsets AFUDC accrual where CWIP is not included in state-regulated rate base. | |
| ***U*** | *Includes the amortization of any excess/deficient income taxes resulting from changes to income tax rates (including changes in apportionment) and other actions take by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/1-T).* | |
| ***V*** | Reserved for future use. | |

**ALLOCATION FACTORS**

| Line No. | Allocators | Description | Location of Calculation or First Use of Allocator |
|---|---|---|---|
| 1 | **TP** | Percentage of transmission plant included in rate base. | Page 3, line 5, col 6 |
| 2 | **W/S** | Percentage of transmission labor included in rates | Page 4, line 5a, col 7 |
| 3 | **DA** | Direct assignment | First used on page 1, line 2, col 6 |
| 4 | **GP** | Ratio of allocated transmission, general, & intangible plant to total gross plant. | Page 3, line 11, col 6 |
| 5 | **NA** | Not applicable for the transmission formula rate. | First used on page 2, line 16, col 6 |
| 6 | **NP** | Ratio of net transmission, general, & intangible plant to total net plant. | Page 3, line 23, col 6 |

Notes:

Column (**n**) :This column reflects the relationship of the actual load for each month (September, October, November and December) as a percentage of the average transmission network load for January through August. For example, the September percentage in column **(n)** is equal to the September load in column (**l**) divided by the 8-month average of column (**m**) shown on line 13.

**1** ADIT items in each account will be in the same order as the prior year with any new line items, relative to the prior year, to be highlighted and added at the end of the list of items for each account. A line item maybe deleted when the amount for the line item has been zero through one complete rate cycle.

**2** ADIT impacts related to Contributions in Aid of Construction (CIAC) shall be designated as non-transmission related unless both of the following conditions apply: a) the facility for which the CIAC is paid is a Transmission Facility pursuant to Attachment AI of the SPP Open Access Transmission Tariff, and b) the FERC-approved tariffs or rate schedules under which the payment is made do not provide for full recovery by EMWof the ADIT impacts. More generally, ADIT items that are to be treated as 100% Non-Transmission should be so treated on the basis of the actual tax item, not based on the title used.

*Note*

*A* *Each EDIT item is categorized into 1 of 5 categories. The selected category will will determine the Allocator applied to the EDIT balance.*

*1) NonTrans: The EDIT balance is 100% unrelated to the Transmission of electricity and the NA Allocator is applied.*

*2) Retail: The EDIT balance is 100% related to retail operations and the NA Allocator is applied.*

*3) Trans: The EDIT balance is 100% related to transmission operations and the DA Allocator is applied.*

*4) Plant: The EDIT balance is related to Property, Plant, & Equipment "PP&E" and the GP Allocator is applied.*

*5) Labor: The EDIT balance is labor related and the W/S Allocator is applied.*

*B* *Includes the impact of tax rate changes enacted during the period and adjustments to prior year activity.*

*C EDIT balances exclude income tax gross-ups recorded to accounts 182.3 and 254*

**Notes:**

**1** The SJLP depreciation rates will be applied to the SJLP facilities and the MPS depreciation rates will be applied to the MPS facilities. The ECORP (joint MPS and SJLP) rates differ from the MPS and SJLP rates for some accounts, where approved. The EMW FERC Form No. 1 will identify the depreciable balances for MPS, SJLP, and ECORP separately on pages 337.x or in the notes to pages 337.x. The composite depreciation rate in each account reflects an asset-based weighting of the rates among MPS, SJLP, and ECORP.

**2** The amortization rate for MPS Account 301 is recalculated each year based on a fixed end of life of FY2023, starting in FY2009.

**3** The amortization rate for MPS Account 30301 is recalculated each year based on a fixed end of life of FY2061.

**4** Account 30302 contains computer software. The amortization rate will be set at 20% effective July 2010. Due to the corporate transition, the rates applied in 2008 and 2009 were 12.5% and 11.11%, respectively.

**5** The MPS and SJLP amortization rates for this account are recalculated each year based on the remaining useful lives and relative balances of the retirement obligations of General Plant facilities.

**6** The above account numbers reflect account numbering as shown in the 2009 FN1. Some accounts were renumbered between 2008 and 2009 in order to make the EMW numbers more consistent with the EMe system. The following table reflects the numbering changes between the 2008 and 2009 FN1s:

| 2008 | 2009 |
|---|---|
| 303.2 | 303 |
| 303.1 | 30301 |
| 303 | 30302 |
| 350 | 35004 |

| | |
|---|---|
| 391.1 | 391 |
| 391.11 | 39106 |
| 391.3 | 39102 |
| 391.4 | 39104 |
| 399.1 | 39901 |

46 Notes: (A) Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 8) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2)

47 (B) This rate will reflect any future FERC approved depreciation rates.

48 (C) BPF projects that have been completed and whose costs are in the Form 1 should be entered on this page as well as any CWIP balance for those projects with CWIP incentive. If a project is completed in phases over multiple years, that project should be entered in sheet P-4 until the entire project is completed and reported in the Form 1.

49 (D) BPF projects with incentives granted by FERC should be included in Sheet A-9 as well as this sheet.

50 (E) Accumulated Depreciation will be brought forward from the prior year for each project.

| 45 | | | | | | | | | | | | |

Notes:

46 (A) Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 8) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2)

47 (B) This rate will reflect any future FERC approved depreciation rates.

(C) BPF projects that have been completed and whose costs are in the Form 1 should be entered on this page as well as any CWIP balance for those projects with CWIP incentive. If a project is completed in phases over multiple years, that project should be entered in sheet P-4 until the entire
48 project is completed and reported in the Form 1.
Balance Portfolio Projects with incentives granted by FERC should be
49 (D) included in Sheet A-9 as well as this sheet.
Accumulated Depreciation will be brought forward from the
50 (E) prior year for each project.

**Notes:**

46

47 **(A)** Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 8) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2)

48 **(B)** This rate will reflect any future FERC approved depreciation rates.

49 **(C)** Sponsored Upgrade Projects that have been completed and whose costs are in the Form 1 should be entered on this page as well as any CWIP balance for those projects with CWIP incentive. If a project is completed in phases over multiple years, that project should be entered in sheet P-4 until the entire project is completed and reported in the Form 1.

50 **(D)** Sponsored Projects with incentives granted by FERC should be included in Sheet A-9 as well as this sheet.

51 **(E)** Accumulated Depreciation will be brought forward from the prior year for each project.

**Notes:**

None of the following expenses shall be recovered directly or indirectly through the formula rate:

**A.** Industry association dues (*e.g.*, EEI and EPRI).

**B.** The following charges to Account 930.2: nuclear power research expenses, miscellaneous general expenses related to Wolf Creek Nuclear Generating Station; Nuclear Energy Institute fees, assessments and other costs; and any other nuclear-related expenses.

**C.** Other experimental and general research expenditures (other than those related to transmission which shall be directly assigned to transmission).

**D.** Expenses to Maintain Corporate Visibility (except such costs related to regulatory, reporting, compliance, and shareholder communications).

**E.** Regulatory Commission expenses, other than FERC transmission-related dockets which shall be directly assigned to transmission. Transmission-related dockets shall not include transmission-related rulemakings or notices of inquiry proceedings, except those related to siting or reliability.

| 10 | Sept | Year 2 | EMW populates the formula rate using projected costs for Year 3, including true-up adjustment for Year 1 |

**Interest Calculation**

| | Short term Interest Rate (Notes A and F) | | Avg. Ann Short Term Int |
|---|---|---|---|
| 11 | Other Interest Exp.(Notes, p.117) | (Note A) | - |
| 12 | Notes Payable (Acct. 231-daily balances wksht.) | (Note A) | - |
| 13 | No. of Months | | - |
| 14 | Annual Short-term Int Rate | (line 11 / line 12 ) | 0.0000 % |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | **FERC Quarterly Interest Rate** | | | | | | | |
| 15 | Qtr 3 (Previous Year) | | | 0.0000 % | | | | |
| 16 | Qtr 4 (Previous Year) | | | 0.0000 % | | | | |
| 17 | Qtr 1 (Current Year) | | | 0.0000 % | | | | |
| 18 | Qtr 2 (Current Year) | | | 0.0000 % | | | | |
| 19 | Average of the last 4 quarters | (Lines 15-18 / 4) | | 0.0000 % | | | | |
| 20 | Interest Rate Used for True-up adjustment (Note B) | | 0.0000 % | 0.0000 % | 0.0000 % | 0.0000 % | 0.0000% | |

| | | **BPF True-Up** | **Balance Portfolio Rev Req** | **ITP / Priority Project 1 Rev Req.** | **ITP / Priority Project 2 Rev Req.** | **Zonal Rev Req** | **Total True-up** |
|---|---|---|---|---|---|---|---|
| | | **(1)** | **(2)** | **(3)** | **(4)** | **(5)** | **(6)** |
| 21 | True-Up Amount (line 8c) (Note D) | $ - | $ - | $ - | $ - | $ - | $ - |
| 22 | Interest on True-up Amount ([Average Interest Rate / 12 months]*24 months] | - | - | - | - | - | - |
| 23 | **True-up Adjustment (Note E)** | **$ -** | **$ -** | **$ -** | **$ -** | **$ -** | **$ -** |

**Note:**

A The short term interest rate is based on a 12 month rate ending June of the year in which the Annual Update is prepared, with denominator calculated using daily balances and the numerator based on Form 3Q.

B Use the lower of line 14 and line 19 if the True-up Amount (line 21) is greater than or equal to zero. Use line 19 if the True-up amount (line 21) is less than zero.

C Enter the Projected Revenue Requirement for the Actual period without a true-up adjustment plus any adjustments, either positive or negative, resulting from corrections of prior years.

D If the annual update is for a partial year, not 12 months, then the amount on line 21 shall be prorated to represent the number of months in the partial year.

E If the annual update is for a partial year, monthly interest will be multiplied by 18 plus one-half of the months in the partial year.

F The numerator and denominator of the short-term interest rate calculation will reflect consistent debt components.

**RTO Project Summary - Summary of RTO Directed Projects**

**Evergy Missouri West Inc.**

**Revenue Requirement of SPP Projects included in KCP&L-EMW's Projected Revenue Requirements (NoteD):**

Evergy Missouri West Inc.

**NOTES**

A Beginning in 2009, included in page 256 notes of the FERC Form 1, the long term interest expense and preferred dividends and a 13-month average balance for long-term debt, preferred stock and common equity of Great Plains Energy will be provided. This information will be the reference for the capital structure and weighted cost of long term debt and preferred stock.

B (Hold future use)

Cash Working Capital assigned to transmission is one-eighth of

C O&M allocated to transmission at page 2, line 7, col. 7.

D (Hold future use)

E (Hold future use)

F (Hold future use)

G (Hold future use)

H The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "percentage of federal income tax deductible for state income tax purposes". Furthermore, a utility that elected to utilize amortization of tax credits against taxable income rather than book tax credits to Account 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 2, line 21). When FIT or SIT statutory tax rate changes take effect on other than a calendar year basis, the statutory rates to be used in the formula rate template shall be weighted averages for the calendar year determined by weighting the statutory tax rates by the number days each such tax rate was in effect during the calendar year for which the costs are being determined. KCMO Earnings Tax is not included in the calculation of the Composite State Income Tax Rate.

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | 0.00% | Federal Income Tax Rate |
| | SIT= | 0.00% | Composite State Income Tax Rate or Composite SIT |
| | p = | 0.00% | Percentage of federal income tax deductible for state income tax purposes |

The Composite State Income Tax Rate reflects the effective rate for each tax jurisdiction, as well as the Composite Portion of FIT Deduction in State Returns:

| | % of FIT | Portion of Fed Tax |
|---|---|---|

| | Apportionment Factor | Rate | Effective Rate | Deductible | Deductible = p |
|---|---|---|---|---|---|
| Missouri | 0.00% | 0.00% | 0.0000% | 0.00% | 0.0000% |
| Kansas | 0.00% | 0.00% | 0.0000% | 0.00% | 0.0000% |
| KS City | 0.00% | 0.00% | 0.0000% | 0.00% | 0.0000% |
| | Composite State Income Tax Rate | | 0.0000% | | |
| | Composite Portion of FIT Deduction for State Returns | | | | 0.0000% |

Notes: **(A)** Project Incentives as provided by Commission approval.

**(B)** Actual transmission depreciation expense (Actual Gross Rev Req, page 2, line 8) divided by actual transmission plant in service (Actual Gross Rev Req, page 1, line 2) divided by 12 months.

**( C )** Projected transmission plant will include those projects in P-4 and P-5, as well as other transmission projects.

**(B)** P-5 projects will be included in total projected transmission projects for P-1

**Evergy Missouri West Inc.**
**Formula Rate Implementation Protocols**

## I. Annual Update

1. The formula rate template contained in Attachment H of the Southwest Power Pool, Inc. ("SPP") Open Access Transmission Tariff ("OATT"), Federal Energy Regulatory Commission ("FERC") Electric Tariff, Sixth Revised Volume No. 1 ("Formula") and these Formula Rate Implementation Protocols ("Protocols") together comprise the Evergy Missouri West Inc. ("EMW") filed rate (collectively, the "Formula Rate") for transmission service under the SPP OATT or the EMW OATT as applicable. EMW will follow the instructions specified in the Formula Rate to calculate annually its Annual Transmission Revenue Requirements ("ATRR") for Network Integration Transmission Service, rates for Point-to-Point transmission service, its ATRR associated with transmission upgrade projects having cost recovery under Schedule 11 of the SPP OATT, and rates for Ancillary Services Schedule 1 - Scheduling System Control and Dispatch Services, for posting by EMW and SPP, as applicable.

2. The Formula Rate shall be applicable to service on and after January 1 of each calendar year through December 31 of the same calendar year ("Rate Year"), subject to review, challenge and refunds or surcharges with interest, as provided herein.

3. Each calendar year, EMW shall:

   (a) Calculate the ATRR by September 24 (or the next business day if September 24 is not a business day) for the next Rate Year in accordance with the Formula Rate ("Annual Update"). The Formula Rate specifies in detail the manner in which

      i. the most recent Form No. 1 data shall be used as inputs and the limited projections of transmission plant and associated transmission depreciation expense, transmission O&M expense, A&G expense, revenue credits, and load will be forecast for the next Rate Year in the Annual Update; and

      ii. any true-up calculated in accordance with the Formula Rate, including interest, ("True-Up Adjustment") for the prior Rate Year shall be incorporated into the Annual Update for the next Rate Year;

   (b) Interest on any over-recovery or under-recovery of the net revenue requirements shall be calculated in accordance with the Formula true-up worksheet (Worksheet TU(True-Up)). Interest on an over-recovery or under-recovery of a revenue requirement shall be determined according to the Formula;

(c) Calculate the True-Up Adjustment for a given Rate Year and post it by June 1 (or the next business day if June 1 is not a business day) of the year following that Rate Year in accordance with the Formula Rate, which adjustment will be reflected in the next Annual Update. The True-Up Adjustment shall include a Formula template with the actual data for the prior Rate Year compared to the previously projected data for the same period;

(d) Calculate the ATRR values for transmission service for the next Rate Year which shall be the Annual Update for such Rate Year, plus or minus the True-up Adjustment from the previous Rate Year;

(e) Post such Annual Update (each September 24) and True-Up Adjustment (each June 1), as well as a populated Formula template in fully functional spreadsheets showing the calculation of such Annual Update and True-Up Adjustment with documentation supporting such calculation as provided in Section I.4, below, and, with respect to the Annual Update, information supporting the limited projections described in Section I.3.a.i., above, (which information shall include, but is not limited to, the following information for all transmission facilities included in the expected plant additions: (i) expected date of completion; (ii) percent completion status as of the date of the Annual Update; (iii) a one-line diagram of facilities exceeding $5 million in cost; (iv) the total installed cost of the facility; (v) the reason for the facility addition; and (vi) upgrade costs paid by a generator or paid by a transmission customer directly to EMW) in an accessible location on the SPP's website and OASIS (the date of such posting is referred to herein as the "Posting Date"). Any delay in the Posting Date will result in an equivalent extension of time for the submission of information requests discussed in Section II of these protocols;

(f) On the Posting Date, notify Interested Parties, on the SPP email exploder list titled "Service List", of the website address of the Annual Update and True-Up Adjustment postings. For purposes of these procedures, the term Interested Party includes, but is not limited to, customers under the OATT, state utility regulatory commissions, consumer advocacy agencies, and state attorneys general ("Interested Parties"). Interested Parties can contact SPP to subscribe to the SPP Service List;

(g) Make a good faith effort to respond within ten (10) business days to reasonable information requests submitted by Interested Parties for information and work papers supporting the Annual Update. Any such information request must be submitted within sixty (60) days of the Posting Date of the Annual Update and shall be limited (as listed in Sections II.3(a) through (g)) to that which is appropriate to determine if EMW has properly calculated the Annual Update and whether the costs included in the Annual Update are appropriately recovered under the terms of the Formula Rate and the Formula Rate has been applied according to its terms; and

(h) Provide its Interested Parties, via e-mail based on the SPP Service List, at least thirty (30) days (all references herein to days shall be calendar days unless specified otherwise) advance notice of a public meeting to be held no sooner than ten (10) days after the Posting Date of the Annual Update and no later than October 16 each year, to explain and answer questions regarding the Annual Update for the next calendar year ("Annual Update Customer Meeting"). EMW shall provide an option for Interested Parties to remotely access this Annual Update Customer Meeting (remote access options may include video conferencing, webinar, internet conferencing, or other appropriate remote access options as determined by EMW). EMW shall modify the Annual Update to reflect any changes that it and the participating transmission customers all agree upon by no later than November 20 and shall cause the revised Annual Update to be posted in the same manner as the original Annual Update.

4. The True-Up Adjustment for the prior Rate Year shall:

(a) Be based upon EMW's FERC Form No. 1 for that Rate Year, and, to the extent specified in the Formula Rate, upon the books and records of EMW (EMW's FERC Form No. 1, books, and records all to be maintained consistently with FERC's Uniform System of Accounts ("USoA") and FERC accounting policies and practices);

(b) Be calculated pro rata based on the months during the Rate Year when the ATRR was in effect by multiplying the Annual True-Up Adjustment by the number of months that the ATRR was in effect divided by 12;

(c) Include a variance analysis of, at minimum, actual revenue requirement components of rate base, operating and maintenance expenses, depreciation expense, taxes, return on rate base, and revenue credits as compared to the corresponding components in the projected revenue requirement that was calculated for the prior Rate Year with an explanation of material changes.

(d) As and to the extent specified in the Formula Rate, provide sufficiently detailed supporting documentation for data (and all adjustments thereto or allocations thereof) that are used to develop the actual ATRR for the applicable Rate Year and are not otherwise available directly from the FERC Form No. 1;

(e) Include an identification of (i) any changes in EMW accounting policies, practices, and procedures (including changes resulting from revisions to FERC's Uniform System of Accounts and/or Form No. 1 reporting requirements) from those in effect during the calendar year upon which the most recent ATRR was based and that, in EMW's reasonable judgment, could impact the Formula Rate or the calculations under the Formula Rate within the next three years; (ii) any changes in the SPP OATT from the provisions of the SPP OATT in effect during the calendar year upon which the most recent ATRR was based and that, in EMW's reasonable judgment, could impact the Formula Rate or the calculations under the Formula Rate within the next three years; and (iii) any change, and the dollar value of the change, in the classification of any transmission facility under Attachment AI of the SPP OATT (including the costs of any reclassified facility) that EMW has made in the applicable True-Up Adjustment or Annual Update; and

(f) Be subject to review and challenge in accordance with the procedures set forth in these Formula Rate Implementation Protocols.

5. A change to the Formula Rate inputs related to extraordinary property losses, return on equity, depreciation rates for each regulatory jurisdiction that are used to calculate the composite rates applied in the Formula Rate, or Post Employment Benefits Other than Pensions may not be made absent an appropriate Federal Power Act Section 205 or 206 filing with the FERC.

6. If EMW files any corrections or modifications to its FERC Form No. 1 prior to the Posting Date of its Annual Update and such corrections or modifications would affect the True-Up Adjustment for a prior Rate Year, the True-Up Adjustment for each Rate Year(s) affected by the corrections or modifications shall be updated to reflect the corrected or modified FERC Form No. 1 and the Annual Update shall incorporate the change in such True-Up Adjustment(s), with interest. Corrections or modifications to a FERC Form No. 1 filed after the Posting Date of an Annual Update and not included in a revised Annual Update by November 20 shall be incorporated in the next True-Up Adjustment or Annual Update, as applicable. EMW shall report in a timely manner to the FERC, the applicable state commissions, and all parties required by FERC regulations any corrections or modifications to its FERC Form No. 1, that affect materially the past or present implementation of the Formula Rate, whether such corrections or modifications have the effect of increasing or decreasing the resulting transmission rates.

**II. Review Procedures for Annual Update and True-Up Adjustment**

Each Annual Update and True-Up Adjustment for the prior Rate Year shall be subject to the following review procedures ("Annual Review Procedures") (if any of the dates provided for herein fall on a Saturday, Sunday or Federal bank holiday, then the due date shall be the first business day thereafter):

1. Review procedures specific to the Annual Update are stated in Sections I.3(e) through (h).

2. Each year, EMW will, with at least thirty (30) days' notice utilizing the SPP Service List, convene a meeting of its Interested Parties, no sooner than ten (10) days after the Posting Date of the True-Up Adjustment and no later than July 8, at EMW's offices in Kansas City, Missouri, to discuss the True-Up Adjustment ("True-Up Customer Meeting"). EMW shall provide an option for Interested Parties to remotely access this True-Up Customer Meeting (remote access options may include video conferencing, webinar, internet conferencing, or other appropriate remote access options as determined by EMW).

3. Interested Parties may begin submitting information requests immediately following the Posting Date of the True-Up Adjustment and will have one-hundred five (105) days after June 1 to serve reasonable information requests on EMW for information and work papers supporting the True-Up Adjustment for the prior Rate Year. Such information and document requests shall be limited to what is necessary to determine:

   (a) the extent or effect of an Accounting Change;

   (b) whether the Annual True-Up or projected net revenue requirement fails to include data properly recorded in accordance with these Protocols;

   (c) the proper application of the formula rate and procedures in these Protocols;

   (d) the accuracy of data and consistency with the formula rate of the calculations shown in the Annual True-Up or projected net revenue requirement;

   (e) the prudence of actual costs and expenditures;

   (f) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or

   (g) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

   Without limiting the generality of the foregoing, such information requests may include questions related to the data described in Sections I.4(a) and (c) and Section I.6 above.

4. EMW shall make a good faith effort to respond to information requests pertaining to a True-Up Adjustment within ten (10) business days of receipt of such requests. Information requests received after 4 p.m. Central Prevailing Time shall be considered received the next business day.

5. To the extent EMW and any Interested Party(ies) are unable to resolve disputes related to information requests for the Annual Update or

True-up Adjustment submitted in accordance with these Formula Rate Implementation Protocols, EMW or any Interested Party may petition the FERC to appoint an Administrative Law Judge as a discovery master. The discovery master shall have the power to issue binding orders to resolve discovery disputes and compel the production of discovery, as appropriate, in accordance with the Formula Rate Implementation Protocols and consistent with the FERC's discovery rules.

6. Any Interested Party shall have until the later of one-hundred fifty (150) days after June 1 or thirty (30) days after EMW's last response to reasonable information requests submitted pursuant to Section II.3 above to notify EMW in writing of any specific challenges to the True-Up Adjustment ("Informal Challenges"). Any Interested Party shall have until the later of November 24 or thirty (30) days after EMW's last response to reasonable information requests submitted pursuant to Section II.3 above to notify EMW in writing of any specific challenges to the Annual Update ("Informal Challenges"). Challenges to the Formula Rate itself shall not be considered Informal Challenges for purposes of these Annual Review Procedures.

**III. Resolution of Challenges**

1. If EMW and any Interested Party(ies) have not resolved all Informal Challenges identified pursuant to Section II.6 above within sixty (60) days after the deadline in Section II.6 for written notification of Issues, senior management of the Interested Party(ies) and EMW shall make a good faith effort to resolve any outstanding Informal Challenges ("Senior Management Review").

2. (a) If EMW's and any Interested Party's(ies') senior management are unable to resolve all Informal Challenges within thirty (30) days after the Senior Management Review commences, the Interested Party(ies) may file a challenge to the Annual Update or True-Up Adjustment ("Formal Challenge"). Challenges to the Formula Rate itself shall not be considered "Formal Challenges" for purposes of these Annual Review Procedures.

    i. Deadline for Formal Challenge notice is the later of thirty (30) days after Senior Management Review or March 1.

    ii. Any Interested Party may notify EMW in writing of a Formal Challenge to the Annual Update or True-Up Adjustment.

    (b) All information produced pursuant to these Protocols may be included in any Formal Challenge, in any other proceeding concerning the Formula Rate initiated at FERC pursuant to the Federal Power Act, or in any proceeding before the U.S. Court of Appeals to review a FERC decision involving the Formula Rate. EMW may, however, designate any response to an information request as confidential if the information conveyed is not publicly available. Interested Parties' representatives shall treat such response as confidential in connection with any of the proceedings discussed in this section; provided, however, that when so used, such response shall initially be filed under seal (unless the claim of confidentiality is waived by EMW), subject to a later determination by the presiding authority that the material is, in whole or in part, not entitled to confidential treatment.

    (c) The Informal as well as Formal Challenges shall be limited (as listed in Sections II.3(a) through (g)) to that which is appropriate to determine if EMW has properly calculated the Annual Update or True-Up and whether the costs included in the Annual Update or True-Up are appropriately recovered under the terms of the Formula Rate and the Formula Rate has been applied according to its terms.

(d) The notification for the Informal and Formal Challenges should contain sufficient information to present the issue in question, as well as sufficient contact information.

i. The written notification should be addressed to:

Regulatory Affairs –Transmission
Evergy Missouri West Inc.
P.O. Box 418679
Kansas City, MO 64141-9679

ii. E-mail notifications can be made to:

Regulatory.affairs@evergy.com

(e) Notification for Formal Challenges can also be made as provided in Section IV.

3. In any proceeding ordered by the FERC in response to a Formal Challenge, EMW will bear the burden of proof in accordance with applicable FERC precedent as it may be modified by the FERC.

4. Any refunds or surcharges resulting from an Informal Challenge or Formal Challenge not resolved by November 20 shall be calculated, with interest, from the effective date of the challenged True-Up Adjustment, and shall be reflected in the True-Up Adjustment and Annual Update for the next Rate Year.

5. In the event that EMW identifies an error in an Annual Update or True-Up Adjustment (or a FERC Form No. 1 or successor form which is used as an input to the Formula Rate), or is required by applicable law or a court or regulatory body to correct an error, EMW shall correct such error in good faith and without regard to whether the correction increases or decreases EMW's revenue requirements. There will be no mid-year rate adjustments. Any such correction will be implemented in the True-Up Adjustment and Annual Update for the next Rate Year, with interest. Nothing in these Protocols should or may be construed as preventing an Interested Party or the FERC from contesting such correction.

**IV. Informational Filing**

1. By March 15 of each year, EMW shall submit to FERC an informational filing ("Informational Filing") of its projected net revenue requirement for the Rate Year, including its Annual Update and True-Up Adjustment. If March 15 falls on a holiday or weekend day, the filing will be made the next business day. This Informational Filing must include the information that is reasonably necessary to determine: (1) that input data under the formula rate are properly recorded in any underlying workpapers; (2) that EMW has properly applied the formula rate and these procedures; (3) the accuracy of data and the consistency with the formula rate of the Transmission Revenue Requirement and rates under review; (4) the extent of accounting changes that affect formula rate inputs; and (5) the reasonableness of projected costs. The Informational Filing must also describe any corrections or adjustments made during that period, and must describe all aspects of the formula rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. Within five (5) days of such

Informational Filing, EMW shall provide notice of the Informational Filing via an email exploder list and by posting the docket number assigned to EMW's Informational Filing on the SPP website and OASIS.

2. Any challenges to the implementation of the Attachment H-EMW Formula Rate must be made through the challenge procedures described in Section III of these Protocols or in a separate complaint proceeding. For any known challenges still working through the challenge procedures and not known to be a Formal Challenge by the March 15 Informational Filing, Interested Parties can also file protests or comments to EMW's annual Informational Filing.

**V. Joint Meeting with Transmission Owners**

Each year EMW shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members, and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

**VI. Miscellaneous**

1. Nothing in these Protocols limits or deprives EMW, the FERC or any Interested Party of any rights it may otherwise have under any applicable provision of the Federal Power Act. The provisions of these Protocols addressing review and challenge of the Annual Update or True-Up Adjustment are not intended to nor shall be construed as limiting EMW's, FERC's or any party's rights under any applicable provision of the Federal Power Act.

2. Notwithstanding the provisions of Section VI.1, before EMW or any Interested Party may bring any new action at the FERC involving the Formula Rate, senior management of such Interested Party(ies) and EMW shall make a good faith effort to resolve any outstanding issues. If EMW's and any Interested Party's(ies') senior management are unable to resolve all issues within thirty (30) days, then EMW or the Interested Party(ies) may bring such action. For the avoidance of doubt, the advance notice and negotiation requirement in this Section VI.2 shall not apply to Formal Challenges (as to which the Senior Management Review provisions in Section III apply) nor shall the requirement bar an Interested Party from intervening in, filing a protest under FPA § 206 in, or fully participating in any proceeding initiated by the FERC *sua sponte* or otherwise properly initiated before the FERC.

AEP West SPP Member Transmission Companies
Transmission Cost of Service Formula Rate
Utilizing Actual / Projected Cost Data for the 2XXX Rate Year
COMPANY NAME

**Letter** **Notes**

General Note: True Up References to data from FERC Form 1 are indicated as: page#.line#.col.#. Rate Year Projections from Company forecasts.

A The revenue credits shall include a) amounts received directly from the SPP for PTP transmission services, b) direct assignment charges for transmission facilities, the cost of which has been included in the TCOS, and c) amounts from customers taking service under grandfathered agreements, where the demand is not included in the rate divisor. Revenues associated with FERC annual charges, gross receipts taxes, ancillary services or facilities excluded from the TCOS are not included as revenue credits. Revenue from Transmission Customers whose coincident peak loads are included in the DIVISOR of the load-ratio share calculation are not included as revenue credits. See Worksheet H for details.

B The annual and monthly net plant carrying charges on page 1 are used to compute the revenue requirement for facilities and any upgrades.

C This additional revenue requirement is determined using a net plant carrying charge (fixed carrying charge or FCR) approach. Worksheet G shows the calculation of the trued-up revenue requirement for each project, based on an FCR rate calculated from inputs on this TCOS. Line 13 shows the incremental ARR for projects receiving incentives as accepted by FERC. These individual additional revenue requirements are summed for the true-up year, and included here.

D The gross plant, accumulated depreciation, and deferred tax balances included in rate base and depreciation expense are reduced by the removal of amounts related to Asset Retirement Obligations (AROs). This is to comply with the requirements of FERC Rulemaking RM02-7-000.

E The total-company balances shown for Accounts 281, 282, 283, 190 only reflect ADIT that relates to utility operations. The balance of Account 255 is reduced by prior flow throughs and is completely excluded if the utility chose to utilize amortization of tax credits against FIT expense as discussed in Note N. An exception to this is pre-1971 ITC balances, which are required to be taken as an offset to rate base. Account 281 is not allocated to transmission. Transmission allocations are shown on Worksheet C.

F Identified as being transmission related or functionally booked to transmission.

G Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission on line 70.

H Consistent with Paragraph 657 of Order 2003-A, the amount on line is equal to the balance of IPP System Upgrade Credits owed to transmission customers that made contributions toward the construction of System upgrades, and includes accrued interest and unreturned balance of contributions. The annual interest expense is included on line 113.

I Line 65 Removes the expense booked to transmission accounts included in the development of OATT ancillary services rates, including all of Account No. 561.

J Removes cost of transmission service provided by others to the extent such service is not incurred to provide the SPP service at issue.

K General Plant and Administrative & General expenses may be functionalized based on allocators other than the W/S allocator. Full documentation must be provided.

L Expense reported for these A&G accounts will be included in the cost of service only to the extent they are directly assignable or allocable to transmission service. Worksheet J allocates these expense items. Acct 928 Includes Regulatory Commission expenses itemized in FERC Form-1 at page 351, column H. FERC Assessment Fees and Annual Charges shall not be allocated to transmission. Only safety-related and educational advertising costs in Account 930.1 are included in the TCOS. Account 930.2 includes the expenses incurred by the transmission function for Associated Business Development revenues given as a credit to the TCOS on Worksheet H.

M Recoverable PBOP expense is based on actual annual PBOP costs, including charges from the AEP Service Corporation. The PBOP amounts are included in the Administrative and General total, and are based on current year expenses. The annual actuarial valuation report supporting the derivation of the PBOP expense, along with an explanation of PBOP derivation process, is submitted during the formula rate annual update.

N Includes only FICA, unemployment, property and other assessments charged in the current year. Gross Receipts tax, Sales & Use taxes, local franchise taxes, and taxes related to income are excluded.

O The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) (ln 99) multiplied by (1/1-T) . If the applicable tax rates are zero enter 0.

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | | |
| | SIT= | - | (State Income Tax Rate or Composite SIT. Worksheet K) |
| | p = | - | (percent of federal income tax deductible for state purposes) |

Excess / (Deficit) Deferred Income Taxes will be amortized over the average remaining life of the assets to which it relates, unless the Commission requires a different amortization period. Recovery of permanent and flow through differences is limited to only the transmission functional portion of the tax difference

related to capitalized AFUDC Equity.

P The Texas Gross Margin tax is calculated on the Texas allocated revenue of the Company, reduced by cost of goods sold deduction to derive a "Gross Margin" for the Company. The tax rate of one percent is assessed on the resulting amount. The jurisdictional allocator is based on transmission demand allocators.

Q Removes plant excluded from the OATT because it does not meet the SPP's definition of Transmission Facilities or is otherwise ineligible to be recovered under the OATT.

R Removes transmission plant (e.g. step-up transformers) included in the development of OATT ancillary service rates and not already removed for reasons indicated in Note Q.

S Includes functional wages & salaries incurred by parent company service corporation for support of the operating company.

T Long Term Debt cost rate = Long-Term Interest (ln 132) / Long Term Debt (ln 141). Preferred Stock cost rate = preferred dividends (ln 133) / preferred outstanding (ln 142).
Common Stock cost rate (ROE) = 10.5%, the rate accepted by FERC pursuant to the settlement filed in Docket Nos. EL17-76 and EL18-199. It includes an additional 50 basis points for remaining a member of the SPP RTO.
The capital structure of AEP Southwestern Transmission Co. will be based on the capital structure of SWEPCO until it establishes a stand alone capital structure.
AEP Oklahoma Transmission Company uses its own capital structure.
The amount of eligible hedging gains or losses included in total interest expense is limited to five basis points of the capital structure. Details and calculations of the weighted average cost of capital are shown on Worksheet M. Eligible Hedging Gains and Losses are computed on Worksheet M. The unamortized balance of eligible hedge gains/losses and related ADIT amounts shall not flow through the formula rate.

U The cost of service will make a rate base adjustment to remove unfunded reserves associated with contingent liabilities recorded to Accounts 228.1-228.4 from rate base.

V O&M and A&G shall be adjusted to remove all regulatory asset deferrals and amortizations that have not been approved by FERC for inclusion in cost of service, and then to add back in FERC approved amortizations and deferrals. Negative amounts in O&M or A&G represent deferrals. See Worksheet S.

W If the company submits a Section 205 filing proposing to make adjustments to this formula rate cost of service template to remove assets and costs related to transmission facilities constructed and operated specifically for the purpose of delivering the output of generation facilities, including generation tie-lines, which do not qualify under the SPP OATT for inclusion in transmission cost of service, challenges to such filing(s) shall be limited to the justness and reasonableness of such proposal.

**COMPANY NAME**

NOTES

Include only excess DFIT recorded in accounts which are included in the formula rate cost of service. These include one or more subaccounts within accounts 190.1, 282.1, and 283.1.

*NOTE A: In the event of future tax rate changes that will rely on settlement-based amortization amounts or periods, additional columns can be added to reflect those changes. Future settlements addressing the amortization of unprotected excess or deficient ADIT will not be reflected hereon without first obtaining Commission authorization in a section 205 filing under the Federal Power Act.*

*NOTE B: In the event that an initial unprotected, excess or deficient ADIT amount changes due to adjustments, residual balances will be amortized in the final year of the amortization period.*

*The information provided on this worksheet reflects the activity on the books of the Company. In the event the Excess or Deficient ADIT associated with a specific tax rate change will be passed back or recovered on the basis of an approved settlement the Company will use WS C-4 for that purpose, as opposed to book amounts that are shown on this work sheet. See NOTE E and NOTE G below for a further description on how the Company will track future tax rate changes and ensure the proper net amount is recorded on line 105 in the TCOS of the formula.*

*NOTE A: In order to ensure ratebase neutrality, AEP utilizes the fourth digit of its seven digit FERC tax subaccount numbers to identify balances associated with utility operations vs. regulatory reporting requirements. A "1" in the fourth digit of a FERC tax account refers to the utility operations balances or activity. Accounts with the "1" designation will be included in the determination of ratebase to be recovered in the formula rate. A "4" in the fourth position of the account number indicates accounts used to track regulatory accounting requirements. The excess ADIT amounts recorded in accounts with the "4" designation will be contra to the "1" balance, which will ensure that in the formula rate the excess or deficiency amounts will be part of ratebase, but at the total FERC account level the tax liability or asset will be recorded at the current Federal FIT rate. The amounts recorded in the "4" accounts will be offset on a net basis in the regulatory asset or liability subaccount established for this purpose.*

*NOTE B: The amount of the FIT gross up to recorded on regulatory assets and liabilities will be reported on the first line of ADIT accounts provided for each specific change in tax rates.*

*NOTE C: The amounts of the remeasurement shown here are as of the effective date of the change in tax rates and will remain static on this workpaper. The derivation of this amount, along with the pre-remeasurement and post-remeasurement balances of ADIT, are presented in formula wokpaper(s) C-5-X.*

*NOTE D: {REFERENCE OR CITES TO APPROVAL OF AMORTIZATION PERIOD FOR UNPROTECTED EXCESS ADIT}*

*NOTE E: In the event of future tax rate changes, additional lines will be inserted above as required to reflect any new ADIT or regulatory deferral accounts that may be necessary to track that tax rate change.*

*NOTE F: The amount of excess amortization entries shown in lines 1a through 1j are shown as a debit or credit to the ADIT account from which it is being amortized. The totals in line 3 is the offset recorded to the 410/411 tax expense account.*

*NOTE G: Amortization expense determined on WS C-4 due to a settlement will supersede the amortization of excess and deficient ADIT included in Column N, Ln 3 of this worksheet, due to the primacy of settlement over book amounts in the determination of the revenue requirement.*

*NOTE H: Deficient remeasurement amounts will be recorded in 410.1 as a debit (expense) to cost of service; excess remeasurement amounts will be recorded in 411.1 as a credit to cost of service.*

*NOTE I. In the event that there are adjustments reported in column K of this worksheet that would result in changes to the initial unprotected excess or deficient ADIT amounts, AEP will provide supporting documentation for those adjustments to customers as a part of its annual update process.*

*GENERAL NOTE: This worksheet will summarize remeasurement adjustments in ADIT Accounts required by changes in either Federal or State Income Tax Rates. A new sheet will be included in the working formula for each change to tax rates that may occur while this formula rate is in effect. New pages will be designated by incrementing the suffix letter in the workpaper name (i.e. C-5-A, C-5-B, etc.)*

*NOTE 1: Amount of Remeasurement in Column E will be based on supporting workpapers showing the remeasurement of individual ADIT items in each tax deferral account, and will indicate whether each remeasured ADIT item will be treated as protected or unprotected. The resulting totals will be shown on this worksheet for each ADIT account.*

*NOTE 2: Remeasurement calculation may not equal ___% of the _{DATE OF REMEASUREMENT}_____ deferral balance because of specific ADIT items that are not subject to remeasurement.*

*NOTE 3: [NOTES/EXPLANATIONS OF AMOUNTS REPORTED IN COLUMN G, IF NECESSARY]*

*NOTE 4: Ties to each Transmission Companies' Workpaper C-5, Column F, showing the initial remeasurement value determined as a result of the _{TAX RATE LEGISLATION}_____.*

| | $ - | | $ - | $ - |
| | $ - | | $ - | $ - |
| | $ - | | $ - | $ - |
| | $ - | | $ - | $ - |

** This is the total amount that needs to be reported to SPP for billing to all regions.

**** This is the calculation of additional incentive revenue on projects deemed by the FERC to be eligible for an incentive return. This additional incentive requirement is applicable for the life of this specific project. Each year the revenue requirement calculated for SPP should be incremented by the amount of the incentive revenue calculated for that year on this project.**

***CALCULATION OF RECOVERABLE HEDGE GAINS/LOSSES***

39 NOTE: The net amount of hedging gains or losses recorded in account 427 to be recovered in this formula rate should be limited to the effective portion of pre-issuance cash flow hedges that are amortized over the life of the underlying debt issuances. The recovery of a net loss or passback of a net gain will be limited to five basis points of the total Capital Structure.
Amounts related to the ineffective portion of pre-issuance hedges, cash settlements of fair value hedges issued on Long Term Debt, post-issuance cash flow hedges, and cash flow hedges of variable rate debt issuances are not recoverable in this formula and are to be recorded in the "Excludable" column below.

| | HEDGE AMOUNTS BY ISSUANCE (FROM p. 256-257 (i) of the FERC Form 1) | Total Hedge (Gain)/Loss for 2XXX | Less Excludable Amounts (See NOTE on Line 39) | Net Includable Hedge Amount | Remaining Unamortized Balance | Amortization Period Beginning | Ending |

| True-Up Adjustment with Interest | - |
| Less Over (Under) Recovery | - |
| Total Interest | - |

**Note 1:** The monthly interest rates to be applied to the over recovery or under recovery amounts during the true-up year and the intermediate year will be determined using the monthly FERC interest rates (as determined pursuant to 18 C.F.R. Section 35.19a) posted at https://www.ferc.gov/enforcement/acct-matts/interest-rates.asp. The monthly interest rate to be applied to the over recovery or under recovery amounts each month during the rate year will equal a simple average of the 12 monthly interest rates for the intermediate year.

Note 2: An over or under collection for the Schedule 11 charge will be recovered prorata over the true-up year, held for the intermediate year and returned prorata over the rate year.

Note 1 - These depreciation and amortization rates will not be changed absent a Section 205 or 206 filing at the Commission.
Note 2 - Oklahoma depreciation rates were approved in Cause No. PUD 202100055, the rates were made effective on November 1, 2021.

## Addendum 12 to Attachment H – Part 2

## THE AEP WEST TRANSMISSION COMPANIES FORMULA RATE IMPLEMENTATION PROTOCOLS

The formula rate template ("Template"), and these formula rate implementation protocols ("Protocols") together comprise the filed rate ("Formula Rate") of AEP Oklahoma Transmission Company, Inc. and AEP Southwestern Transmission Company, Inc. (collectively "AEP West Transcos" or "AEP") for transmission revenue requirement determinations under the Southwest Power Pool ("SPP") Open Access Transmission Tariff ("SPP Tariff"). AEP shall follow the instructions specified in the Formula Rate to calculate annually its net annual transmission revenue requirement, as set forth in the Template ("Net Revenue Requirement"). The Net Revenue Requirement shall be determined for January 1 to December 31 of a given calendar year (the "Rate Year"). The Net Revenue Requirement will include revenue requirements and rate calculations for SPP Schedule 1 NITS, Schedule 9 Zonal NITS, and Schedule 11 (Base Plan). The Formula Rate shall become effective for recovery of AEP's Net Revenue Requirement upon the effective date for incorporation into the SPP Tariff through a filing with the Federal Energy Regulatory Commission ("FERC" or "Commission") under Section 205 of the Federal Power Act ("FPA"), 16 U.S.C. § 824d.

### Section 1. Annual Projection

a. No later than October 31 preceding a Rate Year, and each subsequent Rate Year, AEP shall determine its projected Net Revenue Requirement for the upcoming Rate Year in accordance with the Formula Rate ("Annual Projection"). The Annual Projection shall include the True-Up Adjustment described and defined in Section 2 below, if applicable. Upon determining the Annual Projection, AEP shall cause an electronic version of the Annual Projection to be posted in both a Portable Document Format ("PDF") and a data-populated formula rate in native format with all formulae/links intact at a publicly accessible location on SPP's internet website and OASIS, and make a corresponding informational filing at FERC. The date on which the posting occurs shall be that year's "True-Up Publication Date."

b. The posting of the Annual Projection shall:

(i.) Provide the Formula Rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used in the projected Net Revenue Requirement;

(ii.) Include all inputs in sufficient detail to identify the components of AEP's projected Net Revenue Requirement, explanations of the bases for the projections and input data, including workpapers in native software application format, to enable Interested Parties[1] to replicate the calculation of the projected Net Revenue Requirement;

(iii.) With respect to any Accounting Changes (as that term is defined in Section 3.e.iii)

A. Identify any Accounting Changes including:

i. The initial implementation of an accounting standard or policy;

ii. The initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

iii. Correction of errors and prior period adjustments that impact the projected Net Revenue Requirement calculation;

iv. The implementation of new estimation methods or policies that change prior estimates; and

v. Changes to income tax elections;

B. Identify items included in the projected Net Revenue Requirement at an amount other than on a historic cost basis (e.g., fair value adjustments);

C. Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs to the projected Net Revenue Requirement; and

D. Provide, for each item identified pursuant to Section 1.b.iii.A - C of these Protocols, a narrative explanation of the individual impact of such changes on the projected Net Revenue Requirement.

(iv.) Include the following information related to affiliate cost allocation:

A. A detailed description of the methodologies used to allocate and directly assign costs between AEP and its affiliates by service category or function, including any changes to such cost allocation methodologies from the prior year, and the reasons for those changes; and

B. The magnitude of such costs that have been allocated or directly assigned between AEP and each affiliate by service category or function.

c. If the date for making the posting of the Annual Projection should fall on a weekend or a holiday recognized by FERC, then the posting shall be made no later than the next business day.[2] Within five (5) calendar days of the posting, AEP shall provide notice of such posting via the SPP email subscription ("SPP Exploder List"). Interested Parties can subscribe to the SPP Exploder List on the SPP website.

d. Together with the posting of the Annual Projection, AEP shall cause to be posted on the SPP internet website and OASIS, and distributed to the SPP Exploder List, the time, date, location, and remote-access information for a stakeholder meeting with Interested Parties in order for AEP to explain its Annual Projection and to provide Interested Parties an opportunity to seek information and clarifications regarding the Annual Projection ("Annual Projection Meeting"). The Annual Projection Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business days after the posting of the Annual Projection. Notice of the Annual Projection Meeting shall be provided via the SPP Exploder List no less than seven (7) calendar days prior to the meeting. AEP will provide remote access to the Annual Projection Meeting in order to ease burdens (e.g. travel costs) to ensure all Interested Parties have the opportunity to participate.

e. To the extent AEP agrees to make changes in the Annual Projection for a given Rate Year, such revised Annual Projection shall be promptly posted at a publicly accessible location on SPP's internet website and OASIS, and e-mailed to the SPP Exploder List. Changes posted prior to November 30 preceding the Rate Year, or the next business day if November 30 is not a business day (or such later date as can be accommodated under SPP's billing practices), shall be reflected in the Annual Projection for the Rate

Year; changes posted after that date will be reflected, as appropriate, in the True-Up Adjustment for the Rate Year.

f. The Annual Projection, including the True-Up Adjustment, for each Rate Year shall be subject to review, challenge, true-up, and refunds or surcharges with interest, to the extent and in the manner provided in these Protocols.

---

1 As used in these Protocols, "Interested Parties" shall include but not be limited to: (i) any Eligible Customer under the SPP Tariff; (ii) any regulatory agency with rate jurisdiction over a public utility located within the SPP footprint; (iii) any consumer advocate authorized by state law to review and contest the rates for any such public utility; and (iv) any party with standing under FPA section 205 or section 206.

2 For the purposes of these Protocols, if any deadline included in these Protocols should fall on a weekend or a holiday recognized by FERC, then the deadline shall be extended to the next business day.

**Section 2. True-Up Adjustment**

AEP will calculate the amount of under- or over-collection of its actual Net Revenue Requirement during the preceding Rate Year ("True-Up Adjustment") after the FERC Form No. 1 data for that Rate Year has been filed with the Commission. The True-Up Adjustment shall be the sum of the True-Up Adjustment Over/Under Recovery as determined in Section 2(a) and the Interest on the True-Up Adjustment Over/Under Recovery as determined in Section 2(b):

a. AEP's projected Net Revenue Requirement collected during the previous Rate Year[3] will be compared to AEP's actual Net Revenue Requirement for the previous Rate Year calculated in accordance with AEP's Formula Rate and based upon (i) AEP's FERC Form No. 1 for that same Rate Year, (ii) any FERC orders specifically applicable to AEP's calculation of its annual revenue requirement, (iii) the books and records of AEP (which shall be maintained consistent with the FERC Uniform System of Accounts ("USofA")), (iv) FERC accounting policies and practices applicable to the calculation of annual revenue requirements under formula rates, and (v) any aspects of the SPP Tariff Governing Documents that apply to the calculation of annual revenue requirements under individual transmission

owner formula rates,[4] to determine any over- or under-recovery ("True-Up Adjustment Over/Under Recovery").

b. Interest on any True-Up Adjustment Over/Under Recovery shall be calculated separately for the SPP Zonal NITS Annual Transmission Revenue Requirement (ATRR), Base Plan ATRR (Base Plan Upgrades) and Schedule 1 Scheduling, System Control, and Dispatch Service (Schedule 1). For the Zonal NITS ATRR and Schedule 1 NITS True-Up Adjustments, monthly interest will be calculated on the Over/Under Recovery during each month of the True-Up Year and for the first six months following the True-Up Year (during the Intermediate Year). The Zonal NITS ATRR and Schedule 1 NITS True-Up adjustments, along with the interest calculated during the eighteen (18) months as described above will be invoiced or refunded to customers all at once during the July billing. For the Base Plan ATRR True-Up Adjustment, monthly interest will be calculated on the Over/Under Recovery during each month of the True-Up Year, during each month of the succeeding year ("Intermediate Year") (12 months-True-up Year plus one), and during each month of the year in which the true-up will be billed and collected ("Projection Year") (True-Up Year plus two). The total true-up adjustment and interest for the 36 months described above will be added to (or deducted from) each Base Plan Project on a pro rata basis for determination of the Base Plan ATRR during the 12 months of the Projection Year.

For example, the 2018 True-Up adjustment will be calculated in 2019 and will be billed or credited to customers during 2020. The True-Up adjustments will include interest calculations over a 36-month period, including the 12 months during the True-Up year (2018), the 12 months during the Intermediate Year (2019) and the 12 months during the Projection Year (2019) in which the True-Up Adjustment is remitted to customers.

c. The rates used to calculate interest for True-Up Adjustments will be sourced directly from the FERC website in accordance with 18 C.F.R. § 35.19a. The monthly interest rate used to calculate interest during each month of the Projection Year will be based on an average of the 12 monthly interest rates during the Intermediate Year. Interest True-up adjustments will be compounded quarterly in accordance

with 18 C.F.R. § 35.19a.

---

[3] If the initial use of this Formula Rate covers only part of a calendar year, the initial projected annual Net Revenue Requirement will be divided by 12 to calculate the monthly projected cost of service to be collected each month, or portion thereof, it is effective that first year. Similarly, the actual Net Revenue Requirement will be divided by 12 to calculate the actual cost of service to be collected during those same months of that year. Similar calculations of projected Net Revenue Requirement and actual Net Revenue Requirement will be made for the months prior to the effective date of this Formula Rate using the previous formula rate in effect during those months. The actual Net Revenue Requirements computed under each of the two formula rate periods that initial Rate Year will be added together to obtain the total actual Net Revenue Requirement. The first True-up Adjustment will compare this total actual Net Revenue Requirement to the Net Revenue Requirement collected under the two formulas for that initial Rate Year.

[4] SPP Tariff Governing Documents include the SPP Tariff, Bylaws, Criteria, and Membership Agreements.

**Section 3. Annual Update**

a. On or before May 25 following each Rate Year, AEP shall calculate its actual Net Revenue Requirement and the True-Up Adjustment as described in Section 2 ("Annual Update") for such Rate Year and, together with such other information described in this Section 3, shall cause such Annual Update to be posted, in both a PDF and a data-populated formula rate in native format with all formulae/links intact, at a publicly accessible location on SPP's internet website and OASIS, and make a corresponding informational filing at FERC. Within five (5) calendar days of such posting, SPP shall provide notice of such posting via the SPP Exploder List.

b. If the date for making the Annual Update posting should fall on a weekend or a holiday recognized by the FERC, then the posting shall be due on the next business day.

c. The date on which the posting occurs shall be that year's "Annual Update Publication Date."

d. Together with the posting of the Annual Update, AEP shall cause to be posted on the SPP website and OASIS the time, date, location, and remote-access information for a stakeholder meeting with Interested Parties in order for AEP to explain its Annual Update and to provide Interested Parties an opportunity to seek information and clarifications regarding the Annual Update ("Annual Update

Meeting"). Notice of the Annual Update Meeting shall be provided via the SPP Exploder List no less than seven (7) calendar days prior to the meeting. The Annual Update Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business days after the Annual Update Publication Date. AEP will provide remote access to the Annual Update Meeting in order to ease burdens (e.g. travel costs) to ensure all Interested Parties have the opportunity to participate.

e. The Annual Update posting for the Rate Year:

(i.) Shall provide, via the Formula Rate worksheets and associated workpapers in native software application format, sufficiently detailed supporting documentation for data (and all adjustments thereto or allocations thereof) used in the Formula Rate that are not stated in the FERC Form No. 1;[5]

(ii.) Shall provide sufficient detail and sufficient explanation to enable Interested Parties to replicate the calculation of the Annual Update results from the FERC Form No. 1 and verify that each input to the Template is consistent with the requirements of the Formula Rate;

(iii.) Shall identify:

A. Any change in accounting that affects inputs to the Template or the resulting charges billed under the Formula Rate ("Accounting Change"), including:

i. The initial implementation of an accounting standard or policy;

ii. The initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

iii. Correction of errors and prior period adjustments that impact the True-Up Adjustment calculation;

iv. The implementation of new estimation methods or policies that change prior estimates; and

v. Changes to income tax elections;

B. Any items included in the Annual Update at an amount other than on a historic cost basis (e.g., fair value adjustments);

C. Any reorganization or merger transaction during the previous year and an explanation of the effect of the accounting for such transaction(s) on inputs to the Annual Update;

D. For each item identified pursuant to Sections 3.e.iii.A - C of these Protocols, the individual impact (in narrative format) of such changes on the Annual Update.

(iv.) Shall be subject to review and challenge in accordance with the procedures set forth in Sections 4, 5, and 6 of these Protocols.

(v.) Shall be subject to review and challenge in accordance with the procedures set forth in these Protocols with respect to the prudence of any costs and expenditures included for recovery in the Annual Update; provided, however, that nothing in these Protocols is intended to modify the Commission's applicable precedent with respect to the burden of going forward or burden of proof under formula rates in such prudence challenges; and

(vi.) Shall not seek to modify the Formula Rate and shall not be subject to challenge by any Interested Party seeking to modify the Formula Rate (i.e., any modifications to the Formula Rate will require, as applicable, an FPA section 205 or section 206 filing or initiation of a section 206 investigation).

f. The following Formula Rate inputs shall be stated values to be used in the Formula Rate until changed pursuant to an FPA section 205 or section 206 proceeding: (i) rate of return on common equity ("ROE"); and (ii) the depreciation and/or amortization rates as set forth in Worksheet T included with the Formula Rate template.

g. **Example - Timelines for 2018 Annual Projection and 2019 Annual Update**:

On or before October 31, 2017, AEP will determine the projected Net Revenue Requirement for the 2018 Rate Year. AEP will post the Annual Projection for the 2018 Rate Year in accordance with

Section 1 above. On or before May 25, 2019, AEP will post its Annual Update, consisting of the actual Net Revenue Requirement and True-Up Adjustment for the 2018 Rate Year determined pursuant to Section 2 above. Such True-Up Adjustment for the Zonal NITS ATRR and Schedule 1 NITS will be reflected in July 2019 bill. The Base Plan True-Up will be reflected in the Annual Projection of the Base Plan Project Revenue Requirements for the 2020 Rate Year posted on or before October 31, 2019.

---

5 It is the intent of the Formula Rate, including the supporting explanations and allocations described therein, that each input to the Formula Rate for purposes of determining the actual Net Revenue Requirement for a given Rate Year will be either taken directly from the FERC Form No. 1 or reconcilable to the FERC Form No. 1 by the application of clearly identified and supported information. If the referenced form is superseded, the successor form(s) shall be utilized and supplemented as necessary to provide equivalent information as that provided in the superseded form. If the referenced form is discontinued, equivalent information as that provided in the discontinued form shall be utilized.

**Section 4. Annual Review Procedures**

Each Annual Update and Annual Projection shall be subject to the following review procedures ("Annual Review Procedures"):

a. Interested Parties shall have up to the later of two-hundred-ten (210) calendar days after the applicable Publication Date, or thirty (30) calendar days after the receipt of all responses to timely submitted information requests (unless such period is extended with the written consent of AEP or by FERC order) ("Review Period"), to review the calculations and to notify AEP in writing, which may be made electronically, of any specific challenges to the Annual Update or Annual Projection ("Preliminary Challenge"), including challenges related to Accounting Changes. An Interested Party submitting a Preliminary Challenge must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. Upon receipt of a Preliminary Challenge, AEP will endeavor to send the Preliminary Challenge to SPP within five (5) business days. AEP shall request that SPP post all Preliminary Challenges at a publicly accessible location on SPP's internet website and OASIS, and that a link to the website will be e-mailed to the SPP Exploder List.

b. In the event of a Preliminary Challenge, AEP will appoint a senior representative to work with the Interested Party (or its representatives) toward a resolution of the dispute.

c. AEP shall respond in writing to a Preliminary Challenge(s) within twenty (20) business days of receipt, and its response shall notify the challenging party of the extent to which AEP agrees or disagrees with the challenge. If AEP disagrees with the Preliminary Challenge, it will provide the Interested Party with an explanation supporting the challenged inputs, explanations, allocations, calculations, or other information. AEP shall promptly cause to be posted its responses to all Preliminary Challenges at a publicly accessible location on SPP's internet website and OASIS, and a link to the website will be e-mailed to the SPP Exploder List. Provided however, that Preliminary Challenges and responses to Preliminary Challenges that include material deemed by AEP to be confidential information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by AEP and the requesting party.

d. AEP shall respond to all Preliminary Challenges submitted during the Review Period by no later than thirty (30) calendar days after the end of the Review Period.

e. Interested Parties shall have up to one-hundred-fifty (150) calendar days after each annual Publication Date (unless such period is extended with the written consent of AEP or by FERC order) to serve reasonable information requests on AEP ("Discovery Period").

f. Information requests shall be limited to what is necessary to determine: (i) the extent, effect, or impact of an Accounting Change; (ii) whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with the Protocols (as provided above in Section 2.a); (iii) the proper application of the Template and procedures in the Protocols; (iv) the accuracy of data and consistency with the Formula Rate of the charges shown in the Annual Update or Annual Projection; (v) the prudence of the actual costs and expenditures, including procurement methods and cost control methodologies; (vi) the effect of any change to the underlying USofA or FERC Form No. 1; and (vii) any other information that may reasonably have substantive effect on the calculation of the charge

pursuant to the Formula Rate. The information requests shall not otherwise be directed to ascertaining whether the Formula Rate is just and reasonable. Information requests shall not solicit information concerning costs or allocations where the costs or allocation methods have been determined to be appropriate in a final order issued by the Commission or by delegation in the context of prior AEP Annual Updates, except that such information requests shall be permitted if they (i) seek to determine if there has been a change in circumstances, (ii) are in connection with corrections pursuant to Section 6 of these Protocols, or (iii) relate to costs or allocations that have not previously been challenged and adjudicated by FERC.

g. AEP shall make a good faith effort to respond to reasonable information requests pertaining to the Annual Update or Annual Projection within fifteen (15) business days of receipt of such requests. AEP shall respond to all reasonable information requests no later than thirty (30) calendar days after the end of the Discovery Period. AEP will cause to be posted on the SPP website and OASIS all information requests from Interested Parties and AEP's response(s) to such requests, and a link to the website will be e-mailed to the SPP Exploder List. Provided however, that information and document requests and responses to information and document requests that include material deemed by AEP to be confidential information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by AEP and the requesting party. Voluminous materials that are unduly burdensome to provide by other means may be made available at a physical AEP site.

h. AEP shall not claim that responses to information and document requests provided pursuant to these Protocols are subject to any settlement privilege in any subsequent FERC proceeding addressing AEP's Annual Update or Annual Projection.

i. To the extent AEP and any Interested Party(ies) are unable to resolve disputes related to information requests submitted in accordance with these Annual Review Procedures, AEP or the Interested Party may petition the FERC to appoint an Administrative Law Judge as a discovery master to resolve the

discovery dispute(s) in accordance with these Protocols and consistent with the FERC's discovery rules.

j. Preliminary Challenges or Formal Challenges (as described in Sections 4 and 5) related to Accounting Changes shall be treated in the same manner under these Protocols as other challenges to the Annual Update or Annual Projection. Failure to make a Preliminary Challenge with respect to an Accounting Change in an Annual Update or Annual Projection shall not act as a bar with respect to a Formal Challenge with respect to that Annual Update or Annual Projection provided that the Interested Party submitted a Preliminary Challenge with respect to one or more other issues. Nor shall such failure bar a subsequent Preliminary Challenge related to a subsequent Annual Update or Annual Projection to the extent such Accounting Change affects the subsequent Annual Update or Annual Projection.

k. If a change made by AEP to its accounting policies, practices, or procedures, or the application of the Formula Rate, is found by the FERC to be unjust, unreasonable, or unduly discriminatory or preferential, then the calculation of the charges to be assessed during the Rate Year then under review, and the charges to be assessed during any subsequent Rate Years, including any True-up Adjustments, shall not include such change, but shall include any remedy that may be prescribed by FERC in the exercise of its discretion as of the effective date of such remedy, to ensure that the Formula Rate continues to operate in a manner that is just, reasonable, and not unduly discriminatory or preferential.

**Section 5. Resolution of Challenges**

a. Interested Parties shall have up to two-hundred-seventy (270) calendar days following the applicable Publication Date (unless such period is extended with the written consent of AEP or by FERC order), to file a challenge with the FERC ("Formal Challenge"). Such Formal Challenge shall be submitted in the same docket as the AEP informational filing and shall be served on AEP by electronic service on the date of such filing in accordance with Section 385.2010(f)(3) of the Commission's regulations. Subject to any applicable confidentiality and Critical Energy Infrastructure Information restrictions, all

information and correspondence produced by AEP pursuant to these Protocols may be included in any Formal Challenge or other FERC proceeding relating to the Formula Rate. This Section 5.a in no way shall affect a party's rights under section 206 of the Federal Power Act as set forth in Section 5.g of these Protocols.

b. Formal Challenges are to be filed pursuant to these Protocols, rather than under rule 206, and shall:

(i.) Clearly identify the action or inaction which is alleged to violate the Formula Rate Template or Protocols;

(ii.) Explain how the action or inaction violates the filed rate Template or Protocols;

(iii.) Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including

A. The extent or effect of an Accounting Change;

B. Whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with these Protocols;

C. The proper application of the Template and procedures in these Protocols;

D. The accuracy of the data and consistency with the Formula Rate of the charges shown in the Annual Update or Annual Projection;

E. The prudence of actual costs and expenditures;

F. The effect of any change to the underlying Uniform System of Accounts or the FERC Form No. 1; or

G. Any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the Template.

(iv.) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(v.) State whether the issues presented are pending in an existing Commission proceeding in which the filing party is a party, or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(vi.) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(vii.) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise reasonably attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(viii.) State whether the filing party utilized the Preliminary Challenge procedures described in these Protocols to dispute the action or inaction raised by the Formal Challenge, and, if not, describe why not.

c. Preliminary and Formal Challenges shall be limited to issues that may be necessary to determine: (i) the extent or effect of an Accounting Change; (ii) whether the Annual Update or Annual Projection fails to include data properly recorded in accordance with these Protocols; (iii) the proper application of the Formula Rate and procedures in these Protocols; (iv) the accuracy of data and consistency with the Formula Rate of the calculations shown in the Annual Update and Annual Projection; (v) the prudence of actual costs and expenditures; (vi) the effect of any change to the underlying Uniform System of Accounts or FERC Form No. 1; or (vii) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

d. Failure to raise an issue in a Preliminary Challenge shall not bar an Interested Party from raising that issue in a Formal Challenge, provided the Interested Party submitted a Preliminary Challenge during the Review Period with respect to one or more other issues. Failure to pursue an issue through a Preliminary Challenge or to lodge a Formal Challenge regarding any issue as to a given Annual Update shall bar pursuit of such issue with respect to that Annual Update, but shall not bar pursuit of such issue or the lodging of a Formal Challenge as to such issue as it relates to a subsequent Annual Update.

e. Any response by AEP to a Formal Challenge must be submitted to the FERC within thirty (30) calendar days of the date of the filing of the Formal Challenge, and shall be served on the filing party(ies) and the SPP Exploder List on the date of such filing.

f. In any Formal Challenge proceeding concerning a given year's Annual Update (including corrections), Annual Projection, or Accounting Change(s), AEP shall demonstrate the justness and reasonableness of the rate resulting from its application of the Formula Rate by demonstrating, with respect to the issue being challenged, that it has correctly applied the terms of the Formula Rate consistent with these Protocols and that it followed the applicable requirements and procedures in the Formula Rate. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

g. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of AEP to file unilaterally, pursuant to section 205 of the FPA and the regulations thereunder, an application seeking changes to the Formula Rate or to any of the stated value inputs requiring a section 205 filing under these Protocols (including, but not limited to, ROE and depreciation and amortization rates), or the right of any other party or the Commission to seek such changes pursuant to section 206 of the FPA and the regulations thereunder.

h. AEP may, at its discretion and at a time of its choosing, make a limited filing pursuant to section 205 to modify stated values in the Formula Rate (i) for amortization and depreciation rates, or (ii) to correct obvious errors or omissions in the Formula Rate such as would result from changes to the FERC Form No. 1. The sole issue in any such limited section 205 proceeding shall be whether such proposed change(s) is just and reasonable, and it shall not address other aspects of the Formula Rate or impose upon AEP any burden with respect to such other aspects of the Formula Rate.

**Section 6. Changes to Annual Updates**

If AEP determines or concedes that corrections to the Annual Update are required, whether under Sections 4 or 5 of these Protocols, including but not limited to those requiring corrections to its FERC Form No. 1, or input data used for a Rate Year that would have affected the Annual Update for that Rate Year, such corrections shall be reflected as adjustments in the Annual Update for the next Rate Year, with interest calculated in accordance with the FERC Interest Rate (as determined pursuant to 18 C.F.R. § 35.19a). This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments.

**Section 7. Joint Meeting of Transmission Owners**

Each year AEP shall endeavor to coordinate with other transmission owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost sharing mechanism and transmission owners that own inter-regional projects whose costs are allocated in part to SPP members in order to arrange a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

**Grand River Dam Authority**

**Transmission Formula Rate Protocols**

I. General. The Grand River Dam Authority ("GRDA") transmission formula rate template and these Transmission Formula Rate Implementation Protocols ("Protocols") together comprise the filed rate ("Formula Rate") of GRDA, for transmission service in the GRDA zone ("GRDA Zone") of the Southwest Power Pool, Inc. ("SPP") footprint. GRDA will follow the instructions specified in the Formula Rate to calculate its Annual Transmission Revenue Requirements ("ATRR") and the rates for Network Integration Transmission Service ("NITS") and Point-to-Point ("PTP") Transmission Service.

II. Annual GRDA Rate Update.

a. Submission of Annual Update to SPP. GRDA will submit to SPP an annual transmission revenue requirement for purposes of Network Integration Transmission Service, Base Plan Upgrades, and for the determination of Point-to-Point rates, which shall be calculated using the Formula Rate Template set forth in Attachment H - Addendum 13 of this Tariff. The Formula Rate shall be applicable to service on and after August 1 of each calendar year through July 31 of the following calendar year ("Rate Year"), beginning with the Annual Update occurring in calendar year 2023, subject to the provisions of these Protocols.

b. Timing and Publication of Rate Update. On or before May 15th of each calendar year, GRDA will:

i. Recalculate the ATRR and the rates for zonal NITS, and zonal PTP service for the new Rate Year in accordance with the Formula Rate ("Annual Update");

ii. Provide its Annual Update to SPP (which may publish the Annual Update on SPP's website);

iii. Post its Annual Update to the GRDA OASIS website; and

iv. If the date for posting the Annual Update falls on a weekend or a holiday recognized by the Federal Energy Regulatory Commission ("FERC"), then the posting shall be due on the next business day. The date on which such posting occurs shall be that year's "Posting Date." Any delay in the Posting Date shall result in an equivalent extension of time for the submission of Information Requests discussed in these Protocols.

c. Notice of Rate Update. Concurrent with the Annual Update postings described above, GRDA will provide a notice of such posting via an email distribution list to all interested parties, including SPP Tariff Transmission Customers, state regulatory agencies with rate jurisdiction over a public utility within the SPP footprint, and any consumer advocate agencies authorized by state law to review and contest the rates for any such public utility ("Interested Parties") by:

i. providing a copy of the Annual Update to SPP, and requesting that SPP:

1. post the Annual Update to the SPP OASIS;

2. distribute the Annual Update to the Formula Rate Posting Information Notification List as maintained by SPP of Interested Parties; provided that such Interested Parties request to be added to the Formula

Rate Posting Information Notification List through the "Exploder List" link on the SPP website, https://www.spp.org/stakeholder-center/exploder-lists.

d. Contents of Annual Update. The Annual Update will:

i. include a workable populated rate formula template with fully functional spreadsheets showing the calculation of the Annual Update and underlying workpapers in native format with links and formulas intact, including sufficiently detailed workpapers and supporting documentation for data;

ii. be based on the independently-audited books and records of GRDA for the most recent fiscal year (January 1 through December 31);

iii. provide sufficient information to enable Interested Parties to replicate the calculation of the formula results from the Formula Rate;

iv. identify, with respect to any change in accounting that affects the inputs to the Formula Rate or the resulting charges billed under the Formula Rate:

1. any accounting changes, such as the initial implementation of an accounting standard or policy; the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific direction; or the correction of errors and prior period adjustments that impact the ATRR.

2. any items included in the Formula Rate at an amount other than a historic cost basis; and

3. the individual impact of any changes in i. or ii. above on charges billed under the Formula Rate.

v. not seek to modify the Formula Rate.

III. Review of Annual Updates. Within twenty (20) but not less than ten (10) days after the posting of GRDA's Annual Update (or, in the event of a delay, within a reasonable time under the circumstances, with notice to all Interested Parties), GRDA will host a Meeting for Interested Parties to discuss the Annual Update ("Annual Meeting"). GRDA will provide notice of this meeting within a reasonable amount of time (on the same business day, if practicable) after GRDA has provided the Formula Rate Update to SPP and posted the Formula Rate Update on GRDA's OASIS website. The notice shall include the date, time and location of the Annual Meeting and shall be provided to the Interested Parties via an email distribution list. The Annual Meeting shall also be available by telephone and/or web access with all meeting materials provided electronically.

IV. Exchange of Information.

a. Interested Parties may begin submitting information requests immediately following the Posting Date of the Annual Rate Update and will have until sixty (60) days following the date of such posting to serve reasonable information requests on GRDA for information and work papers supporting the Annual Rate Update. Such information requests shall be limited to that what is necessary to determine:

i. the extent or effect of an accounting change;

ii. whether the Annual Update fails to include data properly recorded in accordance with the Protocols and the accuracy and consistency of data;

iii. the proper application of the Formula Rate and procedures in these Protocols;

iv. the prudence of actual costs and expenditures, including information on procurement methods and cost control methodologies;

v. the effect of any change to the underlying Uniform System of Accounts or Formula Rate template; or

vi. any other information that may reasonably have a substantive effect on the calculation of the charges pursuant to the Formula Rate.

The information and document requests shall not otherwise be directed to ascertain whether the Formula Rate is just and reasonable.

b. GRDA shall make a good faith effort to respond to information requests pertaining to the Annual Update within seven (7) business days, or, if an additional response time is required, GRDA will respond as soon as reasonably practicable.

c. GRDA shall post on its website and submit to SPP (for availability on the SPP website) all information requests from Interested Parties and GRDA's response(s) to such requests. If responses to information requests contain

information deemed by GRDA to be confidential, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement executed by the requesting party and GRDA.

V. Informal Challenge Procedures.

a. Timeline and General Challenge Process. Interested Parties shall have until July 15 (or the first Business Day after July 15 if July 15 falls on a weekend or holiday) to notify GRDA in writing (which may be electronically) of any specific Informal Challenges. The Informal Challenge must specify the inputs, supporting explanations, allocations calculations, or other information to which the Interested Party objects and provide an appropriate explanation and documents to support its Informal Challenge. GRDA will make a good faith effort to respond to any Informal Challenge within twenty (20) days of notification of such Informal Challenge. GRDA, and, if appropriate, SPP, shall appoint internal representatives to work with the Interested Party to resolve the Informal Challenge.

b. Publication of Challenges and Responses. GRDA will post on its website and provide to SPP all Informal Challenges from Interested Parties and GRDA's responses to the Informal Challenges. If responses to information requests contain information deemed by GRDA to be confidential, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement executed by the requesting party and GRDA.

c. Revisions Secondary to Challenges. If GRDA makes changes or adjustments to the Annual Update resulting from the Information Exchange and Informal Challenge procedures that are agreed to by GRDA and resolved prior to the Informational Filing, those changes will be reported in the Informational Filing, and will be reflected in the Annual Rate Update for the following Rate Year.

VI. Formal Challenge Procedures.

a. Filing Formal Challenges. Formal Challenges must be filed with FERC, either in the FERC Docket assigned to the Informational Filing or via Section 206 of the Federal Power Act, and must name SPP as the respondent to any such action due to GRDA's jurisdictional status pursuant to section 201(f) of the Federal Power Act. Parties filing a formal challenge may provide service to GRDA by electronic mail in accordance with § 385.2010(f)(3), by facsimile, express delivery or messenger to the individual listed as the contact person in GRDA's Informational Filing. For the avoidance of doubt, the challenge procedures available under these Protocols are distinct from, and in addition to any applicable remedies that a party may have against SPP pursuant to section 206 of the Federal Power Act.

b. Requirements for Formal Challenges. Formal Challenges must:

i. Name SPP as the respondent to any action initiated under FPA Section 206;

ii. Clearly identify the action or inaction which is alleged to violate the filed Formula Rate or Protocols;

iii. Explain how the action or inaction violates the filed Formula Rate or Protocols;

iv. Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

v. State whether the issues presented are pending in an existing proceeding in any forum in which the Interested Party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

vi. State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that belief;

vii. Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the Interested Party, including, but not limited to, contracts and affidavits;

viii. State whether the filing party utilized the Informal Challenge procedures described in these Protocols with regard to any issue; and

ix. Set forth the business, commercial, economic or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

1. the extent or effect of an accounting change;

2. whether the Annual Update fails to include data properly recorded in accordance with the Protocols and the accuracy and consistency of data;

3. the proper application of the Formula Rate and procedures in these Protocols;

4. the prudence of actual costs and expenditures, including information on procurement methods and cost control methodologies;

5. the effect of any change to the underlying Uniform System of Accounts or Formula Rate template; or

6. any other information that may reasonably have a substantive effect on the calculation of the charges pursuant to the Formula Rate.

VII. Modification of Formula Rate.

a. No Modification of Formula Rate via Challenge Procedures. No party shall seek to modify the Formula Rate under the Challenge procedures (either Formal or Informal) set forth in these Protocols and the Annual Update shall not be subject to challenge for the purpose of modifying the Formula Rate.

b. Section 205 or 206 Filing Directed at SPP. A change to the Formula Rate fixed inputs related to rate of return on equity ("ROE"), depreciation rates, capital structure, amortization periods, and any ROE incentives for SPP regional projects may not be made absent the appropriate SPP filing with FERC pursuant to the Federal Power Act Sections 205 or 206.

c. Correction of Mistakes. If GRDA makes a correction to errors or omissions regarding the values inputted into the Formula Rate template ("Mistake"), such as arithmetic or computational errors in its financial information during a Rate Year that would affect the Formula Rate for that Rate Year, such corrections and any resulting refunds or surcharges shall be reflected in the Annual Update for the next effective Rate Year with interest computed in

accordance with the SPP Tariff. Mistakes shall not include matters involving exercise of judgment or substantive differences of opinion regarding the derivation of an input that is more properly the subject of the annual review process.

d. Timing of Changes to Formula Rate Inputs. Any changes to the data inputs or as the result of a FERC proceeding shall be incorporated into the Formula Rate and the charges produced by the Formula Rate in the Annual Update for the next effective Rate Year. Any interest on any refund shall be calculated in accordance with the SPP Tariff.

VIII. Informational Filing

a. Submission of Informational Filing. By August 1 of each year, GRDA shall submit to the Commission an informational filing ("Informational Filing") regarding GRDA's Annual Update. The Informational Filling will be for administrative and informational purposes only, and will not submit GRDA to the jurisdiction of the Commission under the Federal Power Act. The Informational Filing will include information that is reasonably necessary to determine:

i. that the input data under the Formula Rate is properly recorded in any underlying workpapers;

ii. that GRDA has properly applied the Formula Rate and these procedures;

iii. the accuracy of the data and the consistency with the Formula Rate of the ATRR and rates under review; and

iv. the extent of accounting changes that affect Formula Rate inputs.

b. Contents of Informational Filing. The Informational Filing will also describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures.

c. Publication of Informational Filing. Contemporaneous with the making of such Informational Filing (or, if not contemporaneous, without unreasonable delay), GRDA will provide notice of the Informational Filing to Interested Parties in the manner described in Section II(c) above.

IX. Joint SPP Transmission Owners' Meeting. If the SPP Transmission Owners with transmission projects that utilize a regional cost-sharing methodology implement a process to coordinate and hold joint meetings, GRDA will participate in that process.

Example GRDA Schedule:

| | Date | Days Since Initial Posting |
|---|---|---|
| Initial Posting | May 15 | |
| Annual Meeting, Interested Parties | May 25 - June 4 | 10-20 |
| Interested Parties Review Period | May 15 – July 14 | 0-60 |
| Final Informal Challenges Due | July 15 | 61 |
| Informational Filing | August 1 | 78 |
| Rate Year | August 1 – July 31 | |

The foregoing schedule is for illustrative purposes only, and is not intended to modify the filing or other dates outlined in these Protocols.

X. Cost Allocation Methodologies Among Affiliates and Following Reorganization or Merger. GRDA is a governmental agency of the State of Oklahoma. Okla. Stat. tit. 82, § 861 *et seq*. According to the Oklahoma Constitution, GRDA cannot "become an owner or stockholder in . . . any company, association, or corporation." Okla. Const. Art. X, § 15(A). As such, GRDA has no affiliates, and does not engage in mergers. Nevertheless, if (upon a future change in Oklahoma law) GRDA engages with affiliates, and/or participates in reorganizations, or mergers, GRDA will allocate costs related to its Formula Rate in a manner that is consistent with the then-current Commission regulations.

## Notes

A Electric portion only

B Exclude Construction Work In Progress.

C Transmission Portion Only

D Removed 100% .

E Transmission lines leased from others. Midwest does not lease transmission lines from other entities.

F The Equity Cost set in Docket No. ER17-469 shall remain fixed and may not change absent FERC approval pursuant to Section 205 or 206 filing. Any change to the total equity cost set in Docket No. ER17-469 and identified on line 92 (e.g. base ROE, incentive adders) cannot occur absent such approval..

G Average aggregated firm demand during each of the 12 calendar-month peak demand hours (i.e., "12 CP") for Network and Point to Point transactions of over one year on the Company's transmission system.

H Amount of transmission plant excluded from rates, includes investment that does not pass the FERC tests for functionalization as transmission plant. Midwest Energy details specific segments of line in Attachment 3.

I Midwest Energy Records assessments by SPP less revenues from SPP in account 555 (i.e. debit and credits) . The amounts offset each other completely. However, SPP also adds its administrative fees thereby making a net expense charged to 555. This administrative fee is recovered through the ECA mechanism and therefore should not be included as part of the TFR.
MWE does not record anything in account 565. ="Account 566 is the account where NERC and FERC assessments are charged and are included in Transmission O&M expense (line 56)."

J Removed 100%.

K PER SA in FERC Docket No. ER17-469: $0 for TY2015 and for TY2016; beginning with the TY2017, this will reflect the account 561 charges to be removed from the Transmission O&M - instead, these charges will be recovered through Schedule 1 ATRR on page 18 (tab "8-Sched 1 RevRe1").

[1] Per SA in FERC Docket No. ER17-469:

For TY2015 and TY2016, Schedule 1 PTP Revenue paid by SPP is to be included in revenue credits to be applied against Adjusted Gross Revenue Requirement, since

Account 561 charges are still included in the ATRR;

Beginning with TY2017, Schedule 1 PTP revenues will be credited against a Sched 1 RevReq on Page 18, Line 4 ( tab "8 - Schedule 1 Revenue Requirement" tab).

[1] Based on 2017 Depreciation Study. The depreciation and amortization rates are fixed and will not change absent FERC approval.

[2] Distribution Plant depreciation rates are not used in calculating the TFR Depreciation Expense. They are indirectly included in the Net Plant allocator
where denominator contains total net plant, including distribution net plant, which reflects total distribution plant less accumulated depreciation on distribution plant.

A. More lines may be added as needed.
B. Rate Year in which the original amount affected the ATRR and rates paid by customers.

B. Each ATRR adjustment shall include interest calculated pursuant to Section 35.19a of the FERC's Regulations (18 C.F.R.).
C. The interest calculation may need to be modified to recognize the implementation during a partial year.
D. The reconciled value will be incorporated into the “1 – Appendix A” with the appropriate footnote explaining the reconciliation.

# Midwest Energy, Inc.
# Transmission Formula Rate
# Protocols

## Section 1, Definitions

**Annual Publication and Posting Date** shall mean the date on which the event listed in Section 3.A(iii) occurs for each year.

**Annual Transmission Revenue Requirement (ATRR)** means the amount of revenue the Company must recover annually to recover costs associated with its transmission system, as calculated in its Transmission Formula Rate. ATRR is the same as Net Zonal Revenue Requirement.

**Annual Update** shall mean Midwest Energy's re-calculation of its ATRR and Network Service rates pursuant to its Formula Rate and these Protocols for the upcoming Rate Year.

**Business Day** means any day other than a Saturday, Sunday or day on which the FERC is not open for business.

**Company** means Midwest Energy, Inc.

**Customer Meeting** shall mean a meeting convened by Midwest Energy at Midwest Energy corporate headquarters in Hays, KS, for Zonal Transmission Customers as well as any other Interested Party that wishes to attend, as is more fully described in Section3.D(i). Such meeting shall include video conferencing, a webinar, or an internet conference.

**Discovery Period** means a one hundred twenty (120) day period after the Annual Publication and Posting Date for an Interested Party to serve reasonable information requests on Midwest Energy, unless such period is extended with the written consent of Midwest Energy.

**Formal Challenge** shall mean a challenge to the Informational Filing with FERC made by an Interested Party no later than twenty-one (21) days after the submission of the Informational Filing.

**FERC** shall mean the Federal Energy Regulatory Commission or its successor, which is the regulatory entity that has jurisdiction over SPP's Open Access Transmission Tariff (SPP Tariff).

**Formula Rate (or Transmission Formula Rate)** means the mechanism to calculate by formula the ATRR and resulting wholesale rates as directed in the blank Addendum 14 to Attachment H of the SPP Tariff and conducted in the Company's populated Transmission Formula Rate, Sheet 1-20.

**Informational Filing** means the submittal of Midwest Energy's Annual Update to the FERC as described in Section 5 of these Protocols.

**Initial Challenge** shall mean a challenge made by an Interested Party within one hundred fifty (150) days, after the Annual Publication and Posting Date, unless this period is extended by the written consent of the Company. An Initial Challenge shall be made in writing, including via electronic communication, to the Company and shall specify the challenge, including those pertaining to Material Accounting Changes, over how Midwest Energy applied the Formula Rate.

**Interest** means interest computed consistent with the FERC rules in 18 C.F.R. § 35.19a, as in effect from time to time.

**Interested Parties** includes, but is not limited to, (i) customers under the SPP Tariff; (ii) any state utility commission that has jurisdiction over the rates of the customers that are allocated costs of the Company's facilities; (iii) any consumer advocates who represent customers that are allocated costs of the Company's facilities; and (iv) state attorneys general.

**Issue** means a question raised by an Interested Party with respect to an Annual Update. A challenge to the Formula Rate itself is not an Issue.

**KCC** shall mean the State Corporation Commission of the State of Kansas.

**Material Accounting Change** shall mean a material change in Midwest Energy's accounting policies and procedures from those in effect for the calendar year upon which the immediately preceding Annual Update was based.

**Midwest Energy** means Midwest Energy, Inc.

**NERC** means the North American Electric Reliability Corporation.

**NERC Standards** means the reliability and critical infrastructure protection standards promulgated in accordance with Section 1211 of the Energy Policy Act of 2005, Section 215 of the Federal Power Act, 16 U.S.C. 824o, as in effect from time to time.

**Rate Year** means services rendered to the Company's wholesale customers on and after September 1 of a given calendar year through August 31 of the subsequent calendar year.

**Resolution Period** means the twenty-one (21) day period following the Review Period to resolve an Initial Challenge, unless such twenty-one day period is extended by the written consent of the Company.

**Review Period** means the one hundred fifty (150) day period following the Annual Publication and Posting Date, for Interested Parties to review the calculations and notify Midwest Energy of any specific challenges, including those related to Material Accounting Changes, over how Midwest Energy applied the Formula Rate, unless the Company extends the one hundred fifty day period by written consent.

**SPP** means the Southwest Power Pool, Inc., or its successor.

**Zonal Transmission Customers** means any person that is or has applied to become an SPP transmission customer whose service is all or partly in the Midwest Energy Zone.

**Section 2, Annual Update**

A. The Annual Update for the Rate Year:

(i) shall be based upon data included in Midwest Energy's independently-audited, certified FERC Form No. 1 for the most recent calendar year, as specified in the Formula Rate, and Midwest Energy's independently-audited, certified books and records, consistent with FERC accounting policies;

(ii) shall provide supporting documentation for data used in the Formula Rate, but not otherwise available in the FERC Form No. 1, as specified in the Formula Rate;[1]

(iii) shall include an identification of (a) any changes in Midwest Energy accounting policies, practices, and procedures (including changes resulting from revisions to FERC's Uniform System of Accounts and/or Form No. 1 reporting requirements) from those in effect during the calendar year upon which the most recent ATRR was based and that, in Midwest Energy's reasonable judgment, could impact the Formula Rate or the calculations under the Formula Rate within the next year, and (b) any changes in the SPP Tariff from the provisions of the SPP Tariff in effect during the calendar year upon which the most recent ATRR was based and that, in Midwest Energy's reasonable judgment, could impact the Formula Rate within the next year;

(iv) shall be subject to challenge limited to whether the Formula Rate, including treatment of Material Accounting Changes, has been applied appropriately under its terms and these Protocols;

(v) shall not seek to modify the Formula Rate and shall not be subject to challenge by any party seeking to modify the Formula Rate, including modification of (a) the most recently approved rate of return on equity (b) depreciation and amortization rates, and (c) "Post-Employment Benefits other than Pension" under Statement of Financial Accounting Standards No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions (PBOP) charges;

(vi) shall include a change analysis of, at minimum, revenue requirement components of rate base, operating and maintenance expenses, depreciation expense, taxes, return on rate base, and revenue credits as compared to the corresponding components in the revenue requirement that was calculated for the prior rate year with an explanation of any material changes (increase over 10 percent and over $100,000 from the previous year for each of the listed revenue requirement components); and

(vii) to the extent that payment of a fine or penalty for violation or alleged violation of NERC Standards has been made on or after January 1, 2015, and the amount is included in the Formula Rate, shall include a description of the violation, the enforcement proceeding, and the basis for seeking recovery of such violation in rates.

B. Formula Rate inputs for (i) rate of return on patronage capital, (ii) depreciation and amortization rates, and (iii) PBOP under Statement of Financial Accounting Standards No. 106, Employers' Accounting for PBOP charges shall be fixed, stated values to be used in the rate formula until changed under authority of the FERC; provided, however, that despite the previous limitation, periodic updates to the depreciation rates used in the formula, while still subject to the formal review by the FERC and the affected parties in a docketed separate proceeding prior to application, will not cause the re-opening of the entire formula.

---

[1] It is the intent of the Formula Rate, including the supporting explanations and allocations described therein, that each input to the Formula Rate will be either taken directly from the FERC Form No. 1 or reconciled to the FERC Form No. 1 by the application of clearly identified and supported information. Where any reconciliation is provided through a worksheet included in the filed Formula Rate template, the inputs to the worksheet must meet this transparency standard, and doing so will satisfy this transparency requirement for the amounts that are output from the worksheet and input to the main body of the Formula Rate. Worksheets will be clearly labeled to direct the reviewer to the applicable support portion of the worksheet.

**Section 3, Review of Midwest Energy's Annual Update**

A. On or before May 10 of each year, Midwest Energy shall:

(i) Recalculate its ATRR and Network Service Rates, producing the "Annual Update" discussed in Section 2 above for the upcoming Rate Year;

(ii) Prepare for posting an Annual Update. The Annual Update shall include a workable data-populated Formula Rate template with all cell formulas functional, containing the supporting workpapers of the appropriate data to calculate the Annual Update for the upcoming Rate Year.

(iii) Post, or cause to be posted, the Annual Update on SPP's OASIS website; and

(iv) Notify its Zonal Transmission Customers and the KCC's designated staff, via e-mail to the most recent e-mail addresses provided to Midwest Energy, of the website address of the Annual Update posting, and e-mail, phone and street address contact information for corresponding with the appropriate Company representative(s) to answer related questions.

B. If the date for making the Annual Update posting should fall on a weekend, or a FERC-recognized holiday, then the posting and filing shall be due on the next Business Day.

C. Upon written request for a particular year's Annual Update by any Interested Party, Midwest Energy will promptly make available to such entity and/or a consultant designated by it, an Excel file, with all formulas functional, containing that year's Annual Update data.

D. Each Annual Update shall be subject to the following review procedures and timeline (if any of the dates provided for herein do not fall on a Business Day, then the due date shall be the first Business Day thereafter):

(i) Each year, Midwest Energy will, with at least thirty (30) calendar days' notice, convene a Customer Meeting no sooner than ten (10) Business Days after the filing date of the Annual Publication and Posting Date, and no later than June 16 to discuss the Annual Update. Midwest Energy will provide notice on the SPP OASIS website of the time, date, and meeting arrangements. The open meeting will be hosted by Midwest Energy and may be conducted via video conferencing, webinar, internet conferencing, phone conferencing, in person meeting, or other similar options. Midwest Energy shall provide remote access for Interested Parties to participate in the meeting. The Customer Meeting shall (a) permit Midwest Energy to explain and clarify its Annual Update and (b) provide Interested Parties an opportunity to seek information and clarifications from Midwest Energy about the Annual Update.

(ii) Interested Parties shall have a Discovery Period ending one hundred twenty (120) calendar days after the Annual Publication and Posting Date to serve reasonable information requests on Midwest Energy. Information requests shall be limited to what is necessary to determine if Midwest Energy has properly applied the Formula Rate and whether the calculated

rates are just and reasonable. In addition, information requests may only solicit information concerning data inputs to the Formula Rate template. Midwest Energy shall post on the SPP OASIS website all information requests from Interested Parties and Midwest Energy's response(s) to such requests; except, if responses to requests include material deemed by Midwest Energy to be confidential, such responses will be made available to requesting parties pursuant to a confidentiality agreement to be executed by Midwest Energy and requesting party.

(iii) Midwest Energy shall make a good faith effort to respond to information requests pertaining to the Annual Update within ten (10) Business Days of receipt of such requests.

(iv) Interested Parties shall have a Review Period ending one hundred fifty (150) calendar days after the Annual Publication and Posting Date (unless Midwest Energy extends the period under written consent) to review the calculations and to notify Midwest Energy in writing, including via electronic communication, of any specific challenges, including those related to Material Accounting Changes, over how Midwest Energy applied the Formula Rate.

(v) If an Initial Challenge has been made by any Interested Party(ies) during the Review Period, then Midwest Energy and the party(ies) have up to 21 calendar days after the Review Period to resolve the Initial Challenge (Resolution Period) (unless Midwest Energy extends the Resolution Period under written consent).

**Section 4, Contents of Informational Filings at FERC**

A. By November 15 of the year of the posting of the Annual Update on SPP's OASIS and the subsequent Discovery and Review Periods as described in Section 3 of these Protocols, Midwest Energy or the SPP shall submit an Informational Filing to FERC.

B. Midwest Energy shall post, or cause to be posted, the Informational Filing onto SPP's OASIS website. Midwest Energy shall also notify its Zonal Transmission Customers and the KCC's designated Staff, via e-mail to the most recent e-mail addresses provided to Midwest Energy, of the website address of the Informational Filing.

C. The Informational Filing must include the information that is reasonably necessary to determine: (1) the input data under the Formula Rate are properly recorded in any underlying workpapers; (2) that Midwest Energy has properly applied the Formula Rate and these Protocols; (3) the accuracy of data and the consistency with the Formula Rate of the ATRR and rates under review; and (4) the extent of accounting changes that affect Formula Rate inputs. The

Informational Filing must also describe any corrections or adjustments made and must describe all aspects of the Formula Rate or its inputs that are the subject of an ongoing dispute under the Initial Challenge procedures.

D. Any changes to the data inputs, including but not limited to revisions to Midwest Energy's FERC Form No. 1, or as the result of any FERC proceeding to consider the Annual Update, or as a result of these Protocols, shall detail how the reconciliation is calculated, as well as how associated interest is calculated. The reconciled value will be incorporated into "1-Appendix A" and the charges produced by the Formula Rate, with the appropriate footnote explaining the reconciliation. Interest shall be computed pursuant to 18 C.F.R. § 35.19a. The impact of the change (as well as the associated interest) will be reflected in Midwest Energy's calculated revenue requirement during the next possible Annual Update following the specific change.

**Section 5, Formal Challenges**

A. A Formal Challenge must be filed within 21 days of the filing of the Informational Filing. An Interested Party may not pursue a Formal Challenge if that party did not submit an Initial Challenge on at least one issue. Having submitted an Initial Challenge on at least one issue, an Interested Party may pursue a Formal Challenge on other issues.

B. A Formal Challenge shall:

(i) Clearly identify the action or inaction which is alleged to violate the Formula Rate, explain the alleged violation, and make a good faith effort to quantify the financial impact or burden (if any) on the filing party as a result of the alleged violation;

(ii) State whether the issues presented are pending in an existing FERC proceeding or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(iii) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(iv) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(v) State whether the filing party utilized the Initial Challenge procedures above to dispute the alleged violation raised by the Formal Challenge, and, if not, describe why not.

C. The party filing the Formal Challenge must serve a copy of it on Midwest Energy via email simultaneous with filing at FERC. Simultaneous service can be accomplished by electronic mail in accordance with 18 C.F.R. § 385.2010(f)(3).

D. In addition to any challenges brought before the FERC through the Formal Challenge procedures, any challenges to SPP's implementation of Midwest Energy's Formula Rate may be made in a separate Section 206 complaint proceeding before FERC.

E. In any proceeding concerning FERC review of the filing of Midwest Energy's Annual Update, or in response to a Formal Challenge, Midwest Energy shall bear the burden of demonstrating that: (1) SPP's pass-through of Midwest Energy's ATRR in FERC-jurisdictional rates does not result in FERC-jurisdictional rates that are unjust and unreasonable rates; (2) it correctly applied the terms of the Formula Rate consistent with these Protocols; and (3) it followed the applicable requirements and procedures in these Protocols. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

**SUPPORTING CALCULATIONS AND NOTES**

Formula Rate - Non-Levelized

Rate Formula Template

Utilizing FERC Form 1 Data

For the 12 months ended 12/31/____

**Prairie Wind Transmission, LLC**

Page 5

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)

References to data from FERC Form 1 are indicated as: #.y.x (page, line, column)

Note Letter

A The balances in Accounts 190, 281, 282 and 283, as adjusted by any amounts in contra accounts identified as regulatory assets

or liabilities related to FASB 106 or 109 and prorated in accordance with IRS regulations. Balance of Account 255 is reduced by prior flow throughs and excluded if the utility

chose to utilize amortization of tax credits against taxable income as discussed in Note F. Account 281 is not allocated.

B Identified in Form 1 as being only transmission related.

C Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission

Prepayments are the electric related prepayments booked to Account No. 165 and reported on Pages 110-111 line 57 in the Form 1.

D Line 45 removes EPRI Annual Membership Dues listed in Form 1 at 353.f, any EPRI Lobbying expenses included in line 44 and all Regulatory

Commission Expenses itemized at 351.h

Line 45 removes all advertising included in Account 930.1, except safety, education or out-reach related advertising

Line 45 removes EEI and EPRI research, development and demonstration expenses associated with projects in which transmission customers can voluntarily participate

to the extent such expenses exceed a maximum annual aggregate amount of $100,000

Line 46 reflects all Regulatory Commission Expenses directly related to transmission service, RTO filings, or transmission siting itemized at 351.h

E Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year.

Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template,

since they are recovered elsewhere.

F The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p =

"the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a

work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that

elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce

rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f)

multiplied by (1/1-T) .

| | | | |
|---|---|---|---|
| Inputs Required: | FIT = | | |
| | | - | |
| | SIT= | | (State Income Tax Rate or |
| | | - | Composite SIT from Attachment 3) |
| | p = | | (percent of federal income |
| | | - | tax deductible for state purposes) |

For each Rate Year (including both Annual Projections and True-Up Adjustments) the statutory income tax rates utilized in the Formula Rate shall reflect the weighted average rates

actually in effect during the Rate Year. For example, if the statutory tax rate is 10% from January 1 through June 30, and 5% from July 1 through December 31, such rates would be weighted

181/365 and 184/365, respectively, for a non-leap year.

G The cost of debt is determined using the internal rate of return methodology shown on Attachment 5 until the Actual Capital Structure Date, and is determined using the methodology

in Attachment 3 thereafter. Attachment 5 contains a hypothetical example of the internal rate of return methodology; the methodology will be applied to actual amounts for use in Appendix A.

H Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation

step-up facilities, which are deemed to included in OATT ancillary services. For these purposes, generation step-up

facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down.

I Enter dollar amounts

J ROE will be supported in the original filing and no change in ROE may be made absent a filing with FERC.

The capital structure will be 50% equity and 50% debt until the earlier of (i) the date that the permanent financing arrangements for the facilities for which FERC approved incentives for Prairie Wind in Docket No. ER09-36-000 ("Project") is in place or (ii) the date that the Project is complete and placed into service ("Actual Capital Structure Date"), after which time the capital structure will be the year-end capital structure. During the year in which the Actual Capital Structure Date occurs, the capital structure will be determined based on the weighted average of the 50/50 capital structure and the actual year-end capital structure, determined as follows: the year-end capital structure will be weighted based on the number of days from the Actual Capital Structure Date until the end of the year, divided by number of day in the year; and the 50/50 capital structure will be weighted based on the number of days in the year prior to the Actual Capital Structure Date divided by the number of days in the year.

For example: Weighted Equity =
[50%*260+60%*(365-260)]/365

After the Actual Capital Structure Date, if the formula produces an equity ratio exceeding 60%, the formulaic value at Line 95

shall be manually set to 60% and the formulaic value at Line 93 shall be manually set to 40% less the percentage shown at Line 94.

K Unamortized Abandoned Plant and Amortization of Abandoned Plant will be zero until the Commission accepts or approves recovery of the cost of abandoned plant. Prairie Wind must submit a Section 205 filing to recover the cost of abandoned plant. Any such filing to recover the cost of an abandoned plant item shall be made no later than 730 days after the date that Prairie Wind formally declares such plant item abandoned.

L Land held for future use will be included in rate base in accordance with the instructions to Account 105. The Formula Rate template will include recognition of

gains and losses for disposition of property recorded in Account 105 – See instruction D of Account 105, with reference to amounts recorded in Accounts 411.6/411.7 or 256/187.

Gains are entered as negative numbers and losses entered as positive numbers.

M Includes the amortization of any excess/deficient income taxes resulting from changes to income tax rates (including changes in apportionment) and other actions take by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/1-T).

| 13 | Line 11 plus line 12 | | - |
| 14 | Line 9 less line 13 | | - |

Note 1 All revenues booked to Account 454 that are derived from cost items classified as transmission-related will be included as a revenue credit. All revenues booked to Account 456 that are derived from cost items classified as transmission-related, and are not derived from rates under this transmission formula rate will be included as a revenue credit. Work papers will be included to properly classify revenues booked to these accounts to the transmission function. A breakdown of all Account 454 revenues by subaccount will be provided below, and will be used to derive the proper calculation of revenue credits. A breakdown of all Account 456 revenues by subaccount and customer will be provided and tabulated below, and will be used to develop the proper calculation of revenue credits.

Note 2 If the facilities associated with the revenues are not included in the formula, the revenue is shown below, but not included in the total above and explained in the Attachment 3.

Note 3 This ratemaking treatment is for the following specified secondary uses of transmission assets: (1) right-of-way leases and leases for space on transmission facilities for telecommunications; (2) transmission tower licenses for wireless antennas; (3) right-of-way property leases for farming, grazing or nurseries; (4) licenses of intellectual property (including a portable oil degasification process and scheduling software); and (5) transmission maintenance and consulting services (including energized circuit maintenance, high-voltage substation maintenance, safety training, transformer oil testing, and circuit breaker testing) to other utilities and large customers (collectively, products). Company will retain 50% of net revenues consistent with *Pacific Gas and Electric Company*, 90 FERC ¶ 61,314; provided, that Company's retention of such revenues is subject to change pursuant to Section II.F of the Settlement Terms. Note: in order to use lines 7 & 9-14, the utility must track in separate subaccounts the revenues and costs associated with each secondary use (except for the cost of the associated income taxes).

Note 4 All Account 454 and 456 Revenues must be itemized below

Note 5 The Formula Rate will provide that, in the event that Prairie Wind receives revenues associated with the secondary use of transmission assets, Prairie Wind may propose to share revenues between customers and shareholders and incorporate such proposal in the Annual Update or True-Up; provided, that Intervenors may challenge Prairie Wind's proposed sharing of revenues at any time either in connection with an Annual Update in which this practice first occurs or pursuant to Section 206. Prairie Wind may oppose Intervenors' challenge. In the event Intervenors present such a challenge, the sharing of such revenues shall be determined in accordance with applicable Commission precedent and regulations, and neither Prairie Wind nor Intervenors may argue that the Formula presumes any particular sharing mechanism is just and reasonable or is not just and reasonable, or that any sharing of certain sources of revenues is appropriate at all.

The Formula Rate shall include a credit to rate base for all funded and unfunded reserves (*i.e.*, those for which the funds collected have not been set aside in escrow and the earnings

thereon included in the reserve fund) that are funded by customers and for which the associated accrued costs are recoverable under the Formula Rate. Prairie Wind will include a spreadsheet

(to be included in the Formula Rate template) each year as part of the Annual Update that lists the reserves and indicates which ones meet the test for crediting to rate base.

| 160 | November | - | - | - | - | - |
| 161 | December | - | - | - | - | - |
| 162 | Average | | - | - | - | - |

Debt is equal to 112.18c less 112.19c plus 112.20c plus 112.21c, recognizing that 112.19c is entered into the Form 1 as a negative number and shall remain negative (i.e., it is not a double minus in the formula that mathematically would lead to adding in line 112.19c) so that Reacquired Bonds (Account 222) are subtracted from other long term debt outstanding and that Line 112.20c may contain both short term and long term indebtedness to affiliates and therefore any short term affiliate debt shall be removed from 112.20c before adding it into the above long term debt balance formula in the formula rate.

Preferred Stock is equal to 112.3c less any Preferred Treasury Stock plus any Preferred Additional Paid-in-Capital, recognizing that if there is any Preferred Treasury Stock or Preferred Additional Paid-in-Capital, then the respective amounts shall be appropriately disclosed in a footnote to the capital structure cost support in the formula rate template.

Common Equity is equal to 112.16c less 112.3c less 112.12c less 112.15c, recognizing that line 112.15c may be a positive or negative number and if it is positive, it shall be subtracted in the formula, and if it is entered as a negative in the Form 1, it shall be added (a double minus sign when subtracting a negative number) in the formula.

The cost of long-term debt for a Rate Year will be the sum of the interest expense and cost of issuances divided by the 13-month average long-term debt balance for the Rate Year. The cost of long-term debt issuances shall include long-term interest expense amounts recorded in the following FERC accounts:

| | | | | Amount |
|---|---|---|---|---|
| 163 | | Account 427 | Interest on Long-Term Debt (limited solely to interest expense for long-term debt reported in Accounts 221-224) (FF1, 117/62/c) | - |
| 164 | plus: | Account 428 | Amortization of Debt Discount and Expense (FF1, 117/63/c) | - |
| 165 | plus: | Account 428.1 | Amortization of Loss on Reacquired Debt (FF1, 117/64/c) | - |
| 166 | less: | Account 429 | Amortization of Premium on Debt (FF1, 117/65/c) | - |
| 167 | less: | Account 429.1 | Amortization of Gain on Reacquired Debt (FF1, 117/66/c) | - |
| 168 | plus**:** | Account 430 | Interest on Debt to Associated Companies but limited solely to the expense associated with long-term debt recorded in Account 223. | - |

| | | |
|---|---|---|
| 169 | Total | - |

Interest expenses not directly related to the long-term bond issuances included in the capital structure will be excluded.

The cost of preferred stock will be preferred stock dividends (booked in FERC Account 437) divided by the average preferred stock balance for the rate year.

| | | |
|---|---|---|
| 170 | Preferred Dividends in Account 437 | - |
| 171 | 13 Month average balance of Preferred Stock | - |
| 172 | Cost of Preferred Stock | - |

| 186 | Interest rate for Long-Term Debt input to Appendix A line 93 after contruction phase | (Line 184 / Line 185) | - |

Interest Rate Hedging on Long Term Debt – The cost rates for long-term debt for Prairie Wind shall include the annual amortization of gains and losses resulting from interest rate hedging; provided that the net cost

(or cost reduction due to net gains) shall be limited in True Up calculations so as not to exceed 6 basis points in the weighted average cost of capital. To determine the includable hedging costs or gains, Prairie Wind

will multiply the total 3-component capitalization (LTD, PS and CS) by 0.0006, and compare the result to the hedging cost or gain amount amortized in the year.

**Attachment 5 - Financing Costs for Long Term Debt using the Internal Rate of Return Methodology**

Prairie Wind Transmission, LLC

HYPOTHETICAL EXAMPLE

Assumes financing will be a 5 year loan with Origination Fees of $6.6 million and a Commitments Fee of 0.375% on the undrawn principal.

Consistent with GAAP, the Origination Fees and Commitments Fees will be amortized using the standard Internal Rate of

Return formula below.

Each year, the amounts withdrawn, the interest paid in the year, Origination Fees, Commitments Fees, and total loan amount will be updated on this attachment.

The IRR calculation will use the Excel Worksheet Function XIRR.

| | |
|---|---|
| **Total Loan Amount** | **$ 300,000,000** |
| **Internal Rate of Return[1]** | **9.631%** |

**Based on following Financial Formula[2]:**

**NPV = 0 =** $$\sum_{t=1}^{N} C_t/(1+IRR)pwr(t)$$

| | |
|---|---|

1 The IRR is the Debt Cost shown on Line 93 of Appendix A.

[2] The IRR is a discount rate that makes the net present value of a series of cash flows equal to zero. The IRR equation can only be solved

through iterations performed by a computer program (i.e., NPV function with goal seek in a spreadsheet program).

Instructions for Account 190:

1. ADIT items related only to Non-Electric Operations (e.g., Gas, Water, Sewer) or Production are directly assigned to Column C

2. ADIT items related only to Transmission are directly assigned to Column D and E

3. ADIT items related to Plant and not in Columns C & D & E are included in Column F

4. ADIT items related to labor and not in Columns C & D & E are included in Column G

5. Deferred income taxes arise when items are included in taxable income in different periods than they are included in rates, therefore if the item giving rise to the ADIT is not included in the formula, the associated ADIT amount shall be excluded

NOTES

1) Column J is the difference between projected monthly and actual monthly activity (Column I minus Column F). Specifically, if projected and actual activity are both positive, a negative in Column J represents over-projection (amount of projected activity that did not occur) and a positive in Column J represents under-projection (excess of actual activity over projected activity). If projected and actual activity are both negative, a negative in Column J represents under-projection (excess of actual activity over projected activity) and a positive in Column J represents over-projection (amount of projected activity that did not occur).

2) Column K preserves proration when actual monthly and projected monthly activity are either both increases or decreases. Specifically, if Column J is over-projected, enter Column G x [Column I/Column F]. If Column J is under-projected, enter the amount from Column G and complete Column L). In other situations, enter zero.

3) Column L applies when (1) Column J is under-projected AND (2) actual monthly and projected monthly activity are either both increases or decreases. Enter the amount from Column J. In other situations, enter zero.

4) Column M applies when (1) projected monthly activity is an increase while actual monthly activity is a decrease OR (2) projected monthly activity is a decrease while actual monthly activity is an increase. Enter actual monthly activity (Col I). In other situations, enter zero.

5) Column N is computed by adding the prorated monthly activity, if any, from Column K to 50 percent of the portion of monthly activity, if any, from Column L or M to the balance at the end of the prior month. The activity in columns L and M is multiplied by 50 percent to reflect averaging of rate base to the extent that the proration requirement has not been applied to a portion of the monthly activity.

6) Actual monthly activity is computed based on the annual activity for the period, divided by 12 months.

# PRAIRIE WIND TRANSMISSION, LLC
# FORMULA RATE IMPLEMENTATION PROTOCOLS

## Section 1. Annual Projection

a. The formula rate template ("Template") and these Formula Rate Implementation Protocols ("Protocols") together comprise the filed rate ("Formula Rate") of Prairie Wind Transmission, LLC ("Prairie Wind") for transmission service and revenue requirements determination under the Southwest Power Pool ("SPP") OATT. Prairie Wind shall follow the instructions specified in the Formula Rate to calculate annually its Net Revenue Requirement. The Net Revenue Requirement shall be determined from January 1 to December 31 of a given calendar year (the "Rate Year").

b. No later than September 1 of the current Rate Year, Prairie Wind shall determine its projected Net Revenue Requirement (page 1, line 4 of the Template) for the upcoming Rate Year in accordance with Prairie Wind's Formula Rate, incorporating a True-up Adjustment (as determined in Section 2) for the preceding Rate Year ("Annual Projection"), and shall cause an electronic version of the Annual Projection to be posted in both a Portable Document Format and fully-functioning Excel file at a publicly accessible location on SPP's internet website.[1] Such posting shall include (i) all inputs in sufficient detail to identify the components of Prairie Wind's projected Net Revenue Requirement, and (ii) explanations of the bases for the projections and input data. If the date for making such posting should fall on a weekend or a holiday recognized by the Federal Energy Regulatory Commission ("FERC" or "Commission"), then the posting shall be made no later than the next business day. Prairie Wind shall electronically serve each Annual Projection upon the Service List.[2]

---

1. Since the True-up Adjustment is based on the difference between the actual Net Revenue Requirement less the projected Net Revenue Requirement for the prior Rate Year, the initial True-up Adjustment will be determined in the second Rate Year of this rate schedule with respect to the prior Rate Year, and will be added to the projected Net Revenue Requirement for the third Rate Year of this rate schedule.

2. As used in these protocols, "Service List" shall mean (i) the email list of SPP OATT Transmission Customers maintained by the SPP; (ii) any state regulatory agency with rate jurisdiction over a public utility located within the SPP footprint; (iii) any consumer advocate agency authorized by state law to review and contest the rates for any such public utility; and (iv) any signatory to the Settlement Agreement in Docket Nos. ER09-36-000.

c. The Formula Rate shall initially be effective for service and recovery of Prairie Wind's Net Revenue Requirement on and after the effective date specified by the Commission. The Annual Projection, including the True-Up Adjustment, for each Rate Year shall be subject to review, challenge, true-up and refunds or surcharges with interest, to the extent and in the manner provided in these Protocols.

d. Together with the posting of the Annual Projection, Prairie Wind shall cause to be posted on the SPP website the time, date and location for a public meeting with (i) any Eligible Customer under the SPP OATT; (ii) any regulatory agency with rate jurisdiction over a public utility located within the SPP footprint; (iii) any consumer advocate authorized by state law to review and contest the rates for any such public utility, or (iv) any party with standing under Federal Power Act ("FPA") Section 205 or 206 (collectively, "Interested Persons") in order for Prairie Wind to explain its Annual Projection and to provide an opportunity to seek information and clarifications regarding the Annual Projection ("Stakeholder Projections Meeting"). The Stakeholder Projections Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business days after September 1.

e. To the extent Prairie Wind agrees to make changes in the Annual Projection for a given Rate Year, such revised Annual Projection shall be promptly posted, in a similar manner as the initial Annual Projection for that Rate Year. Changes posted prior to November 15 of the preceding Rate Year, or the next business day if November 15 is not a business day, shall be reflected in the charges for the Rate Year; changes posted after that date will be reflected in the True-up Adjustment for the Rate Year. On such date, Prairie Wind shall provide its zonal ATRR to the SPP for the purpose of SPP preparing any necessary tariff filing by no later than December 1.[3] During the construction phase of the facilities for which FERC approved incentives for Prairie Wind in Docket No. ER09-36-000 ("Project"), when the hypothetical capital structure is used, each Annual Projection and True-Up Adjustment shall use actual data in the FERC Form 1, company records (as applicable) and the most recent data on engineering and procurement construction budgets approved by company management. Prairie Wind shall supply with the Annual Projection a copy of any such budgets that have been provided to lenders during the prior twelve month period.

---

3. In the event that the SPP is no longer required to make a tariff filing to reflect Prairie Wind's Zonal ATRR in the SPP OATT, and to the extent consistent with applicable Commission precedent, the November 15 deadline may be delayed or extended, as appropriate, until such later deadline established by the SPP that will facilitate timely billing of the new Zonal ATRR in the subsequent Rate Year.

**Section 2. True-up Adjustment**

The True-up Adjustment shall be the sum of components a and b, determined in the following manner:

a. Prairie Wind's projected Net Revenue Requirement for the previous Rate Year[4] will be compared to Prairie Wind's actual Net Revenue Requirement (page 1, line 4, of the Template) for the previous Rate Year calculated in accordance with Prairie Wind's Formula Rate and based upon (i) Prairie Wind's FERC Form No. 1 for that same Rate Year, (ii) any FERC orders specifically applicable to Prairie Wind's calculation of its annual revenue requirement, (iii) the books and records of Prairie Wind (which shall be maintained consistent with the FERC Uniform System of Accounts ("USoA")), (iv) FERC accounting policies and practices applicable to the calculation of annual revenue requirements under formula rates, and (v) any aspects of the SPP OATT that apply to the calculation of annual revenue requirements under individual transmission owner formula rates, to determine any over- or under-recovery ("True-up Adjustment Over/Under Recovery"). Prairie Wind shall cause the True-Up Adjustment Over/Under Recovery and related supporting calculations and explanations to be posted to a publicly accessible location on SPP's internet website and electronically served on the Service List no later than June 1 following the issuance of the FERC Form No. 1 for the previous Rate Year. Prairie Wind also shall cause to be posted simultaneously at such location an explanation of the True-Up Adjustment Over/Under Recovery and information regarding frequently asked questions. Prairie Wind shall also contemporaneously serve such True-Up Adjustment Over/Under Recovery and explanatory information upon the Service List. Further, Prairie Wind shall make a good faith effort to respond to reasonable information requests regarding the True-Up Adjustment Over/Under Recovery as set forth in Section 4 of these Protocols within fifteen (15) business days of receipt of such requests, including posting and serving such responses in a similar manner as the posting and serving of the True-Up Adjustment Over/Under Recovery.

---

4. Since the initial year of this rate schedule is a partial year, the initial projected Net Revenue Requirement will be divided by the number of months the rate is in effect to calculate the monthly projected cost of service to be collected each month of the first year. Similarly, the actual Net Revenue Requirement will be divided by the number of months the rate is in effect to calculate the actual cost of service to be collected each month of the first year. The first True-up Adjustment will compare the projected Net Revenue Requirement and the actual Net Revenue Requirement for that initial Rate Year.

b. Interest on any True-Up Adjustment Over/Under Recovery of the actual Net Revenue Requirement shall be based on the Commission's interest rate on refunds (18 C.F.R § 35.19a) and calculated in October following the calculation of the actual Net Revenue Requirement.

The interest payable shall be calculated as follows:

(i) The interest rate to be applied to the True-Up Adjustment Over/Under Recovery of the Net Revenue Requirement will be determined using the average refund rate for the twenty (20) months preceding September of the current Rate Year.

(ii) The Annual Projection to be charged for transmission services for the following Rate Year shall be the sum of the Projected Net Revenue Requirement for such Rate Year and the True-up Adjustment (included on page 1, line 3, of the Template) for the previous Rate Year.

**Example for 2012 Net Revenue Requirement**

In September 2011, Prairie Wind will determine the projected Net Revenue Requirement to be charged for 2012. In May 2013, Prairie Wind's projected Net Revenue Requirement for 2012 will be compared to the actual Net Revenue Requirement for 2012 calculated in accordance with the Template using Prairie Wind's 2012 FERC Form No. 1 and its books and records. The interest rate to be applied to any True-Up Adjustment Over/Under Recovery will be the applicable average monthly FERC refund rate specified in Section 2.b. in effect from January 1, 2012 through August 31, 2013. Prairie Wind will post all information relating to the True-up Adjustment Over/Under Recovery for the 2012 actual Net Revenue Requirement no later than June 1, 2013. The True-up Adjustment will be included on page 1, line 3 of the Template in the 2014 projected Net Revenue Requirement to be charged and that will be made available by September 1, 2013. The new revenue requirement will take effect on January 1, 2014.

**Section 3. <u>Annual Updates</u>**

a. On or before June 1 following each Rate Year, Prairie Wind shall calculate its actual Net Revenue Requirement and the True-Up Adjustment Over/Under Recovery as calculated under Section 2.a. ("Annual Update") for such Rate Year, and shall cause such Annual Update to be posted, in both a Portable Document Format and fully-functioning Excel format, at a publicly accessible location on SPP's internet website, and electronically serve it on the Service List. In addition, Prairie Wind shall contemporaneously submit such Annual Update as an informational filing with the FERC. Prairie Wind.

b. If the date for making the Annual Update posting/filing should fall on a weekend or a holiday recognized by the FERC, then the posting/filing shall be due on the next business day.

c. The date on which the last of the events listed in Section 3.a or 3.b occurs shall be that year's "Publication Date."

d. Upon written request from any Interested Person, Prairie Wind will promptly make available to such entity a "workable" Excel file containing the populated Template for that year's Annual Update.

e. Together with the posting of the Annual Update, Prairie Wind shall cause to be posted on the SPP website the time, date and location for a meeting with Interested Persons in order for Prairie Wind to explain its Annual Update and to provide Interested Persons an opportunity to seek information and clarifications regarding the Annual Update ("Stakeholder Meeting"). The Stakeholder Meeting shall be held no less than twenty (20) business days and no more than thirty (30) business days after June 1.

f. The Annual Update for the Rate Year:

(i) Shall be calculated in accordance with Prairie Wind's Formula Rate and based upon Prairie Wind's FERC Form No. 1 data for the most recent calendar year, any FERC orders specifically applicable to Prairie Wind's calculation of its annual revenue requirement, the books and records of Prairie Wind (which shall be maintained in accordance with the USoA), any FERC accounting policies and practices applicable to the calculation of annual revenue requirements under formula rates, and any aspects of the SPP OATT Governing Documents[5] that apply to the calculation of annual revenue requirements under individual transmission owner formula rates.

(ii) Shall provide, via the Formula Rate worksheets, sufficiently detailed supporting documentation for data (and all adjustments thereto or allocations thereof) used in the Formula Rate that are not stated in the FERC Form No. 1;[6]

---

5. SPP OATT Governing Documents include the SPP OATT, Bylaws, Articles, Criteria, and Membership/Seams Agreements.

6. It is the intent of the Formula Rate, including the supporting explanations and allocations described therein, that each input to the Formula Rate will be either taken directly from the FERC Form No. 1 or reconcilable to the FERC Form No. 1 by the application of clearly identified and supported information. If the referenced form is superseded, the successor form(s) shall be utilized and supplemented as necessary to provide equivalent information as that provided in the superseded form. If the referenced form(s) is (are) discontinued, equivalent information as that provided in the discontinued form(s) shall be utilized.

(iii) Shall provide notice of changes in Prairie Wind's accounting policies and practices from those in effect for the calendar year upon which the immediately preceding Annual Update was based that affect the Formula Rate or calculation of the Annual Update ("Accounting Change(s)");

(iv) Shall be subject to review and challenge in accordance with the procedures set forth in Sections 4, 5, and 6 of these Protocols.

(v) Shall be subject to review and challenge in accordance with the procedures set forth in these Protocols with respect to the prudence of any costs and expenditures included for recovery in the Annual Update; provided, however, that nothing in these Protocols is intended to modify the Commission's applicable precedent with respect to the burden of going forward or burden of proof under formula rates in such prudence challenges; and

(vi) Shall not seek to modify the Formula Rate and shall not be subject to challenge by any Interested Person seeking to modify the Formula Rate. *(i.e.,* all modifications to the Formula Rate will require, as applicable, an FPA Section 205 or Section 206 filing or initiation of a Section 206 investigation).

g. The following Formula Rate inputs shall be stated values to be used in the Formula Rate until changed pursuant to an FPA Section 205 or 206 proceeding: (i) rate of return on common equity ("ROE"); (ii) "Post-Employment Benefits other than Pensions" pursuant to Statement of Financial Accounting Standards No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions ("PBOP") charges; (iii) extraordinary property losses; (iv) abandoned plant costs; (v) the depreciation and/or amortization rates as set forth in the notes to the Formula Rate template; (vi) capital leases; and (vii) payments in lieu of taxes.

## Section 4. Annual Review Procedures

Each Annual Update shall be subject to the following review procedures ("Annual Review Procedures"):

a. Interested Persons shall have up to the latest of one hundred fifty (150) calendar days after the Publication Date, thirty (30) calendar days after the receipt of all responses to timely submitted information requests (unless such period is extended with the written consent of Prairie Wind), or thirty (30) calendar days after resolution of a dispute that does not result in the production of additional information, to review the calculations ("Review Period") and to notify Prairie Wind in writing of any specific challenges, including challenges related to Accounting Changes, to the application of the Formula Rate ("Preliminary Challenge"). Prairie Wind shall promptly cause to be posted all Preliminary Challenges at a publicly accessible location on SPP's internet website.

Prairie Wind shall respond in writing to a Preliminary Challenge within twenty (20) business days of receipt, and its response shall notify the challenging party of the extent to which Prairie Wind agrees or disagrees with the challenge. If Prairie Wind disagrees with the Preliminary Challenge, its response shall include supporting documentation. Prairie Wind shall promptly cause to be posted responses to all Preliminary Challenges at a publicly accessible location on SPP's internet website.

b. Interested Persons shall have up to one hundred twenty (120) calendar days after each annual Publication Date (unless such period is extended with the written consent of Prairie Wind) to serve reasonable information requests on Prairie Wind. Information requests shall be limited to what is necessary to determine if Prairie Wind has properly calculated the Annual Update under review (including any corrections pursuant to Section 6), whether the costs included in the Annual Update are properly recordable and recorded, prudently incurred, and otherwise consistent with Prairie Wind's accounting policies, practices and procedures consistent with the USoA, whether the input data used in the Annual Update are accurate and correctly used in the Formula Rate, and whether the Formula Rate has been applied according to its terms, including the procedures in these Protocols. In addition, such information requests shall not solicit information concerning costs or allocations where the costs or allocation methods have been determined to be appropriate by FERC in the context of other Prairie Wind Annual Updates, except that such information requests shall be permitted if they (i) seek to determine if there has been a change in circumstances, or (ii) are in connection with corrections pursuant to Section 6.

c. Prairie Wind shall make a good faith effort to respond to information requests pertaining to the Annual Update within fifteen (15) business days of receipt of such requests.

To the extent Prairie Wind and any Interested Person(s) are unable to resolve disputes related to information requests submitted in accordance with these Annual Review Procedures, Prairie Wind or any Interested Person may petition the FERC to appoint an Administrative Law Judge as a discovery master to resolve the discovery dispute(s) in accordance with these Protocols and consistent with the FERC's discovery rules.

d. Preliminary or Formal Challenges related to Accounting Changes shall be treated in the same manner under these Protocols as other challenges to the Annual Update. Failure to make a Preliminary Challenge with respect to an Accounting Change in an Annual Update shall not act as a bar with respect to that Annual Update nor shall such failure bar a subsequent Preliminary Challenge related to a subsequent Annual Update to the extent such Accounting Change affects the subsequent Annual Update.

e. If a change made by Prairie Wind to its accounting policies, practices or procedures, or the application of the Formula Rate, is found by the FERC to be unjust, unreasonable, and/or unduly discriminatory or preferential, then the calculation of the charges to be assessed during the Rate Year then under review, and the charges to be assessed during any subsequent Rate Years, including any True-up Adjustments, shall not include such change, but shall include any remedy that may be prescribed by FERC in the exercise of its discretion to restore the operation of the Formula Rate as of the effective date, or as such Formula Rate may be subsequently modified by the FERC or through settlement, to ensure that the Formula Rate continues to operate in a manner that is just, reasonable, and not unduly discriminatory or preferential.

**Section 5. Resolution of Challenges**

a. If Prairie Wind and any Interested Person(s) have not resolved any Preliminary Challenge to the Annual Update within sixty (60) calendar days after the end of the Review Period (unless such period is extended with the written consent of Prairie Wind to continue efforts to resolve the Preliminary Challenge), such Interested Person may, within thirty (30) calendar days thereafter, file a challenge with the FERC, pursuant to 18 C.F.R. § 385.206 ("Formal Challenge"), which shall be served on Prairie Wind by electronic service on the date of such filing. However, there shall be no need to make a Formal Challenge or to await conclusion of the time periods in Section 4 if the FERC already has initiated a proceeding to consider the Annual Update. Subject to any applicable confidentiality and CEII restrictions, all information and correspondence produced by Prairie Wind pursuant to these Protocols may be included in any Formal Challenge or in any FERC or appellate proceeding relating to the Formula Rate.

b. Any response by Prairie Wind to a Formal Challenge must be submitted to the FERC within thirty (30) calendar days of the date of the filing of the Formal

Challenge, and shall be served on the filing party(ies) and the Service List by electronic service on the date of such filing.

c. In any proceeding concerning a given year's Annual Update (including corrections) or Accounting Change(s), Prairie Wind shall demonstrate the justness and reasonableness of the rate resulting from its application of the Formula Rate by demonstrating that it has reasonably and accurately calculated the Annual Update and/or reasonably adopted and applied the Accounting Change.

d. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of Prairie Wind to file unilaterally, pursuant to Section 205 of the FPA and the regulations thereunder, an application seeking changes to the Formula Rate or to any of its inputs requiring a Section 205 filing under these Protocols (including, but not limited to, ROE, extraordinary property losses and abandoned plant costs, depreciation and amortization rates, PBOPs, and Transmission Incentive Mechanisms), or the right of any other party or the Commission to seek such changes pursuant to Section 206 of the FPA and the regulations thereunder.

e. These Protocols in no way limit the rights of Prairie Wind or any Interested Person to initiate a proceeding at the FERC at any time with respect to the Formula Rate or any Annual Update consistent with the party's full rights under the Federal Power Act, including without limitation Sections 205, 206 and 306, and the FERC's regulations.

**Section 6. Changes to Annual Informational Filings**

a. If Prairie Wind determines or concedes that corrections to the Annual Update are required, whether under Sections 2 or 3 of these Protocols, including but not limited to those requiring corrections to its FERC Form No. 1, or input data used for a Rate Year that would have affected the Annual Update for that Rate Year, Prairie Wind shall promptly notify the Service List, file a correction to the Annual Update with the FERC as an amended informational filing, and shall cause such information to be posted at a publicly accessible location on SPP's internet website. Such corrections with interest shall be reflected in the next Annual Projection. Interest on any over- or under-recovery due to corrections for preceding True-Up Adjustment Rate Years shall be calculated monthly on such over- or under-recovery from July 1 of the corrected Rate Year through June 30 of the Rate Year in which such over- or under-recovery is reflected ("Correction Period"). The applicable monthly interest rates for the Correction Period for an over-recovery shall be the annual interest rates for each month pursuant to 18 C.F.R. § 35.19a divided by twelve (12) for each month from the beginning of the Correction Period through August 31 of the Rate Year immediately preceding the Rate Year in which such over-recovery is reflected and the last such monthly rate so determined for each month of the remainder of the Correction Period. The applicable monthly interest rates for the Correction Period for an under-recovery shall be the lower of, on a monthly basis, (i) Prairie Wind's short-term debt

monthly interest rate for each month (provided Prairie Wind has short-term debt outstanding during such month) or (ii) the monthly interest rate determined in accordance 18 C.F.R § 35.19a for each month from the beginning of the Correction Period through August 31 of the Rate Year immediately preceding the Rate Year in which such over-recovery is reflected and the last such monthly rate so determined for each month of the remainder of the Correction Period.

b. A corrected posting shall reset the performance dates under Sections 2 and 3 of the Protocols for Interested Person review, and the revised dates shall run from the posting date(s) for each of the corrections. The scope of review shall be limited to the aspects of the Formula Rate affected by the corrections.

**Section 7. <u>Construction Work in Progress</u>**

a. *Accounting.* For each transmission project for which Prairie Wind has been authorized by a Commission order to include 100 percent of Construction Work in Progress ("CWIP") in transmission rate base, Prairie Wind shall use the following accounting procedures to ensure that it does not recover an Allowance for Funds Used During Construction ("AFUDC") for such project.

(i) Prairie Wind shall assign each authorized incentive transmission project a unique Funding Project Number ("FPN") for internal cost tracking purposes.

(ii) Prairie Wind shall record actual construction costs to each FPN through work orders that are coded to correspond to the FPN for each incentive transmission project. Such work orders shall be segregated from work orders for non-incentive transmission projects for which the Commission has not authorized Prairie Wind to include any portion of CWIP in rate base.

(iii) For each incentive transmission project, Prairie Wind shall prepare monthly work order summaries of costs incurred under the associated FPN. These summaries shall show monthly additions to CWIP and plant in service and shall correspond to amounts recorded in Prairie Wind's FERC Form No. 1. Prairie Wind shall use these summaries as data inputs into the Annual Update calculated pursuant to Section 3. Prairie Wind shall make such work order summaries available upon request under the review procedures of Section 4.

(iv) When an incentive transmission project, or portion thereof, is placed into service, Prairie Wind shall deduct from total CWIP the accumulated charges for work orders under the FPN for that project, or portion thereof. The purpose of this control process is to ensure that expenditures are not double counted as both CWIP and as additions to plant.

(v) For non-incentive transmission projects, Prairie Wind shall record AFUDC to be applied to CWIP and capitalized when the project is placed into service.

b. *Annual Reporting.* For each incentive project for which the Commission has authorized Prairie Wind to include any portion of CWIP in transmission rate base, Prairie Wind shall file a report with the Commission at the time of Prairie Wind's Annual Update that shall include the following information concerning each such project:

(i) the actual amount of CWIP recorded for each project;

(ii) any amounts recorded in related FERC accounts or subaccounts, such as AFUDC and regulatory liability;

(iii) the resulting effect of CWIP on the revenue requirement;

(iv) a statement of the current status of each project; and

(v) the estimated in-service date for each project.

tax
SPP Zone | Zone 14 | **F**

## Notes:

**A** Value is sourced from "3 - LTD Interest Cost"

**B** Value is assumed equal to LTD outstanding as the Capital Structure is a Hypothetical 50/50 debt/equity construct.

**C** Value is equal to GLHP approved total return on equity

PILOT = Payment in Lieu of Taxes. Winfield is not subject to property or other local taxes, but makes contributions to the Municipal budget, in lieu of taxes, based on a

**D** percentage of gross revenues that is set by City Council,

Winfield is
exempt from
State and
Federal Income

**E** Taxes.

Winfield assets
Revenue Requirement
are included in SPP

**F** Zone 14

Formula Rate - Non-Levelized

Rate Formula Template Utilizing FERC Form 1 Data
Kansas Power Pool - Winfield

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)
References to data from FERC Form 1 are indicated as: #.y.x (page, line, column)

| Note Letter | |
|---|---|
| A | For 2020, the annualized (Line 11) revenue requirement is 3 times the Line 10 revenue requirement that is based on a 4-month average rate base and expenses for September through December 2020. Annual Updates beginning in 2021 reflect a full-year of costs (13-month average rate base and annual expenses) such that Line 10 and Line 11 are equal. |
| B | The balances in Accounts 190, 281, 282 and 283, as adjusted by any amounts in contra accounts identified as regulatory assets or liabilities related to FASB 106 or 109. Balance of Account 255 is reduced by prior flow throughs and excluded if the utility chose to utilize amortization of tax credits against taxable income. Account 281 is not allocated. |
| C | Identified in Form 1 as being only transmission related. CWIP will remain zero until the Commission approves its inclusion pursuant to an FPA filing. |
| D | Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 3, line 14, column 5 minus amortization of Regulatory Asset at page 3, line 11, column 5. Prepayments are the electric related prepayments booked to Account No. 165 and reported on pages 111, line 57 in the Form 1. |
| E | Page 3, Line 6 - EPRI Annual Membership Dues listed in Form 1 at 353.f, all Regulatory Commission Expenses itemized at 351.h, and non-safety related advertising included in Account 930.1 found at 323.191.b. Page 3, Line 7-Regulatory Commission Expenses directly related to transmission service, ISO filings, or transmission siting itemized at 351.h. |

F Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere.

G The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes" and TEP = "the tax exempt ownership interest". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 3, line 26). Excess Deferred Income Taxes reduce income tax expense by the amount of the expense multiplied by (T/1-T).

| Inputs Required: | | | |
|---|---|---|---|
| | FIT = | 0.00% | |
| | SIT= | 0.00% | (State Income Tax Rate or Composite SIT) |
| | p = | 0.00% | (percent of federal income tax deductible for state purposes) |

H Removes transmission plant determined by Commission order to be state-jurisdictional according to the seven-factor test (until Form 1 balances are adjusted to reflect application of seven-factor test).

I Removes dollar amount of transmission plant to be included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed included in OATT ancillary services. For these purposes, generation step-up facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down.

J Enter dollar amounts

K ROE will be equal to that of GridLiance High Planes and no change in ROE may be made absent a filing pursuant to the FPA with the FERC. The fact that the ROE and cap on the equity portion of the capital structure are currently equal to the ROE and equity cap of GridLiance High Plains does not predetermine or limit the Commission’s review of any filing to change the ROE or capital structure in the future.

L Page 4, Line 28 must equal zero since all short-term power sales must be unbundled and the transmission component reflected in Account No. 456.1.

M Includes income related only to transmission facilities, such as pole attachments, rentals and special use.

N Company will not have any grandfathered agreements. Therefore, this line shall remain zero.

O The revenues credited on page 1 lines 2-6 shall include only the amounts received directly (in the case of grandfathered agreements) or from the ISO (for service under this tariff) reflecting the Transmission Owner's integrated transmission facilities. Revenue Credits do not include revenues associated with FERC annual charges, gross receipts taxes,-facilities not included in this template (e.g., direct assignment facilities and GSUs) the costs of which are not recovered under this Rate Formula Template.

P Reserved

Q The KPP-Winfield average cost of LTD will be derived in Attachement 3 based on the total interest cost for the current year and the outstanding LTD computed as the sum of the Principle to be paid during all years from the current year through the final year of the then existing LTD issuances that is scheduled to retire last .

R Calculate using 13 month average balance, except ADIT which is calculated based on the average of the beginning and the end of the year balances.

S Unamortized Abandoned Plant and Amortization of Abandoned Plant will be zero until the Commission accepts or approves recovery of the cost of abandoned plant. Utility must receive FERC authorization before recovering the cost of abandoned plant.

| | |
|---|---|
| T | Recovery of Regulatory Assets is subject to FERC approval before the amortization of the Regulatory Asset can be included in rates. |
| U | Excludes Asset Retirement Obligation balances |
| V | KPP shall be allowed recovery of Winfield costs related to interest rate locks. Absent a Section 205 filing, Company shall not include in the Formula Rate, the gains, losses, or costs related to other hedges. |
| W | The Tax Effect of Permanent Differences captures the differences in the income taxes due under the Federal and State calculations and the income taxes calculated in Attachment H that are not the result of a timing difference |
| X | Calculate using a simple average of beginning of year and end of year balances reconciling to FERC Form No. 1 by Page, Line and Column as shown in Column 2. |

| | | | | |
|---|---|---|---|---|
| Reserve 4 | | | | |
| … | | | | |
| … | - | - | - | |
| Total | - | | - | |

Notes:

A Recovery of regulatory asset is limited to any regulatory assets authorized by FERC.

B Recovery of abandoned plant is limited to any abandoned plant recovery authorized by FERC.

C Includes only CWIP authorized by the Commission for inclusion in rate base. The annual report filed pursuant to Section 7 of the Protocols will include for each project under construction (i) the CWIP balance eligible for inclusion in rate base; (ii) the CWIP balance ineligible for inclusion in rate base; and (iii) a demonstration that AFUDC is only applied to the CWIP balance that is not included in rate base. The annual report will reconcile the project-specific CWIP balances to the total Account 107 CWIP balance reported on p. 216.b of the FERC Form 1.

D ADIT and Accumulated Deferred Income Tax Credits are computed using the average of the beginning of the year and the end of the year balances.

E Recovery of a Regulatory Asset is subject to FERC approval before the amortization of the Regulatory Asset can be included in rates

F Unamortized Abandoned Plant and Amortization of Abandoned Plant will be zero until the Commission accepts or approves recovery of the cost of abandoned plant.

G The Formula Rate shall include a credit to rate base for all unfunded reserves (funds collected from customers that (1) have not been set aside in a trust, escrow or restricted account; (2) whose balance are collected from customers through cost accruals to accounts that are recovered under the Formula Rate; and (3) exclude the portion of any balance offset by a balance sheet account). Each unfunded reserve will be included on lines 30 above. The allocator in Col. (g) will be the same allocator used in the formula for the cost accruals to the account that is recovered under the Formula Rate. Since reserves can be created by an offsetting balance sheet account, rather than through cost accruals, the amount to be deducted from rate base should exclude the portion offset by another balance sheet account. At the time of filing Winfield does not have such unfunded reserves, but has created account 401132228 to

capture any unfunded reserve relating to transmission service that may occur in the future.

H Calculate monthly average balance for 13 months except year 1 of 7 months, except ADIT which is calculated based on the average of the beginning of the year and the end of the year balances

I Winfield has elected to forego allocation of General, Intangible, and Common Plant to transmission service. When the formula rate was implemented Winfield Electric General plant included no buildings. Winfield does allocate vehicles included in General Plant to transmission construction and O&M based on FEMA rates and reduces O&M for the portion of such charges reimbursed by GridLIance.

J Winfield not subject to income taxes - will remain zero unless income taxes become applicable

Note 2: Winfield has elected to forego allocation of General Plant to transmission service unless and until it implements separate accounting for General Plant depreciation used for the Electric function and the formula rate is changed pursuant to a filing at the FERC. Winfield has included an allowance for its payments in lieu of taxes (PILOT) to the City Fund and will not include any taxes of the types detailed here unless such is authorized by the FERC pursuant to a filing by

or on behalf of Winfield.

| 30 | Incremental Return and Income Taxes for 100 basis point increase in ROE divided by Rate Base | | | #DIV/0! |

Notes:

A Line 5 includes a 100 basis point increase in ROE that is used only to determine the increase in return and income taxes associated with a 100 basis point increase in ROE. Any actual ROE incentive must be approved by the Commission. For example, if the Commission were to grant a 137 basis point ROE incentive, the increase in return and taxes for a 100 basis point increase in ROE would be multiplied by 1.37 on Attachment 1 column 12.

B The Tax Effect of Permanent Differences captures the differences in the income taxes due under the Federal and State calculations and the income taxes calculated in Attachment H that are not the result of a timing difference

**Attachment 6 Project Revenue Requirement Worksheet Kansas Power Pool - Winfield**

To be completed in conjunction with Attachment H.

Note Letter

A Gross Transmission Plant is that identified on page 2 line 2 of Attachment H

B Inclusive of any CWIP or unamortized abandoned plant included in rate base when authorized by FERC order less any prefunded AFUDC, if applicable.

C Project Gross Plant is the total capital investment for the project calculated in the same method as the gross plant value in line 1. This value includes subsequent capital investments required to maintain the facilities to their original capabilities. Gross plant does not include Unamortized Abandoned Plant.

D Project Net Plant is the Project Gross Plant Identified in Column 3 less the associated Accumulated Depreciation. Net Plant includes CWIP and Unamortized Abandoned Plant and excludes any regulatory asset, which are to entered as a separate line item.

E Project Depreciation Expense is the actual value booked for the project and included in the Depreciation Expense in Attachment H, page 3, line 16. Project Depreciation Expense includes the amortization of Abandoned Plant

F True-Up Adjustment is calculated on the Project True-up Schedule for the Rate Year

G The Net Rev Req is the value to be used in the SPP's rate calculation under the applicable Schedule under the SPP OATT for each project.

| | |
|---|---|
| H | The Total General, Intangible and Common Depreciation Expense excludes any depreciation expense directly associated with a project and thereby included in page 2 column 9. |
| I | The Unamortized Abandoned Plant balance is included in Net Plant, and Amortization of Abandoned Plant is included in Depreciation/Amortization Expense. |
| J | The discount is the reduction in revenue, if any, that the company agreed to, for instance, to be selected to build facilities as the result of a competitive process and equals the amount by which the annual revenue requirement is reduced from the ceiling rate |
| K | Requires approval by FERC of incentive return applicable to the specified project(s) |
| M | All facilities other than those being recovered under Schedules 7, 8, 9 are to be included in Attachment 1. |
| N | Facilities that provide Wholesale Distribution Service are not to be listed as projects on lines 15, the revenue requirements associated with these facilities are calculated on Attachment 11 |
| O | When an updated projected net revenue requirement is posted due to an asset acquisition as provided for in the Protocols, the difference between the updated net revenue requirement in Col (16) and the revenues collected to date will be recovered over the remaining months of the Rate Year. |
| P | PILOT = Payment in Lieu of Taxes Factor = 1-(PILOT Rate/(1-PILOT Rate)), where PILOT Rate = PILOT Allowance in Formula Rate Inputs page. |

| | |
|---|---|
| Monthly Interest Rate | - |
| Interest Income (Expense) | - |

Notes:
1) From Attachment 6, col. 15 for the projection for the Rate Year.
2) From Attachment 6, line 17.ia, col. 14 for that project based on the actual costs for the Rate Year.
3) The "Revenue Received" on line 2, Col. (E), is the total amount of revenue distributed to KPP in the year being trued-up for Winfield transmission, excluding any True-Up revenues.
Column E, lines 3 are the dollar amounts of Revenue Received reflecting the % in Column D. This assigns to each project a percentage of the revenue received based on the percentage of the Projected Net Revenue Requirement in Column C.
4) Prior Period Adjustment from line 5 is pro rata to each project, unless the error was project specific.
5) Interest from Attachment 8.

**Prior Period Adjustment**

| | (a) | (b) | (c) | (d) |
|---|---|---|---|---|
| | Prior Period Adjustment (Note B) | Amount In Dollars | Interest Note B | Total Col. (b) + Col. (c) |
| 5 | - | - | - | - |

Notes:

A For each project or Attachment H, the utility will populate the formula rate with the inputs for the True-Up Year. The revenue requirements, based on actual operating results for the True-Up Year, associated with the projects and Attachment H will then be entered in Col. (F) above. Column (E) above contains the actual revenues received associated with Attachment H and any Projects paid by SPP to the utility during the True-Up Year. Then in Col. (G), Col. (E) is subtracted from Col. (F) to calculate the True-up Adjustment. The Prior Period Adjustment from Line 5 below is input in Col. (H). Column (I) is the applicable interest rate from Attachment 6. Column (I) adds the interest on the sum of Col.(G) and (H). Col. (J) is the sum of Col. (G), (H), and (I).

B Prior Period Adjustment is the amount of an adjustment to correct an error in a prior period. The FERC Refund interest rate specified in CFR 35.19(a) for the period up to the date the projected rates that are subject to True Up here went into effect.

| Note Letter | |
|---|---|
| A | There will be zero PBOP expenses in the KPP-Winfield rates until KPP files for recovery of its PBOP expenses. |

**Kansas Power Pool ("KPP")**

**Attachment A – KPP**

**ANNUAL TRUE-UP, INFORMATION EXCHANGE,**

**AND CHALLENGE PROCEDURES**

## Section I. Applicability

The following procedures shall apply to KPP's calculation of its actual net revenue requirement, True-Up Adjustment, and projected net revenue requirement. The project-specific annual revenue requirements, if any, determined under the KPP formula are "up to" rates, i.e., ceiling rates, and permit KPP to discount the revenue requirement to the extent necessary to reflect the result of any cost commitment to SPP. In the Formula Rate Template, the effect of any such discount is removed from the projected revenue requirement and the actual revenue requirement, which ensures that customers receive the benefits of any discount.

## Section II. Annual True-Up and Projected Net Revenue Requirement

A. Beginning on or before September 1 of the year following FERC's acceptance of these protocols in the SPP Tariff, and on or before each subsequent September 1, KPP shall determine the Annual True-Up under this Attachment H - KPP and Section VII of these protocols, to derive a True-Up Adjustment to be included in KPP's projected net revenue requirement for the subsequent calendar year (the "Rate Year").

B. On or before September 1 of the year following FERC's acceptance of these protocols in the SPP Tariff, and on or before each subsequent September 1, KPP shall provide the Annual True-Up, actual net revenue requirement, and True-Up Adjustment to SPP and cause such information to be posted on the SPP website. Within ten (10) days of such posting, KPP shall provide notice of such posting via the email exploder list. Interested Parties shall contact KPP at the following email address to be placed on the exploder list: regulatorynotices@kpp.agency.

C. On or before October 1, of the year following FERC's acceptance of these protocols in the SPP Tariff, and on or before each subsequent October 1, KPP shall provide the projected net revenue requirement to SPP and cause such information to be posted on the SPP website. Within ten (10) days of posting of the projected net revenue requirement, KPP shall provide notice of such posting to the email exploder list.

D. If the date for posting the Annual True-Up or the projected net revenue requirement falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day. The date on which posting of the Annual True-Up occurs shall be that year's "Publication Date." Any delay in the Publication Date or in the posting of the projected net revenue requirement will result in an equivalent extension of time for the submission of Information Requests discussed in Section III of these protocols and for challenge procedures discussed in Section IV of these protocols.

E. The Annual True-Up shall:

1. Include a workable populated Formula Rate Template and underlying workpapers in native format with fully functional spreadsheets showing the calculation of the net revenue requirement;

2. Have components that are based on Winfield's Comprehensive Annual Financial Reports, specifically the Electric Utility sections ("Winfield Financials"), and Gridliance High Plains, LLC's ("GLHP") FERC Form No. 1 reports for the prior calendar year;

3. Provide the formula rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used in the Annual True-Up that are not otherwise available in the Winfield Financials and GLHP FERC Form No. 1 reports;[1]

4. Provide sufficient information to enable Interested Parties (as that term is defined in Section II.G of these protocols) to replicate the calculation of the Annual True-Up results from the Winfield Financials and GLHP FERC Form No. 1 reports;

5. Identify any changes in the formula references (page and line numbers) to the Winfield Financials and GLHP FERC Form No. 1 reports;

6. Identify all material adjustments made to the Winfield Financials and GLHP FERC Form No. 1 report data in determining formula inputs, including relevant footnotes to the GLHP FERC Form No. 1 reports and any adjustments not shown in the GLHP FERC Form No. 1 reports;

---

[1] It is the intent of the formula rate, including the supporting explanations and allocations described therein, that each input to the formula rate will be either taken directly from the Winfield Comprehensive Annual Financial Reports, including the Electric Utility Sections, and GLHP FERC Form No. 1 or reconcilable to the Winfield Comprehensive Annual Financial Reports, including the Electric Utility Sections or FERC Form No. 1 by the application of clearly identified and supported information. If the referenced form is superseded, the successor form(s) shall

be utilized and supplemented as necessary to provide equivalent information as that provided in the superseded form. If the referenced form(s) is (are) discontinued, equivalent information as that provided in the discontinued form(s) shall be utilized.

7. Provide underlying data for formula rate inputs that provide greater granularity than is required for the Winfield Financials and GLHP FERC Form No. 1 reports;

8. With respect to any change in accounting that affects inputs to the formula rate or the resulting charges billed under the formula rate ("Accounting Change"):

   a. Identify any Accounting Changes, including:

      i. the initial implementation of an accounting standard or policy;

      ii. the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;

      iii. correction of errors and prior period adjustments that impact the True-Up Adjustment calculation; and

      iv. the implementation of new estimation methods or policies that change prior estimates;

   b. Identify items included in the Annual True-Up at an amount other than on a historic cost basis (e.g., fair value adjustments);

   c. Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs to the Annual True-Up;

   d. Provide, for each item identified pursuant to items II.E.8.a - II.E.8.c of these protocols, a narrative explanation of the individual impact of such changes on the True-Up Adjustment.

F. The projected net revenue requirement shall:

1. Include a workable populated Formula Rate Template and underlying workpapers in native format with fully functional spreadsheets showing the calculation of the net revenue requirement;
2. Provide the formula rate calculations and all inputs thereto, as well as supporting documentation and workpapers for data that are used in the projected net revenue requirement;
3. Provide sufficient information to enable Interested Parties (as that term is defined in Section II.G of these protocols) to replicate the calculation of the projected net revenue requirement;
4. With respect to any change in accounting that affects inputs to the formula rate or the resulting charges billed under the formula rate ("Accounting Change"):
    a. Identify any Accounting Changes, including:
        i. the initial implementation of an accounting standard or policy;
        ii. the initial implementation of accounting practices for unusual or unconventional items where FERC has not provided specific accounting direction;
        iii. correction of errors and prior period adjustments that impact the projected net revenue requirement calculation; and
        iv. the implementation of new estimation methods or policies that change prior estimates;
    b. Identify items included in the projected net revenue requirement at an amount other than on a historic cost basis (e.g., fair value adjustments);

c. Identify any reorganization or merger transaction during the previous year and explain the effect of the accounting for such transaction(s) on inputs to the projected net revenue requirement; and

d. Provide, for each item identified pursuant to items II.F.4.a - II.F.4.c of these protocols, a narrative explanation of the individual impact of such changes on the projected net revenue requirement.

G. KPP shall hold an open meeting among Interested Parties ("Annual True-Up Meeting") with remote access in conjunction with KPP's Annual Projected Rate Meeting since the date of the Annual True-Up posting and Annual Projected Rate posting are so close together in time[2]. This meeting will be held jointly with GLHP. No less than seven (7) days prior to such Annual True-Up Meeting, KPP shall cause notice to be provided on SPP's internet website of the time, date, and location of the Annual True-Up Meeting and

KPP shall provide notice of such meeting to the email exploder list. For purposes of these procedures, the term Interested Party includes, but is not limited to, customers under the Tariff, state utility regulatory commissions, consumer advocacy agencies, and

---

[2] Due to time constraints regarding the timing of the completion of the audited financial reports of the various governmental and business type subdivisions necessary for completion and issuance of the City of Winfield Comprehensive Annual Financial Report, the Annual True-Up will not be completed and available until September 1. As some of the information in KPP's formula rate is derived from GLHP information, GLHP has agreed to coordinate its Annual Projected Rate Meeting with KPP's Annual Projected Rate Meeting and will participate in both meetings.

state attorneys general. The Annual True-Up Meeting shall (i) permit KPP to explain and clarify its Annual True-Up and True-Up Adjustment and (ii) provide Interested Parties an opportunity to seek information and clarifications from KPP about the Annual True-Up and True-Up Adjustment.

H. KPP shall hold an open meeting among Interested Parties ("Annual Projected Rate Meeting") with remote access between the date that the projected net revenue requirement is posted to the SPP website (as described in Section II.C of these protocols) and October 31. This meeting will be held in conjunction with the Annual True-Up meeting and will be held jointly with GLHP. No less than seven (7) days prior to such Annual Projected Rate Meeting, KPP shall cause notice to be provided on SPP's internet website of the time, date, and location of the Annual Projected Rate Meeting and KPP shall provide notice of such meeting to the email exploder list. The Annual Projected Rate Meeting shall (i) permit KPP to explain and clarify its projected net revenue requirement and (ii) provide Interested Parties an opportunity to seek information and clarifications from KPP about the projected net revenue requirement.

I. Each year KPP shall endeavor to coordinate with other Transmission Owners in the SPP using formula rates to establish revenue requirements for recovery of the costs of transmission projects that utilize the same regional cost-sharing mechanism and hold a joint informational meeting to enable all Interested Parties to understand how those transmission owners are implementing their formula rates for recovering the costs of such projects.

**Section III. Information Exchange Procedures**

Each Annual True-Up and projected net revenue requirement shall be subject to the following information exchange procedures ("Information Exchange Procedures"):

A. Interested Parties shall have until February 1 following the Publication Date (unless such period is extended with the written consent of KPP or by FERC order) to serve reasonable information and document requests on KPP ("Information Exchange Period"). If February 1 falls on a weekend or a holiday recognized by FERC, the deadline for submitting all information and document requests shall be extended to the next business day. Such information and document requests shall be limited to what is necessary to determine:

(1) the extent or effect of an Accounting Change;

(2) whether the Annual True-Up or projected net revenue requirement fails to include data properly recorded in accordance with these protocols;

(3) the proper application of the formula rate and procedures in these protocols;

(4) the accuracy of data and consistency with the formula rate of the calculations shown in the Annual True-Up or projected net revenue requirement;

(5) the prudence of actual costs and expenditures;

(6) the effect of any change to the underlying Uniform System of Accounts, Winfield's Financials, or the FERC Form No. 1 reports of GLHP; or

(7) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

The information and document requests shall not otherwise be directed to ascertaining whether the formula rate is just and reasonable.

B. KPP shall make a good faith effort to respond to information and document requests within ten (10) business days of receipt of such requests. KPP shall respond to all information and document requests by no later than February 10 following the Publication Date, unless the Information Exchange Period is extended by KPP or FERC.

C. KPP will cause to be posted on the SPP website all information requests from Interested Parties and KPP's response(s) to such requests; except, however, if responses to information and document requests include material deemed by KPP to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by KPP and the requesting party.

D. KPP shall not claim that responses to information and document requests provided pursuant to these protocols are subject to any settlement privilege, in any subsequent FERC proceeding addressing KPP's Annual True-Up or projected net revenue requirement.

**Section IV. Challenge Procedures**

A. Interested Parties shall have until February 28 following the Publication Date (unless such period is extended with the written consent of KPP or by FERC order) to review the inputs, supporting explanations, allocations, and calculations and to notify

KPP in writing, which may be made electronically, of any specific Informal Challenges to the Annual True-Up or projected net revenue requirement. The period of time from the Publication Date until February 28 shall be referred to as the Review Period. If February 28 falls on a weekend or a holiday recognized by FERC, the deadline for submitting all Informal Challenges shall be extended to the next business day. Failure to pursue an issue through an Informal Challenge or to lodge a Formal Challenge regarding any issue as to a given Annual True-Up or projected net revenue requirement shall bar pursuit of such issue with respect to that Annual True-Up or projected net revenue requirement, but shall not bar pursuit of such issue or the lodging of a Formal Challenge as to such issue as it relates to a subsequent Annual True-Up or projected net revenue requirement.

B. A party submitting an Informal Challenge to KPP must specify the inputs, supporting explanations, allocations, calculations, or other information to which it objects, and provide an appropriate explanation and documents to support its challenge. KPP shall make a good faith effort to respond to any Informal Challenge within twenty (20) business days of notification of such challenge. KPP, and where applicable, the Transmission Provider, shall appoint a senior representative to work with the party that submitted the Informal Challenge (or its representative) toward a resolution of the challenge[3]. If KPP disagrees with such challenge, KPP will provide the Interested

---

[3] It may be appropriate and necessary for GLHP to participate in such Information Challenge process if the challenge relates to information derived from the GLHP Formula Rate.

Party(ies) with an explanation supporting the inputs, supporting explanations, allocations, calculations, or other information. No Informal Challenge may be submitted after February 28, and KPP must respond to all Informal Challenges by no later than March 31, unless the Review Period is extended by KPP or FERC.

C. Informal Challenges shall be subject to the resolution procedures and limitations in this Section IV. Formal Challenges shall be filed pursuant to these protocols and shall satisfy all of the following requirements.

(1) A Formal Challenge shall:

(a) Clearly identify the action or inaction which is alleged to violate the filed rate formula or protocols;

(b) Explain how the action or inaction violates the filed rate formula or protocols;

(c) Set forth the business, commercial, economic, or other issues presented by the action or inaction as such relate to or affect the party filing the Formal Challenge, including:

(i) the extent or effect of an Accounting Change;

(ii) whether the Annual True-Up or projected net revenue requirement fails to include data properly recorded in accordance with these protocols;

(iii) the proper application of the formula rate and procedures in these protocols;

(iv) the accuracy of data and consistency with the formula rate of the charges shown in the Annual True-Up or projected net revenue requirement;

(v) the prudence of actual costs and expenditures;

(vi) the effect of any change to the underlying Uniform System of Accounts, Winfield Financials, or FERC Form 1 of GLHP; or

(vii) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula;

(d) Make a good faith effort to quantify the financial impact or burden (if any) created for the party filing the Formal Challenge as a result of the action or inaction;

(e) State whether the issues presented are pending in an existing Commission proceeding or a proceeding in any other forum in which the filing party is a party, and if so, provide an explanation why timely resolution cannot be achieved in that forum;

(f) State the specific relief or remedy requested, including any request for stay or extension of time, and the basis for that relief;

(g) Include all documents that support the facts in the Formal Challenge in possession of, or otherwise attainable by, the filing party, including, but not limited to, contracts and affidavits; and

(h) State whether the filing party utilized the Informal Challenge procedures described in these protocols to dispute the action or inaction raised by the Formal Challenge, and, if not, describe why not.

(2) Service. Any person filing a Formal Challenge must serve a copy of the Formal Challenge on KPP. Service to KPP must be simultaneous with filing at the Commission. Simultaneous service can be accomplished by electronic mail in

accordance with § 385.2010(f)(3), facsimile, express delivery, or messenger. The party filing the Formal Challenge shall serve the individual listed as the contact person on KPP's Informational Filing required under Section VI of these protocols.

D. Informal and Formal Challenges shall be limited to all issues that may be necessary to determine: (1) the extent or effect of an Accounting Change; (2) whether the Annual True-Up or projected net revenue requirement fails to include data properly recorded in accordance with these protocols; (3) the proper application of the formula rate and procedures in these protocols; (4) the accuracy of data and consistency with the formula rate of the calculations shown in the Annual True-Up and projected net revenue requirement; (5) the prudence of actual costs and expenditures; (6) the effect of any change to the underlying Uniform System of Accounts, Winfield Financials, or the GLHP FERC Form No. 1 reports; or (7) any other information that may reasonably have substantive effect on the calculation of the charge pursuant to the formula.

E. KPP will cause to be posted on the SPP website all Informal Challenges from Interested Parties and KPP's response(s) to such Informal Challenges; except, however, if Informal Challenges or responses to Informal Challenges include material deemed by KPP to be confidential information, such information will not be publicly posted but will be made available to requesting parties pursuant to a confidentiality agreement to be executed by KPP and the requesting party.

F. Any changes or adjustments to the True-Up Adjustment or projected net revenue requirement resulting from the Information Exchange and Informal Challenge processes that are agreed to by KPP will be reported in the Informational Filing required pursuant to Section VI of these protocols. Any such changes or adjustments agreed to by KPP on or before December 1 will

be reflected in the projected net revenue requirement for the upcoming Rate Year. Any changes or adjustments agreed to by KPP after December 1 will be reflected in the following year's Annual True-Up, as discussed in Section V of these protocols.

G. An Interested Party shall have until May 15 following the Review Period (unless such date is extended with the written consent of KPP to continue efforts to resolve the Informal Challenge) to make a Formal Challenge with FERC, which shall be served on KPP on the date of such filing as specified in Section IV.C(2) above. A Formal Challenge shall be filed in the same docket as KPP's Informational Filing discussed in Section VI of these protocols. KPP shall respond to the Formal Challenge by the deadline established by FERC. A party may not pursue a Formal Challenge if that party did not submit an Informal Challenge on any issue during the applicable Review Period.

H. In any proceeding initiated by FERC concerning the Annual True-Up or projected net revenue requirement or in response to a Formal Challenge, KPP shall bear the burden, consistent with section 205 of the Federal Power Act, of proving that it has correctly applied the terms of the formula rate consistent with these protocols, and that it followed the applicable requirements and procedures in this Attachment H - KPP. Nothing herein is intended to alter the burdens applied by FERC with respect to prudence challenges.

I. Except as specifically provided herein, nothing herein shall be deemed to limit in any way the right of KPP to file unilaterally, pursuant to Federal Power Act section 205 and the regulations thereunder, to change the formula rate or any of its inputs (including, but not limited to, rate of return and transmission incentive rate treatment), or to replace the formula rate with a

stated rate, or the right of any other party to request such changes pursuant to section 206 of the Federal Power Act and the regulations thereunder.

J. No party shall seek to modify the formula rate under the Challenge Procedures set forth in these protocols and the Annual True-Up or projected net revenue requirement shall not be subject to challenge by anyone for the purpose of modifying the formula rate. Any modifications to the formula rate will require, as applicable, a Federal Power Act section 205 or section 206 filing.

K. Any Interested Party seeking changes to the application of the formula rate due to a change in the Uniform System of Accounts, Winfield Financials, or GLHP FERC Form No. 1, shall first raise the matter with KPP in accordance with this Section IV before pursuing a Formal Challenge.

**Section V. Changes to True-Up Adjustment or Projected Net Revenue Requirement**

Except as provided in Section IV.F of these protocols, any changes to the data inputs, including, but not limited to, revisions to Winfield's Financials or GLHP's FERC Form No. 1 reports, or as the result of any FERC proceeding to consider the Annual True-Up or projected net revenue requirement, or as a result of the procedures set forth herein, shall be incorporated into the formula rate and the charges produced by the formula rate in the projected net revenue requirement for the next Rate Year. This reconciliation mechanism shall apply in lieu of mid-Rate Year adjustments. Interest on any refund or surcharge shall be calculated in accordance with the procedures outlined in Section VII of these protocols.

**Section VI. Informational Filings**

A. By April 15 of each year, KPP shall submit to FERC an informational filing ("Informational Filing") of their projected net revenue requirement for the Rate Year, including their Annual True-Up and True-Up Adjustment. This Informational Filing must:

(1) Include the information that is reasonably necessary to determine: (i) that input data under the formula rate are properly recorded in any underlying workpapers; (ii) that KPP has properly applied the formula rate and these procedures; (iii) the accuracy of data and the consistency with the formula rate of the Transmission Revenue Requirement under review; (iv) the extent of accounting changes that affect formula rate inputs; and (v) the reasonableness of projected costs.

(2) If there have been any changes to GLHP's affiliate cost allocation that impacts KPP's formula rate, include for the applicable Rate Year the following information from GLHP related to affiliate cost allocation: (i) a detailed description of the methodologies used to allocate and directly assign costs between GLHP and its affiliates by service category or function, including any changes to such cost allocation methodologies from the prior year, and the reasons and justification for those changes; and (ii) the magnitude of such costs that have been allocated or directly assigned between GLHP and each affiliate by service category or function; and

(3) Describe any corrections or adjustments made during that period, and must describe all aspects of the formula rate or its inputs that are the subject of an ongoing dispute under the Informal or Formal Challenge procedures. Within five (5) days of such Informational Filing, KPP shall provide notice of the Informational Filing via the email exploder list and shall cause SPP to post the docket number assigned to KPP's Informational Filing on the SPP website.

B. Any challenges to the implementation of the Attachment H - KPP formula rate must be made through the Challenge Procedures described in Section IV of these protocols or in a separate complaint proceeding, and not in response to the Informational Filing.

**Section VII. Calculation of True-Up Adjustment**

The True-Up Adjustment is developed on Attachment 7 and will be determined in the following manner:

(1) Actual transmission revenues for the previous year will be compared to Net Revenue Requirement not including any prior year True-Up Adjustment calculated in accordance with KPP's Attachment H of this Tariff for the previous year using Winfield's Financials and GLHP's FERC Form No. 1 for that same year to determine any over or under recovery, as well as any other appropriate documentation from KPP ("True-Up Adjustment"). KPP shall cause the True-Up Adjustment and related calculations to be posted to the SPP website no later than September 1 (or if that day falls on a weekend or a holiday recognized by FERC, then the posting shall be due on the next business day.

(2) Interest on any over recovery or under recovery of the net revenue requirement shall be determined on Attachment 8 of the formula rate. The interest rate to be applied to the over or under recovery amounts will be determined using the average interest rate for the twenty-one (21) months preceding October of the current year. In either case, the interest payable shall be calculated by applying the average interest rate to the over or under recovery in the revenue requirement or volume changes for the twenty-four (24) month period. The interest amount will be included in the projected costs made available on October 1 in accordance with Section II.C above.

(3) The Net Revenue Requirement for transmission services for the following Year shall be the sum of the projected revenue requirement for the following year, plus or minus the True-Up Adjustment from the previous year, if any, including interest, as explained above.

(4) KPP may accelerate the refund of any over recovery amounts by one year. The interest calculation will be adjusted to reflect the period the over recovery exists.

Note: General and Common plant are assigned to asset categories based on the appropriate allocation of future depreciation when placed in service. Electric general plant are assets that benefit more than one function within the electric system (i.e. Generation, Transmission, Distribution, and Metering). Common plant are assets that benefit more than one business unit of the Utility. The allocator explanations column, below, lists the different allocations methods that are currently setup. During the process of placing assets in service, each asset is analyzed to determine which allocator method is most appropriate for this asset. Any additions to lines 38, 39, or 83 of Worksheet D will require a Section 205 filing at FERC.

Allocator Explanations (may be updated Annually)

A - Transmission-only assets.

B - Assets shared equally between transmission and distribution.

C - Assets shared between transmission and distribution

D - Assets shared equally between

metering and distribution.
E - Assets shared equally between SurgePro and distribution.
F - Assets shared between transmission & distribution & metering & SpringNet
G - Assets shared between power generation, transmission , distribution
H - Allocated on the basis of direct labor charges to each business unit component.
I - This class is not currently used.
J - Allocated based on number of customers by business unit - attributed to distribution
K - The class is allocated on the basis of number of vehicles used in each business unit component.
L - Infrared Thermography assets
M - Allocated between Natural Gas & Water Operations.
N - Allocated to the metering departments (Meter & Service Center).
O - Allocated on the basis of Land & Structures Plant by business unit component.
P - Mainframe Computer assets
Q - Allocated on the basis of number of PCs in use by business unit component.
R - Allocated on the basis of City Utilities Operating Income

S - Allocated to the Water Source of Supply business unit component, associated with Lake Springfield.
T - Allocated to the Water Source of Supply business unit component, associated with Fellows Lake.
U - Allocated based on dispatch center usage
V - Operations Technology costs are allocated on the basis of labor dollars for business unit components benefiting from these projects.
W - Operations Technology costs are allocated by the number of laptops in service by business unit component.
X - Operations Technology costs are allocated to the electric distribution department.
Y - Operations Technology costs are allocated to the natural gas distribution department.
Z - Operations Technology costs are allocated to the water distribution department.
AA -Allocted based on number of work orders created by product in Job Order Tracking System.
BB - Allocated on the basis of total property insurance values, by business unit component.
CC - Assets shared between Telcom system and IT. IT portion is allocated to all business units based on allocator H (direct labor charges).
